Pathology Report

Clinical Data: Left breast cancer, post NACT.

Nature Specimen: Left modified radical mastectomy specimen.

Gross Examination:

- * Procedure: Left MRM measured 27x26x7 cm with covering skin ellipse measured 26x25 cm.
- * Tumor extent: An ill defined greyish white rubbery to firm tumor bed site.
- * Size: 2x1 x1 cm.
- * Skin involvement: skin showed edema.
- * Distance from margins: 3.5 cm away from deep margin, and 3 cm from skin.
- * Additional findings: A firm greyish white nodule measured 3x1 cm (UOQ).
- * Rest of the breast showed multiple variable sized scattered greyish white rubbery foci measured up to 1.5x1 cm with least deep margin 2.5 cm and 2 cm from skin.
- * Lymph nodes number and size: 17 LNs up to 1.7x1 cm.
- 1&2) TBS. 3) Deep margin. 4 to7) Scattered rubbery grey white areas. 8,9) Firm nodule. 10) N&A. 11,12 & 13) LNs.

Grossing by Dr. Yasmine Esam.

Microscopic Examination:

- * Histological type: Multicentric residual Invasive duct carcinoma with focal mucinous activity.
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- Maximal tumor diameter: 3 cm.
- Actual tumor cellularity: 40%, tumor necrosis index: 60%
- * Ductal carcinoma in situ: Focal DCIS (6%).
- * Lymphovascular emboli: Positive.
- * Perineural invasion: Not identified.
- * Skin involvement: Free nipple & areola.
- * Lymph node involvement: positive in (3/18) with focal extracapsular exention, largest

Pathology Report

metastatic deposit (13 mm).

- * Resection Margins: Free.
- * Histologic response to therapy: Partial.
- * Microcalcifications: Not identified.

Diagnosis:

Left breast cancer, post NACT, MRM specimen:

Residual invasive duct carcinoma with focal mucinous activity.

- Maximal tumor diameter: 3 cm.
- Actual tumor cellularity: 40%, tumor necrosis index: 60%.
- Free Resection Margin.
- Free nipple & areola.
- Lymph nodes: (3/18) with focal extracapsular extension.
- Partial pathological response to therapy.
- Stage: ypT2 ypN1 ypMx.
- RCB: 3.709, RCB class III.

PATIENT NAME: WAFAA ABD AL MONEM AMEEN ABDELMOLA

GENDER: Female

DATE : 23-Apr-2024 11:58 AM

PATIENT ID: 10124240829

AGE: 50 y

ORDER: 2811422,2811423

Multislice post contrast CT scan of the chest, abdomen and pelvis revealed:**(i) Chest:**

- Most of right breast parenchyma out of field of exam.
- Left axillary level I, II & III pathological lymph nodes and amalgamated the largest one measures 6.2 x 6.6 cm.
- No pulmonary nodules, cavitary lesions, consolidative patches or bronchiectatic changes.
- No CT evidence of hilar or mediastinal lymph node enlargement.
- No pleural or pericardial collections seen.
- No gross cardiac abnormality.
- Right thyroid nodule measures 15 x 20 mm for US correlation. For US correlation.

(ii) Abdomen and pelvis:

- The liver is enlarged in size showing homogenous CT density and enhancement with no focal lesions.
- Patent and homogeneously enhancing portal vein.
- Calcular G.B.
- No intra or extra hepatic biliary radicles dilatation.
- Normal CT appearance of the spleen, pancreas, suprarenal glands, both kidneys apart from small cortical cysts, aorta and IVC.
- Underfilling of the urinary bladder showing no stones, masses or diverticulae.
- No retro-crural, para-aortic or pelvic lymphadenopathy.
- No ascites.
- D2 and L3 tiny sclerotic foci for bone scan correlation

OPINION:**A known case of left breast cancer showing:**

- Left axillary pathologically enlarged lymph nodes.
- D2 and L3 tiny calcific focus for bone scan correlation.
- No pulmonary or hepatic metastatic deposits.

PATIENT: WAFAA ABD AL MONEM AMEEN ABDELMOLA 10124240829, Female, 50 y

Report version: 2, 24-Apr-2024 03:39 PM

Patient Name: Wafaa Abd Al Monem Ameron Abd Al Mawla	Date: 04/08/2024
Exam: ultrasound ABDOMEN & PELVIS	Age: 50 Year(s)
Medical ID: 1530/2024	Pat. ID: 77123

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- Mildly enlarged in size (about 17 cm at the right MCL), smooth outline, bright echopattern. No intra hepatic biliary radicle dilatation.
- Portal vein is not dilated and patent.

