Pathology Report

Clinical Data: Right breast cancer, Up-Front

Nature Specimen: Right breast conservative surgery, sentinel lymph node biopsy and left breast mammoplasty.

Gross Examination:

Right breast:

1- Right BCS specimen measured 13x10 cm, with no covering skin.

* Tumor extent: An ill defined firm grayish white mass

- Size: 1.3x1.1 cm

* Distance from margins: 1 cm from the least inferior margin.

2- Right SLNs: Fibrofatty tissue piece measured 4x3 cm, entangling 4 lymph nodes up to 1x1 cm.

3- Axillary completion lymph nodes: A fibro fatty tissue piece measured 3x3 cm entangling 4 nodule up to 1x1 cm.

4- Extra inferior margin: A fibro fatty tissue piece measured 4x4x1 cm free of gross induration.

Left breast:

5- Medial excess breast tissue: A fibro fatty tissue piece measured 10x8 cm with skin covering ellipse 9x4 cm free of gross induration.

6- Superolateral excess breast tissue: Multiple fibro fatty tissue pieces measured up to 7x6 cm with skin covering ellipse 6x3 cm free of gross induration.

Microscopic Examination:

* Right breast, BCS and SLNs biopsy:

* Histological Type: Invasive duct carcinoma, with prominent tubular differentiation.

* Grade (differentiation+ nuclear pleomorphism+ mitosis): (2+2+2) Grade II.

* Ductal carcinoma in situ: Focal positivity of intermediate grade (15%).

Pathology Report

- * Lymph node involvement: - SLNs: Positive (3/4) lymph nodes.
- Axillary completion LNs: (0/4) lymph nodes.
- Total nodal status: Positive in (3/8) lymph nodes.
- * Resection Margins: Free margins, inferior margin positive for DCIS with free extramammary margin.
- * Frozen section results:
- SLNs: Positive (2/4) lymph nodes.
- Suspicious inferior margin for DCIS.
- Free extramammary margin.
- * Left breast:
- Unremarkable breast tissue.
- Unremarkable covering skin.

Diagnosis:

Right breast cancer, BCS, SLNs Biopsy and left breast mastectomy:

- * Right breast:
- Invasive duct carcinoma, with prominent tubular differentiation, grade II, with focal intermediate grade DCIS (15%).
- Free resection margins and free extramammary margin.
- Lymph nodes are metastatic in 3/8 lymph nodes.
- Stage: pT1b, pN1.
- * Left breast:
- Unremarkable breast tissue.
- Unremarkable covering skin.

Patient Name: Fatma Hassan Tawfik Abd El Rahman	Date : 24/06/2024
Exam : ultrasound BREAST (BOTH SIDE)	Age : 51 Year(s)
Medical ID: 1791/2024	Pat. ID: 65021

**DIGITAL BILATERAL SOFT TISSUE MAMMOGRAPHY AND
COMPLEMENTARY ULTRASOUND**

Indication:

Right breast palpable mass

Technique

- Bilateral MLO and CC views
- Bilateral 3D MLO DBT (Digital Breast tomosynthesis)
- Bilateral breast ultrasound

Report:

- Right Breast:
 - predominantly fatty (ACR A)
 - Right UOQ area of focal asymmetry with adjacent spicules and skin dimpling covering an area measures 72 X 51 mm in CC view seen by U/S at 10 o'clock measuring about 2.1 X 1.7 cm seen about 10 mm from the skin and more than 50 mm from the nipple.
 - No pathological axillary LNs.
 - No pathological enlarged infra or supraclavicular lymph nodes.
- left Breast:
 - predominantly fatty (ACR A)
 - No suspicious micro calcifications or architectural distortion detected.
 - Complementary ultrasound no cystic or solid mass lesions.
 - Normal skin thickness, and nipple-areola complex with average caliber of the retro-areolar central ducts.
 - Nonspecific axillary LN.

Opinion:

- Right breast malignant mass (BIRADS 6)
- Normal sonomammography of left breast (BIRADS 1)

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast mass.

Nature of Specimen: Tru-cut biopsy, collected at 12/5/2024

Technique:

- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) stained by rabbit monoclonal antibodies using Ultraview HRP DAB as chromogen and hematoxylin as counter-stain. The sections were treated against: ER clone (1E2), PR clone (SP1), Her2 clone (4B5) and Ki67 clone (30-9).

Results:

- * IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear reaction in 90% of tumor cells (Allred score 8/8).
- PR: Strong nuclear reaction in 30 % tumor cells (Allred score 6/8).
- Her2: No membrane reaction in tumor cells (score 0).
- Ki67: 5% nuclear reaction of tumor cells.

Conclusion:

Right breast cancer, Tru-cut biopsy:
Invasive tubular carcinoma, Grade I
IPT:

- ER: Positive (score 8/8).
- PR: Positive (score 6/8).
- Her2: Negative (score 0).
- Ki67: Positive in 5% of tumor cells.

Fatima hassan Tawfik

Bilateral Digital soft tissue mammography with high resolution breast sonography revealed:

Clinical summary: Post right CBS, left reduction mammoplasty

Left breast

- Scattered fibroglandular densities. (ACR b)
- Thickened skin and coarsen trabeculae.
- Upper central dense mass is seen with clustered microcalcifications
- Lower central architectural distortion owing toto the prior surgery
- Ultrasound demonstrated hypoechoic ill defined lesion at 12 o'clock zone b measuring 2.5 x 1.4 cm
- Lower central area of parenchymal disruption underneath the operative scar with no solid , cystic lesions or fluid collections.
- Normal nipple/areola complex.
- Few benign looking axillary lymph nodes with preserved oval shape and central echogenic hilum

Right breast

- Scattered fibroglandular densities. (ACR b)
- Lower central architectural distortion with no speculations, masses, asymmetry , or suspicious microcalcifications.
- Ultrasound demonstrated lower central area of parenchymal disruption underneath the operative scar with no solid , cystic lesions or fluid collections.
- Normal skin/nipple/areola complex.
- Non-specific left axillary LNs.

Conclusion:-

Left breast (BIRADS 4c): an ill defined mass for histopathological correlation

Right breast (BIRADS 2) : Post-operative sequelae.
