إيماء للطلب المقدم من	بشأن تقرير طبي للمريض	
بقسم:	رقم طبي:	
تنتشر بأن توضح فيما يلي تقريراً عن حالته		
تاريخ وساعة الدخول :	تاريخ وساعة الخروج :	
وبعد الكشف والفحوصات والمناقشة وجد انه The patient is a 58-year-old individual with a history of right-sided breast cancer, clinical stage T3N0M0, invasive ductal carcinoma, grade 2, estrogen receptor 8/8 positive, progesterone receptor 4/8 positive, HER2 3+ positive. The patient underwent right-sided mastectomy on 5 November 2025 followed by radiation therapy (RT) with a surgical margin status of ypT1 ypN0/4 and an estimated ejection fraction of 66 % on 3 February 2025. Adjuvant therapy was initiated with KADCYLA 260 mg and ARIMIDEX. Subsequent treatment planning indicated continuation with KADCYLA and ARIMIDEX for cycle 4, followed by KADCYLA for cycle 5; with pharmacy coordination and a repeat echocardiogram scheduled. The pharmacy note on 9 April 2026 confirmed administration of cycle 5 KADCYLA 260 mg together with ARIMIDEX. On 30 April 2026 the patient attended a pharmacy visit for cycle 6 KADCYLA plus ARIMIDEX, and a new echocardiogram was ordered prior to the next cycle. On 23 May 2026 the patient's ejection fraction was documented at 62 % on 13 May 2026; the port was removed because KADCYLA was unavailable at that time. On 20 June 2026 the record indicated that KADCYLA remained unavailable, and the patient continued ARIMIDEX with supportive treatment. The pharmacy note on 28 June 2026 detailed preparation for cycle 7 KADCYLA 260 mg, addition of ANASTROZOLE, and a supportive echocardiogram, with the most recent ejection fraction still 62 %. On 9 August 2026 the patient was scheduled for cycle 9 KADCYLA; laboratory results were accepted, and ARIMIDEX with supportive therapy and a repeat echocardiogram were planned for the next visit. The pharmacy visit on 20 August 2026 recorded the patient's weight as 92 kg and confirmed administration of cycle 9 KADCYLA 260 mg with ANASTROZOLE; laboratory values from 9 August were accepted. On 9 September 2026 the ejection fraction was 66 %; dexamethasone was prescribed for osteoporosis prophylaxis, and the patient was prepared for cycle 10 KADCYLA 260 mg with ARIMIDEX and a proton pump inhibitor. The patient has now completed ten cycles of KADCYLA.

Pathology Report

Clinical data:
Breast mass.

Nature of specimen:
Slide and block revision.

Gross examination:

- Three paraffin blocks labelled by (8367-24), (505-25) and (1647-24).
- Six immunostained slides for (ER, PR, HR2 and three slides for HER2 ISH).
- Four referred films, two of which labeled by (1647-24) and other two labeled (1635-24).

Microscopic examination:

Slides and block labeled by (505-25):

- * Histological type: Invasive duct carcinoma .
- * Grade (differentiation +nuclear pleomorphism+mitosis): (3+2+1) Grade II .
- * DCIS: Minimal.
- * Angiolinvasion: Could not be detected within the limits of biopsy recieved
- * IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear reaction in 95% of tumor cells (score 8/8).
- PR: Weak nuclear reaction in <1% of tumor cells (score 2/8).
- Her2: Moderate complete membrane reaction in >10% of tumor cells (score 2+).
- SISH :Amplified, Her2 copy number:5.2, Her2/CEP 17: 4.2.

Slides and block labeled by (8367)

- * Histological type: Invasive duct carcinoma .
- * Grade (differentiation +nuclear pleomorphism+mitosis): (3+2+1) Grade II .
- * DCIS: Focal .
- * Angiolinvasion: Could not be detected within the limits of biopsy recieved.
- * Microcalcifications: Positive.

Pathology Report

Clinical Data: Right breast cancer, Post NACT.

Nature of Specimen: Referred slides (Right simple mastectomy & Sentinel lymph nodes biopsy).

Gross Examination:

Six referred slides were received labelled by (204870-25) & sublabelled from (A:F).

Microscopic examination:

- Histological type: Residual viable invasive duct carcinoma (Cellularity 40%).
- Grade 2 (differentiation 3, nuclear pleomorphism 2, mitosis 2).
- Ductal carcinoma in situ: Absent
- Angiolinvasion: Absent.
- Perineural invasion: Absent.
- Nipple and areola: Free.
- Deep margin: Free.
- Sentinel lymph nodes: Four lymph nodes with no metastatic deposits, (0/4).
- Histologic response to therapy: Pathologic partial response to therapy.

