

جوستاف روسي انترناشيونال - مصر (EPE) * طلب علاج أول مرة / متردد

إسم المريض ربيعاً : صباح وهيب يوسف مصطفى

العنوان : الاقواز

الحى / المدينة : الصف

المحافظة : الجيزة

تاريخ تسجيل الإستمارة : 30-09-2026

رقم البطاقة : 26312172100589 رقم التليفون : 01126755374

العمر (تاريخ الميلاد) : 17-12-1963 المهنة : ربه منزل

الإقرار

أقر انا الموقع أدناه انني لا اتمتع باي نظام علاج مثل :- التأمين الصحي-القوات المسلحة-الشرطة-الهيئات-المؤسسات او اي نظام يتعارض مع نظام العلاج علي نفقة الدولة- وسوف اتحمل كافة نفقات العلاج في حالة ثبوت غير ذلك

Name: صباح وهيب يوسف MR. : 1733	
Detailed Medical Report	
السيد	
تحية طيبة وبعد,,	
	إيماء للطلب المقدم من
	بقسم:
ننشرف بأن نوضح فيما يلي تقريراً عن حالته	
	تاريخ وساعة الدخول : تاريخ وساعة الخروج :
وبعد الكشف والفحوصات والمتابعة وجد انه The multidisciplinary team (MDT) documented that the patient had completed neoadjuvant chemotherapy with a complete pathological response. The treatment plan at that time included continuation with PHESGO and FEMARA, and the patient was noted to be on cycle 15 (C15) of PHESGO + FEMARA. The subsequent note indicated that the patient progressed to cycle 16 (C16) of PHESGO + FEMARA, with an echocardiogram performed on the same day, and then to cycle 17 (C17) of PHESGO, with pharmacy coordination noted. During a clinical pharmacy visit, the patient was recorded as receiving PHESGO + FEMARA in cycle 17 (C17) with an estimated efficacy (EF) of 63 % as of 2 March 2026. The oncology medical note reported that the patient complained of swelling in the mouth. On examination, there was swelling of the floor of the mouth at the site of the sub-mandibular duct, described as "mostly for us." On the most recent examination, a lesion was identified on the floor of the mouth, and a biopsy was planned along with a neck ultrasound for further evaluation. The current plan is to obtain tissue diagnosis of the oral lesion and assess cervical lymph nodes with ultrasound.

Pathology Report

Clinical Data: Left retro-areolar breast mass.

Nature of Specimen: Tru-cut biopsy, collected at 17/10/2024.

Gross Examination:

- Three grayish white tissue cores up to 2 cm, totally submitted.

Microscopic Examination:

- * Histological type: Invasive duct carcinoma.
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- * Ductal carcinoma in situ: Not detected.
- * Perineural invasion: Not detected.
- * Angioinvasion: Not detected.
- * Microcalcifications: Not detected.

Diagnosis:

Left retro-areolar breast mass., Tru-cut biopsy:

Invasive duct carcinoma., Grade II.

For further IHC (ER, PR, Her2, Ki67).

Pathology Report

Clinical Data: Left breast cancer (post NACT)
 Nature of the specimen: Left MRM

Gross Examination:

• Procedure: Left MRM

measured 24x20x7 cm with covering skin ellipse measured 22x20cm & attached axilla 9x6 cm.

• Tumor extent : A greyish white tumour bed site

• Size: 4x3x3 cm.

• Skin Involvement: Nipple & areola were unremarkable grossly.

• Distance from margins: 2 cm away from deep margin

• Lymph nodes number and size: 14 L.Ns up to 2x1 cm.

Endoscopic examination:

• Histological type: No residual viable tumor tissue detected

• Ductal carcinoma in situ: No

• Skin Involvement: Free nipple and areola

• Lymph node involvement: Free L.Ns (0/14)

• Resection Margins: Free deep margin

• Additional pathological findings: Positive microcalcification

• Histologic response to therapy: Pathologic Complete response

Diagnosis:

Left MRM (post NACT) :

No residual viable tumor tissue detected.

