بقسم:	رقم طبي:	
ننشرف بأن نوضح فيما يلي تقريراً عن حالته		
تاريخ وساعة الدخول :	تاريخ وساعة الخروج :	
وبعد الكشف والفحوصات والمتابعة وجد انه The patient is prescribed arimidex for the current day and for a total duration of three months, with supportive therapy including calcium and vitamin D. The plan is to free the patient from the current medication regimen and to proceed with the outlined schedule. The patient will continue arimidex for an additional three months; zoledronic acid (Zometa) is pending until a dental assessment is completed.

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast CBS with operative bed suspicious solid mass lesion.
Nature of Specimen: Tru-cut biopsy, collected at 25/6/2024.

Technique:
Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
ER clone (1E2), PR clone (SP1), Her2 clone (4B5).

Results:
ER (Positive control showed appropriate reactivity):
ER: Strong nuclear reaction in 50% of tumor cells (score 7 /8).
PR: Strong nuclear reaction in 15% of tumor cells (score 6 /8).
Her2: No membrane reaction in the tumor cells (score 0).

Conclusion:
Right breast CBS with operative bed suspicious solid mass lesion, Tru-cut biopsy:
revealed resection site changes with tiny focus of Invasive duct carcinoma GII.

ER: Positive (score 7 /8).
PR: Positive (score 6 /8).
Her2: Negative (score 0).

Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, between 1% and 10%; 2, between 11% and 33%; 3, between 34% and 66% and 4, between 67% and 100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak, 2, intermediate; and 3, strong).

IMMUNOHISTOCHEMISTRY REPORT

strong). Total score from 0 to 8.
Scoring system: "Her2"
Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Pathology Report

Clinical Data:

Right breast mass in a case with history of previous diagnosis of breast cancer in 2014.

Nature of the specimen:

Right Simple mastectomy specimen, collected at 14/8/2024.

Gross Examination:

-Simple mastectomy specimen measured 19x14x4.5 cm with covering skin ellipse measured 15x8 cm. Cut section revealed two ill defined grey white firm ill defined masses. The first mass measured 1x1x0.5 cm located 0.5 cm from deep margin. The second measured 1.8x1x1 cm located 0.3 cm from inked deep margin. The distance between two masses is 2 cm. Serialing also revealed an intramammary lymph node measured 1.1x0.6 cm.

Microscopic examination:

- Both masses showed:
- Histological type: Invasive duct carcinoma.
- Grade (differentiation+ nuclear pleomorphism + mitosis): G II(3+2+1).
- DCIS: Focal.
- Angiolinvasion : Not detected
- Skin involvement : Free nipple and areola
- Lymph node involvement: Free intramammary lymph node (0/1).
- Resection Margins: Free deep margin.

Diagnosis:

- Right breast mass , simple mastectomy specimen:
- Recurrent bifocal invasive duct carcinoma , grade II.
- Free nipple and areola.
- Free deep margin .

Patient Name: Serreya Fahmy Tadros Abd Masih	Date : 17/07/2024
Exam : C.T CHEST	Age : 56 Year(s)
Medical ID: 13/2032	Pat. ID: 33096

NON-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST AND PARANASAL SINUSES: -

****Compared to last study 2-5-2023**

Findings:

I -Chest: -

- Still noted right breast surgery with UOQ tiny nodule measures 0.6 compared to 0.8 cm.
- Bilateral few pulmonary micronodules largest seen in anterior segment of right upper lung lobe measures 3 mm.
- No sizable hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Heterogenous thyroid gland with enlarged left lobe for neck US assessment.
- Subtle illdefined lucent small areas are seen affecting sternum.

II-PNS:

- Minimal bilateral maxillary mucosal thickening is seen.
- Clear rest of scanned paranasal sinuses with intact bony boundaries.
- No air/fluid levels are seen.
- Patent both osteomeatal units and sphenoidal recesses.
- Hypertrophied inferior nasal turbinate.
- The nasal septum bowed to the right side.
- Clear nasopharynx.
- **Few calvarial osseous lesions are seen with ground glass density for bone scan correlation**

Patient Name: Serreya Fahmy Tadros Abd Masih	Date : 17/07/2024
Exam : C.T CHEST	Age : 56 Year(s)
Medical ID: 13/2032	Pat. ID: 33096

Opinion:

- Right breast nodule for SM correlation.
- Few osseous lesions for bone scan correlation
- Syable few pulmonary micronodules.
- Minimal bilateral maxillary sinusitis.