Gall Bladder: -

- Average size, normal wall thickness, multiple variable sized hyperechoic mobile stones are noted; measuring 5 - 15 mm.
- CBD is not dilated measuring 5 mm.

Spleen: mildly enlarged size (About 13.5 cm), displaying homogenous echopattern.

Kidneys: -

- Are of normal size and site, normal echogenicity, no stone or backpressure changes, no solid or cystic lesion.
- Both ureters are noted dilated.

URINARY BLADDER: Normal filling, Normal wall thickness, no stones or diverticulae or solid lesion detected.

Uterus: -

- Anteverted, average sized uterus. Endometrial thickness measures about. mm, no focal lesions.

Ovaries: - both are average in size with no dominant follicle could be detected.

- No free fluid in the Douglas pouch.
- Para-aortic and pancreatic area: no gross lesion

Opinion:

- Bright hepatomegaly likely fatty for liver profile correlation.
- Mild splenomegaly.
- Calcular gall bladder.

Best Regards,
Dr. Mostafaz Adel, MSc.

FULL FIELD DIGITAL MAMMOGRAPHY AND COMPLEMENTARY ULTRASOUND

INDICATION:

- left breast palpable lump .

TECHNIQUE:

- CC and MLO view.
- Complementary ultrasound

REPORT:

- Scattered fibroglandular densities of both breasts . (ACR b)
- left UOQ and LOQ irregular shaped spiculated margin high density mass lesions .
- This was confirmed by Complementary Ultrasound which shows left irregular shaped hypoechoic mass lesion measuring 24x25mm , 10mm away from overlying skin , with mild internal vascularity by color doppler study seen at 1-2 O'clock , surrounded by similar irregular hypoechoic satellite nodules the largest measuring measuring 11x10mm occupying area from 1 to 5 oclock with suspected extension to nipple??
- another similar lesions seen at 4-5 O'clock measuring 28x18mm and 17x8mm
- another indeterminate circumscribed hypoechoic nodule seen at 12 oclock measuring 10x5mm
- no right solid or cystic mass lesions.
- Normal skin thickness and contour.
- Normal nipple areola complexes.
- left enlarged pathological axillary (level I,II,III) more than three with

PATIENT: WAFAA ABD AL MONEM AMEEN ABDELMOLA, 10124240829, Female, 50 y

Report version 2, 08-Apr-2024 02:13 PM

Page 1 of 3

the largest amalgamated nodes measuring 5x2,7cm with muffled hilum.

- no supraclavicular pathological lymph nodes .
- Right nonspecific axillary lymphadenopathy.

OPINION:

- left breast UOQ and LOQ malignant looking mass lesions as above described with ipsilateral pathological (level I,II,III) axillary lymph node for histopathological correlation (BIRADS 4c) .
- No suspicious finding of right breast (BIRADS2).

Referral to clinic

Patient Name: Wafaa Abd Al Moneim Ameen Abd Al Mawla	Date : 03/10/2024
Exam : C.T CHEST	Age : 51 Year(s)
Medical ID:	Pat. ID: 77123

NON-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST & PARA NASAL SINUSES:-

1. PNS:

- Right maxillary moderate mucosal thickening.
- Clear scanned paranasal sinuses with intact bony boundaries.
- *No CT evidence of hyper-densities within the mucosal thickening or bone destruction/erosions.*
- No air/fluid levels are seen.
- Patent both osteomeatal units and sphenoethmoidal recesses.
- The nasal septum is deviated the left side with bony spur formation.
- Clear nasopharynx.

2. CHEST:

- Clear both lung fields
- No evidence of pleural effusion, pleural thickening or masses seen.
- No pathological mediastinal lymph nodes.
- No gross cardiac abnormality. No pericardial effusion detected.
- Normal non-enhanced appearance of the thoracic aorta and the great vessels.
- Normal appearance of the chest wall.
- Well-defined right thyroid lobe nodule measuring 1.9x1.6 cm.
- Upper abdominal cuts show multiple gallbladder stones ,

OPINION:

- *No CT evidence suggestive of fungal sinusitis.*
- *No CT evidence of pneumonia.*

99MTC-MDP BONE SCAN**Desired Information: -**

Skeletal survey.

Technique:

Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

Report:

No hot spot that account for osseous deposits could be detected all over the surveyed skeleton.

Regenerative changes are seen over dorso-lumbar vertebrae.

Arthritic changes are seen over both knees.

Both kidneys are normally visualized.

Conclusion:

No definite evidence of metastatic osseous deposits.