• Free deep margin

• Free nipple and areola

• Free L.Ns (0/14)

Pathologic Complete Response

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data:

Left breast retroareolar mass.

Nature of Specimen:

Tru-cut biopsy.

Technique:

Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:

IPT (Positive control showed appropriate reactivity):
ER: Moderate nuclear reaction in 40% of tumor cells (score 7/8).
PR: Moderate nuclear reaction in 10% of tumor cells (score 3/8).
Her2: Complete membrane reaction in >10% of tumor cells (score 3+).
Ki67: 25% nuclear reaction of tumor cells.

Conclusion:

Left breast retroareolar mass, Tru-cut biopsy:
Invasive duct carcinoma, Grade II.

DT:

ER: Positive (score 7/8).
PR: Positive (score 3/8).
Her2: Positive (score 3+).
Ki67: Positive in 25% of tumor cells.

Verified by :

Printing Date : 25/12/2024 11:37:34

IMMUNOHISTOCHEMISTRY REPORT

scoring system: "ER, PR"

CO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, %; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak; 2, intermediate; and 3, strong). Total score from 0 to 8.

scoring system: "Her2"

ference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Patient Name: Sabah Wahib Youssef Moustafa	Date: 15/10/2024
Exam: MAMMOGRAPHY BOTH	Age: 61 Year(s)
Medical ID: 26312172100589	Pat. ID: 90734

**DIGITAL BILATERAL SOFT TISSUE MAMMOGRAPHY AND
COMPLEMENTARY ULTRASOUND**

Indication:

Right breast palpable mass

Report:

- Left Breast:
 - Partially obscured high density spiculated mass is seen in the retro-areola region invading the nipple and ulcerating over the skin. It measures about 45x35mm. by U/S it is seen as a large irregular hypoechoic mass centered at 9 o'clock (extending into the surrounding tissue with intraductal extension reaching the nipple)
 - Another small suspicious mass is noted at 8O'clock measuring about 15x13mm
 - <3 Pathologically enlarged level I axillary LNs largest measures 15mm in TS diameter and 12mm cortical thickness.
 - No pathological enlarged infra or supraclavicular lymph nodes.
- Right Breast:
 - Scattered fibroglandular parenchyma (ACR b)
 - No suspicious micro calcifications or architectural distortion detected.
 - Complementary ultrasound no cystic or solid mass lesions.
 - Normal skin thickness, and nipple-areola complex with average caliber of the retro-areolar central ducts.
 - Nonspecific axillary LN.

Opinion:

- Left locally advanced breast malignant mass with ipsilateral axillary lymphadenopathy (BIRADS 5) for histopathological examination.
- Normal sonomammography of right breast (BIRADS 1)

Best regards,

Exam : ultrasound BREAST (BOTH SIDE)	Age : 61 Year(s)
Medical ID: 3933/2024	Pat. ID: 90734

BILATERAL BREASTS ULTRASOUND

Indication:

Left breast malignant mass on NACTH

Report:

- Left Breast:
 - Mild regressive course of the large irregular hypoechoic mass centered at 9 to 10 o'clock (extending into the surrounding tissue with intraductal extension reaching the nipple) measuring currently 23 X 49 mm.
 - Currently noted 8 to 9 o'clock area of altered parenchymal with intraductal tumoral extension.
 - Regression of the <3 Pathologically enlarged level I axillary LNs largest measures 11mm in TS diameter and 6 mm cortical thickness.
 - No pathological enlarged infra or supraclavicular lymph nodes.
- Right Breast:
 - Scattered fibroglandular parenchyma (ACR b)
 - No suspicious micro calcifications or architectural distortion detected.
 - Complementary ultrasound no cystic or solid mass lesions.
 - Normal skin thickness, and nipple-areola complex with average caliber of the retro-areolar central ducts.
 - Nonspecific axillary LN.

