PATIENT NAME: HALA Abdalmomy ABD EL WAHED AID
GENDER: Female

DATE : 31-Aug-2026 11:05 AM

PATIENT ID: 10126284709
AGE: 38 y
ORDER: 4016452,4016453

FULL FIELD DIGITAL MAMMOGRAPHY AND COMPLEMENTARY ULTRASOUND

INDICATION:

- Screening.

TECHNIQUE:

- CC and MLO view.
- Complementary ultrasound

REPORT:

Left breast

- Heterogeneously dense breast parenchyma ACR C.
- Regional pleomorphic calcifications are noted in the LOQ; occupying the LOQ and extending to the nipple; they are seen in part overlying an irregular hypoechoic non mass lesion centered at around 4:00 measuring around 57x19mm. Irregular hypoechoic masses are also seen at 4:00 measuring 20.7x11, 8x4, and 7x5mm.
- Normal skin thickness and contour.
- Normal nipple areola complexes.
- The axillary lymph nodes demonstrate echogenic hila however a level one node measuring 11x8mm shows a rather eccentric hilum and increased cortical thickness reaching 4mm.

Right breast

- Heterogeneously dense breast parenchyma ACR C.
- No spiculated mass lesions or grouped microcalcifications.
- This was confirmed by Complementary Ultrasound which showed no solid or cystic mass lesions.
- Normal skin thickness and contour.
- Normal nipple areola complexes.
- Nonspecific axillary lymph nodes.

OPINION:

Left breast: malignant process impressive of DCIS with an invasive component and an indeterminate lymph node, **BIRADS 5 for biopsy.**

PATIENT: HALA Abdalmomy ABD EL WAHED AID, 10126284709, Female, 38 y
Report version 1, 31-Aug-2026 11:50 AM

Right breast: adenosis, BIRADS 2.

RECOMMENDATION:

Reported By,

Dr. SHEREHAN WAHEED, MD

31-Aug-2026 11:50 AM

SURGICAL PATHOLOGY

Biopsy Small - (1 Site)

Specimen Id 2609010109
Accession No SUR-26-3178
Sample Type Tissue

Collection Date 01/09/2026 11:21 AM
Received Date 01/09/2026 11:21 AM
Doctor Gehad Abdelrahim Ibrahim Mohamed

Clinical Information

Left breast 4 o`clock lesion, US guided biopsy;

Gross Picture

Six tissue cores, ranging in size from 1 cm to 1.5 cm long, Totally submitted.

Microscopic Picture

A case of invasive duct carcinoma ,grade 3. Associated high grade DCIS component (Comedo & cribriform) with calcification, No lymphovascular emboli were detected .Stroma is desmoplastic with mild inflammatory cell reaction.

Histological grade

Mitosis score (1-3):

Diagnosis

Left breast 4 o`clock lesion, US guided biopsy:

Invasive duct carcinoma, grade 3.

Comments

ER, PR & Her2 are available on request.

Immunohistochemical Report

pathology number
3178-26.

Clinical Data
Lt. breast cancer.

Gross Picture :
Referred block submitted for HER 2 immunostaining.

System Used :
Ventana Benchmark ULTRA autostainer.

Antibody:
Ventana anti-HER-2 [4B5] rabbit monoclonal antibody.

Scoring system :
Reference: ASCO-CAP HER2 Test Guideline Recommendations, 2018. IHC 0 :as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within $\leq 10\%$ of the invasive tumor cells. IHC 1+ : as defined by incomplete membrane staining that is faint/barely perceptible and within $> 10\%$ of the invasive tumor cells. IHC 2+ : The revised definition of IHC 2+ (equivocal) is weak to moderate complete membrane staining observed in $> 10\%$ of tumor cells.. IHC 3+ : based on circumferential membrane staining that is complete, intense in $> 10\%$ of tumor cells.

(Laterality) breast Cancer:
left

Laterality :
Left

Her2 Result
Positive [score 3+]

Immunohistochemical Report

pathology number
3178-26.

Clinical Data
Lt. breast cancer.

Gross Picture :
Referred block submitted for ER/PR immunostaining.

System Used :
Ventana BenchMark ULTRA autostainer.

Antibody:
Ventana anti-PR[1E2] Rabbit monoclonal antibody, Ventana anti-ER[SP1] Rabbit monoclonal antibody.

Scoring system :
According to the ASCO/CAP guideline update, 2019 : Samples with 1% to 100% of tumor nuclei positive for ER or progesterone receptor (PgR) are interpreted as positive. If ER (not PgR), 1% to 10% of tumor cell nuclei are immunoreactive, the sample are reported as ER Low Positive. A sample is considered negative for ER or PgR if < 1% or 0% of tumor cell nuclei are immunoreactive.

Allred score: proportion of cells staining (0, no staining; 1, <1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak, 2, intermediate; and 3, strong). Total score from 0 to 8.

Comment:
- There are much more limited data on the 2% to 3% of cancers that are low ER expressers (most often defined as 1%-10% ER-positive cells by IHC) and their potential benefit from endocrine therapy.