Diagnosis:

Right breast cancer (Post-NACT), Referred slides (Right simple mastectomy & Sentinel lymph nodes biopsy):

Residual viable invasive duct carcinoma, Grade 2 (Cellularity 40%).

- Ductal carcinoma in situ: Absent.
- Nipple and areola: Free.
- Deep margin: Free.
- Sentinel lymph nodes: Four lymph nodes with no metastatic deposits, (0/4).

** N.B; For proper staging & calculation of tumor cancer burden, please refer to the original report.

Clinical Information

Rt breast simple mastectomy and sentinel lymph node biopsy for a mass previously diagnosed as invasive duct carcinoma (path.no. SUR24-8367), post chemotherapy.

Gross Picture

Received two formalin-fixed specimen, labeled with the patient's name, MRN and "laterality RT".

(1)-Rt. simple mastectomy specimen (21×15 cm) with a two sutures "long=lateral" & "short=superior", covered by skin ellipse (19×12 cm), that included unremarkable nipple. Serial sections showed a rubbery white area (8×7 cm) including firm white mass (1.5×1 cm), located at (U.I.Q), 1 cm from the skin and 2.7 cm from the deep margin. The rest of the breast tissue is thick and white.

(2)-RT. SLN: four lymph nodes, the largest one was 1×0.7 cm. (N.S)

Microscopic Picture

Sections examined revealed wide areas of fibrohyalinosis around foci of viable invasive duct carcinoma, grade 2 with overall tumour viability of 20%. No evidence of in-situ component. No lymphovascular emboli detected. Nipple is free of tumour cells and Paget's disease. Least deep margin of excision is negative for tumour spread. All four dissected lymph nodes are negative for metastatic spread (0/4).

Assessment of tumour response to neoadjuvant chemotherapy : Tumour viability :

20%, Residual Cancer Burden class : II, Residual Cancer Burden Index : 2.229

[DOCTYPED PATHOLOGY REPORT]

Patient Name: Eman Mohamed Fekry Mahmoud Mohamed	Date : 13/07/2025
Exam : MAMMOGRAPHY BOTH	Age : 58 Year(s)
Medical ID: 326/2025	Pat. ID: 99378

Bilateral Digital soft tissue mammography with high-resolution breast sonography revealed:

Clinical summary: 58 years old female, underwent neoadjuvant chemotherapy and targeted therapy for pathologically proved right IDC. Post-NACT re-evaluation study.

Findings:

Right breast:

- Heterogeneously dense breast parenchyma that may obscure small lesions (ACR c).
- Upper central middle third architectural distortion with overlying segmental suspicious microcalcifications overlying and area measuring 32 x 11 mm seen till mm from nipple with no definite speculations or masses.
- Ultrasound demonstrated heterogeneous breast with mottled appearance.
- Upper central, middle third area of parenchymal distortion with no definite masses. Anterior to such area few prominent ducts are noted not exceeding 3 mm in caliber with microcalcifications seen within, yet with no abnormal vascularity on color Doppler study; such changes were detected till 6 mm from nipple.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Left breast:

- Heterogeneously dense breast parenchyma that may obscure small lesions (ACR c).
- No speculations, masses asymmetry, distortion or suspicious microcalcifications.
- Few scattered rounded benign macrocalcifications.
- Ultrasound demonstrated heterogeneous breast parenchyma with mottled appearance with no solid or cystic lesions.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Conclusion:-

Right breast (BIRADS 6): Complete radiological response of 12 o'clock malignant mass lesion with still noted suspicious microcalcifications as described.

Left breast (BIRADS 2): breast adenosis with scattered benign calcifications.

Best Regards,
DR. Amal Hegazi, M.Sc.

BIRADS classification of breast lesions according to the American College of Radiology used for breast assessment combined with recommendations:

Category & recommendations	Suspected Cancer Risk
BIRADS 0: Non-informative study.	
BIRADS 1: Normal study, routine screening	0 %
BIRADS 2: Benign findings, routine screening	0 %
BIRADS 3: Probably benign, for close follow up.	2 %
BIRADS 4: Probably malignant, for biopsy.	50 %
A: mild suspicion.	
B: moderate suspicion.	
C: high suspicion.	
BIRADS 5: Malignant, for biopsy.	
BIRADS 6: Pathologically proven malignant	98-100%

Pathology Report

Clinical data:

Breast mass.

Nature of specimen:

Slide and block revision.

Gross examination:

Three paraffin blocks labelled by (8367-24), (505-25) and (1647-24).

Six immunostained slides for (ER, PR, HR2 and three slides for HER2 ISH).

- Four referred films, two of which labeled by (1647-24) and other two labeled (1635-24).

Microscopic examination:

Slides and block labeled by (505-25):

* Histological type: Invasive duct carcinoma.* Grade (differentiation +nuclear pleomorphism+mitosis): (3+2+1) Grade II.

* DCIS: Minimal.