Opinion:

- Regressive course of the left locally advanced breast malignant mass and ipsilateral axillary lymphadenopathy (BIRADS 6).
- Normal sonomammography of right breast (BIRADS 1).

Dr. Mohamed Mohsen, M.D.

Exam : MAMMOGRAPHY BOTH	Age : 61 Year(s)
Medical ID: 3933/2024	Pat. ID: 90734

RIGHT BREAST MAMMOGRAPHY WITH BILATERAL US

Indication:

Left mastectomy

Technique

- right breast MLO and CC views
- Bilateral ultrasound

Report:

Right breast:

- The right breast is predominantly fatty (ACR A)
- No spiculated masses or grouped microcalcifications.
- Normal skin thickness and nipple-areola complex.
- Nonspecific right axillary node, with preserved fatty hila.

Left operative bed :

- The operative bed exhibits an underlying cystic collection measuring about 7x1.5cm, along with another seen in the axillary region, measuring about 6.5x1.5cm.

No definite pathological axillary node is noted.

Opinion:

- Left MRM with postoperative seromas
- Right normal study (BIRADS 1)

Best regards,
Dr. Mahi Mokhtar

99mTc MDP Bone Scan Report (1/1/2025)

* Whole Body Anterior and Posterior Planar Views Acquired 2Hrs. Post I.V Injection of 20mCi of 99mTc MDP
Revealed:

" No definite evidence of active osseous deposits could be seen over the surveyed skeleton.

" Degenerative changes are noted over the dorso-lumbar vertebrae.

" Arthritic changes are noted over both shoulder and both knee joints.

" Both kidneys are visualized.

Conclusion:

" No definite evidence of active metastatic osseous deposits could be seen all over the surveyed skeleton.

Much Obligated

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data:

Left breast retroareolar mass.

Nature of Specimen:

Tru-cut biopsy.

Technique:

- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:

- * IPT (Positive control showed appropriate reactivity):
- ER: Moderate nuclear reaction in 40% of tumor cells (score 7/8).
- PR: Moderate nuclear reaction in 10% of tumor cells (score 3/8).
- Her2: Complete membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 25% nuclear reaction of tumor cells.

Conclusion:

Left breast retroareolar mass, Tru-cut biopsy:

Invasive duct carcinoma, Grade II.

IPT:

- ER: Positive (score 7/8).
- PR: Positive (score 3/8).
- Her2: Positive (score 3+).
- Ki67: Positive in 25% of tumor cells.

IMMUNOHISTOCHEMISTRY REPORT

* Scoring system: "ER, PR"

ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak, 2, intermediate; and 3, strong). Total score from 0 to 8.

* Scoring system: "Her2"

Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Exam : ultrasound ABDOMEN& PELVIS	Age : 61 Year(s)
Medical ID: 3933/2024	Pat. ID: 90734

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- Average in size (15cm at Rt MCL) bright parenchymal echopattern with smooth surface.
- No hepatic focal lesions or intra hepatic biliary radicle dilatation.
- Portal vein is patent and not dilated.

Gall Bladder: -

- Surgically removed
- CBD is not dilated.

Spleen: -

Average size, homogenous.

Kidneys: -

- Both are average in size, shape and echogenicity
- No stones or dilated pelvicalyceal system
- No gross lesion

Para-aortic and pancreatic area: show no gross abnormalities.

No ascites

Urinary Bladder: -

- Average capacity with no stones or diverticular out pouching

Uterus and adnexal ; no abnormalities could be detected

Opinion:

Bright liver likely fatty

Cholecystectomy.

