Detailed Medical Report

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من		**بشأن تقرير طبي للمريض**	
بقسم:		**رقم طبي:**	

ننشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انه

The patient presented for administration of Zoladex 10.8 mg and was prescribed Femara with supportive therapy for a planned duration of three months.

The patient's pathology demonstrated estrogen receptor (ER) and progesterone receptor (PR) positivity at 7/8, HER2 negativity, and staging of pT0 pN0 M0 as of March 2023. Multidisciplinary discussion recommended a regimen of PORTH, an aromatase inhibitor, and Zoladex. The patient was started on Femara, supportive care, and Zoladex for three months.

The patient received a daycare infusion of Zometa and Zoladex. Laboratory studies performed externally showed serum creatinine of 0.8 mg/dL and ionized calcium of 1.18 mmol/L. The current plan is to continue Zoladex therapy and monitor renal function and calcium levels.

Pathology Report

Clinical Data :
Right breast cancer.

Nature of the specimen:
Slide revision.

Gross Examination:
• One block labelled by (5030/22), one block labelled by (4576/22) and five slides received.

Microscopic examination:
• Histological type: Invasive duct carcinoma.
• Grade (differentiation+ nuclear pleomorphism + mitosis): GII (3+2+1).
• Lymphovascular invasion:Couldnt detecteed in received biopsy.
• perineural invasion No.
• Ductal carcinoma in situ: yes .
• Cytology of axilla : Positive for malignant cells.(metastasis).
• IPT:

Examination of ER stained slide show intense nuclear staining in 60% of the tumor cells.
Examination of PR stained slide show intense nuclear staining in 60% of the tumor cells.
Examination of HER2 stained slide show weak in complete membranous staining in<10% of tumor cells.
SISH on the referred slide: Not amplified.
* Average Her2 copy no: 3.05.
* Her2/CEP17 ratio: 1.7.
The repeated SISH on the tissue material at :Not amplified.
* Average Her2 copy no: 2.
* Her2/CEP17 ratio: 1.33.

Pathology Report

Diagnosis:

Right breast cancer; Slide revision:

- Invasive duct carcinoma GII with insitu component.
- No lymphovascular invasion.
- No perineural invasion.
- Cytology of axilla : Positive for malignant cells (metastasis).
- IPT:

ER: Positive (score 7/8).
PR: Positive (score 7/8).
HER-2: Equivocal (score 2+)
SISH . Not amplified on the referred slide and the repeated one.

Pathology Report

CLINICAL DATA:
Right breast cancer, PSNA
NATURE OF SPECIMEN:
Right SM & RT SLN biopsy & RT extra-LNs
GROSS EXAMINATION:
• Procedure: Right simple mastectomy specimen measured 16x3x7cm with covering skin ellipse measured 14x7 cm .
• Tumor extent : An ill defined rubbery greyish white area
• Size: 5x3 cm
• Skin involvement: unremarkable grossly
• Distance from margins: 2.5cm away from deep margin
• Lymph nodes number and size: Fibrofatty tissue piece measured 3x2 cm enclosing 5 LNs up to 2x1 cm .
• Frozen section: Free SLNs (0/4)
MICROSCOPIC EXAMINATION:
• Complete pathological response in previously diagnosed IDC
• Skin involvement: Free nipple and areola
• Lymph node involvement: Free LNs (0/9)
• Resection Margins: Free deep margin
DIAGNOSIS:
Right Simple Mastectomy & RT SLN & RT extra-LNs biopsy :
• Complete pathological response in previously diagnosed IDC
• Free deep margin
• Free SLNs and ALNs (0/9) with evidance of therapy induced fibrosis
• Stage : pT0, pN0

WHOLE BODY ^{18}F-FDG PET/CT EXAMINATION

Clinical History

- A female patient 42 years old with history of right breast cancer.
- Pathologically proven invasive duct carcinoma
- For initial assessment .

Procedure:

- Using GE Discovery IQ simultaneous whole body 18F-FDG PET scan and multislice MSCT examination was performed from skull to lower thighs. Sixteen MSCT of the same level was performed for the purpose of attenuation correction, anatomical localization and diagnosis.
- Scan is done 1hour after IV contrast injection of 370MBq of 18 FDG.

Previous Exams:

❖ **No previous PET/CT study available for comparison.**

Findings:

I- BREAST AND AXILLARY REGIONS:

- **Low grade Metabolically active right breast parenchymal asymmetry densities / lesion is seen at right lower outer region; with SUVmax=2**
- **Few metabolically active right axillary LNs; the largest and most active is seen measuring 1.8cm in its maximum dimensions with SUVmax=2.6**
- No metabolically active left breast lesions.
- No metabolically active left axillary LNs.

PET Scan
[[DOCTYPE:PET_SCAN]]

Name: سهام لطفى صبح ايوب
Date : 08/31/2022
Pat. ID: 10270631

II- HEAD AND NECK:

- No metabolically active pharyngeal lesions.
- No metabolically active laryngeal lesions.
- Few subcentimetric bilateral upper deep cervical and submandibular LNs are seen showing no metabolic activity; likely non-specific.
- No metabolically active cervical lymphadenopathy.

III- CHEST:

- No metabolically active pulmonary nodules, masses, or cavitary lesions.
- No consolidation or collapse
- No metabolically active mediastinal lymphadenopathy.
- No pleural or pericardial effusion.

IV- ABDOMEN AND PELVIS

- Enlarged sized liver showing homogenous low parenchymal attenuation. No metabolically active hepatic focal lesions. No dilated biliary radicles.
- Both kidneys are normal site, average sized and showing smooth regular cortical outline and preserved parenchymal thickness. No stones or back pressure changes.
- Normal C.T appearance of the spleen, adrenal glands, pancreas, aorta and IVC.
- The urinary bladder shows no evidence of gross masses or stones.
- No metabolically active pelvic lesions.
- No metabolically active abdominal or pelvic lymphadenopathy
- No ascites.

V- MUSCLOSKELETON:

- **Few multifocal sclerotic patchy metabolically inert osseous lesions are seen involving the spine and pelvic bones.**
- **No metabolically active lesions could be detected.**
- Spondylodegenrative changes of the spine.

PET Scan
[[DOCTYPE:PET_SCAN]]

Name: سهام لطفي صبح ايوب
Date : 08/31/2022
Pat. ID: 10270631

OPINION:

- ✓ Low grade metabolically active right lower outer breast parenchymal asymmetric densities / neoplastic lesion; for pathological correlation.
- ✓ Metabolically active right axillary metastatic lymphadenopathy
- ✓ Metabolically inert few sclerotic osseous lesions, for close follow up.
- ✓ PET –CT follow up is advisable.