* Angioinvasion: Could not be detected within the limits of biopsy recieved

* IPT (Positive control showed appropriate reactivity):

- ER: Strong nuclear reaction in 95% of tumor cells (score 8/8).

- PR: Weak nuclear reaction in <1% of tumor cells (score 2/8).

- Her2: Moderate complete membrane reaction in >10% of tumor cells (score 2+).

- SISH :Amplified, Her2 copy number 5.2, Her2/CEP 17: 4.2.

Slides and block labeled by (8367)

* Histological type: Invasive duct carcinoma.* Grade (differentiation +nuclear pleomorphism+mitosis): (3+2+1) Grade II.

* DCIS: Focal.

* Angioinvasion: Could not be detected within the limits of biopsy recieved.

* Microcalcifications: Positive.

CYTOPATHOLOGY

(Cytology - 1 Site) فحص خلوي (1 موقع)

Specimen Id	2412260002	Collection Date	26/12/2024 08:18 AM
Accession No	CYT024-1647	Received Date	26/12/2024 08:18 AM
Sample Type	Fluid/ Smear	Doctor	MOHAMMED FAWZEY AHMED MOHAMMED SALEM

Nature of Specimen:

Rt. Axillary Indeterminate lymph node, US guided FNAC.

Gross Picture:

Received 4 unstained smears slides, Pap-stained. One cell block received, H&E-stained.

Microscopic Picture:

Smears and cell block are hypocellular show reactive lymphocytes at different stages of maturation with scattered tangible body macrophages. No atypical or malignant cells detected.

Diagnosis:

Rt. Axillary lymph node, US guided FNAC:

Hypocellular, consistent with reactive lymphoid cells. Negative for malignancy.

Comments:

Recommended for clinico-radiological correlation.

Category Code (LH)

C2: Benign: benign lymphoid cells

CONTRAST ENHANCED SPECTRAL MAMMOGRAPHY**INDICATION:**

- Rt breast pathologically proven IDC

TECHNIQUE:

- Contrast Enhanced Spectral Mammography CC and MLO views

REPORT:

- Contrast Enhanced Spectral Mammography showed mild symmetrical back ground parenchymal enhancement.
- Rt central outer 12 o'clock paraareolar mass showing moderate heterogenous mass enhancement; measured 1.8 x 2 cm with clumped non mass enhancement seen extending from the mass anteriorly to nipple periareolar region with overlying grouped microcalcification
- No lt breast mass or non mass enhancement.
- Normal skin thickness and contour.
- Normal Lt nipple areola complexes.

OPINION:

- Rt breast mass with suspicious enhancement pathologically proven IDC (BIRADS 6).
- No lt breast pathological mass or non mass enhancement (BIRADS 2)

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST,
ABDOMEN AND PELVIS WITH TRIPHASIC STUDY OF THE LIVER**

FINDINGS:

1- CHEST:

- Heterogenous nodular enhancement of the right breast parenchyma.
- Few bilateral subcentimetric axillary level I lymph nodes, the largest on the right side measuring about 12 X 10 mm.
- Few subcentimetric left supraclavicular lymph nodes, the largest on measuring about 4 mm.
- Few bilateral tiny millimetric pulmonary nodules most are calcified.
- No sizable pulmonary masses, areas of consolidation or cavitary lesions.
- No CT evidence of pathologically enlarged hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Average cardiac size.
- No pericardial effusion detected.

2- ABDOMEN AND PELVIS:

- Mildly enlarged liver harboring segment VI & VIII hypodense non enhancing focal lesions with CT attenuation value of about 10 HU. No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Calculus gall bladder with large radiodense stone measuring about 13 mm.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- Normal appearance of the pancreas, spleen, kidneys and adrenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- No pathologically enlarged abdominal or pelvic lymph nodes.
- No abdominal or pelvic masses or collections.

PATIENT: EMAN MOHAMMED FAKRY MAHMOUD, 10124255695, Female, 58 y

مركز هيئة العزم
شركة تشخيصية
مستشفى سويدي للتشخيص
بمبنى الأورام - قسم الأشعة المقطعية

- No sizable solid or cystic adnexal mass lesions.
- Prominent left ovarian vein with dilated tortuous left parametrial vessels associated narrow aorto-mesenteric distance measuring about 5 mm.

The revised bone window revealed:

1. No CT evidence of vertebral collapse or extra-osseous soft tissue component.
2. Right iliac bone and right L5 transverse process sclerotic foci.
3. Right hemisacralized L5 vertebra.
4. Bilateral sacroiliitis.

OPINION:

- *Heterogenous nodular enhancing right breast neoplastic parenchyma.*
- *Enlarged liver with segment VI & VIII hypodense non enhancing focal lesions, likely of benign nature "cyst".*
- *No suspicious pulmonary nodules.*