Colonic gaseous distention

**DIGITAL BILATERAL SOFT TISSUE MAMMOGRAPHY AND
COMPLEMENTARY ULTRASOUND**

Indication:

Right breast palpable mass

Report:

- Left Breast:
 - Partially obscured high density spiculated mass is seen in the retro-areola region invading the nipple and ulcerating over the skin. It measures about 45x35mm. by U/S it is seen as a large irregular hypoechoic mass centered at 9 o'clock (extending into the surrounding tissue with intraductal extension reaching the nipple)
 - Another small suspicious mass is noted at 8O'clock measuring about 15x13mm
 - <3 Pathologically enlarged level I axillary LNs largest measures 15mm in TS diameter and 12mm cortical thickness.
 - No pathological enlarged infra or supraclavicular lymph nodes.
- Right Breast:
 - Scattered fibroglandular parenchyma (ACR b)
 - No suspicious micro calcifications or architectural distortion detected.
 - Complementary ultrasound no cystic or solid mass lesions.
 - Normal skin thickness, and nipple-areola complex with average caliber of the retro-areolar central ducts.
 - Nonspecific axillary LN.

Opinion:

- Left locally advanced breast malignant mass with ipsilateral axillary lymphadenopathy (BIRADS 5) for histopathological examination.
- Normal sonomammography of right breast (BIRADS 1)

Best regards,

Dr Eman Ebeid

Dr. Amira H Radwan MD,
Breast Imaging consultant,

NCI, Cairo University

Exam : C.T ABDOMEN & PELVIS	Age : 61 Year(s)
Medical ID: 3933/2024	Pat. ID: 90734

NON-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS

Findings:

I Chest:-

- Left breast retroareolar heterogenous soft tissue density mass with spiculated outlines is seen inseparable from nipple measures about 5.5x4.5x4cm with diffuse overlying skin thickening. It is seen surrounded by small satellites.
- Left axillary solitary pathologically enlarged lymph node measures 2.7x2.4 cm, **Otherwise**, bilateral prominent other axillary level I lymph nodes with preserved hila are also noted.
- Diffuse pulmonary mosaic attenuation pattern is seen showing ground glass mottling intermingled with areas of low parenchymal attenuation of air trapping with bilateral fine atelectatic bands, **Otherwise** clear both lung fields with no definite suspicious nodules, masses or cavitary lesions.
- Small subcentimetric mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Mild cardiomegaly, No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

II Abdomen & pelvis:

- The liver is of average size with homogenous CT texture. No definite enhancing focal lesions or contour irregularities.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.

Patient Name: Sabah Wahib Youssef Moustafa	Date : 11/11/2024
Exam : C.T ABDOMEN & PELVIS	Age : 61 Year(s)
Medical ID: 3933/2024	Pat. ID: 90734

***Scanned skeleton:** no definite worrisome lytic or sclerotic focal lesions.

Opinion:

- Left breast malignant looking mass with surrounding small satellites, as described for SM correlation.
- Left axillary level I solitary pathological lymphnode
- No hepatic or osseous depositions

Pathology Report

Clinical Data: Left breast cancer (pcst NACT) .

Nature of the specimen: Left MRM

Gross Examination:

- Procedure: Left MRM
- measured 24x20x7 cm with covering skin ellipse measured 22x20cm & attached axilla 9x6 cm .
- Tumor extent : A greyish white tumour bed site
- Size: 4x3x3 cm .
- Skin involvement: Nipple & areola were unremarkable grossly .
- Distance from margins: 2 cm away from deep margin
- Lymph nodes number and size: 14 L.Ns up to 2x1 cm .

Microscopic examination:

- Histological type: No residual viable tumor tissue detected
- Ductal carcinoma in situ: No
- Skin involvement: Free nipple and areola
- Lymph node involvement: Free L.Ns (0/14)
- Resection Margins: Free deep margin
- Additional pathological findings: Positive microcalcification
- Histologic response to therapy: Pathologic Complete response

Diagnosis:

Left MRM (post NACT) :

No residual viable tumor tissue detected.

- Free deep margin
- Free nipple and areola
- Free L.Ns (0/14)
- Pathologic Complete Response
- Stage : ypT0 , ypN0
