أطلعت اللجنة علي لائحة العلاج الخاصة بالمجالس وتلتزم جهة العلاج بلائحة المجالس الطبية. كما تقرر اللجنة بان البيانات المدونة في هذا النموذج صحيحة.
تعتمد صحة البيانات المرفقة
رئيس اللجنة ومدير
المستشفى.

تتعهد المستشفى أن لا يتم تنفيذ القرار إلا بعد مراجعة الملف الطبي للمريض وإعادة مناظرة المريض بالمستشفى قبل الصرف.

Detailed Medical Report		
		السيد
تحتية طبية وبعد,,		
إيماء للطلب المقدم من	بشأن تقرير طبي للمريض	
بقسم:	رقم طبي:	
ننشرف بأن نوضح فيما يلي تقريراً عن حالته		
تاريخ وساعة الدخول :	تاريخ وساعة الخروج :	
وبعد الكشف والفحوصات والمتابعة وجد انه MDT 9/2023: The patient was diagnosed with T2 N0 N0 disease and is scheduled for adjuvant therapy with aromatase inhibitor (AI) plus zoledronic acid (ZOMETA). The plan includes a 12-month course of FEMARA and additional supportive measures as requested. T2N0M0: In January 2026, the patient underwent a BIRADS 1 assessment of the surgical margin (SM). The patient is to receive adjuvant aromatase inhibitor therapy (ARAMIDEX) for a duration of three months. For adjuvant ARAMIDEX: Supportive care has been ordered along with laboratory monitoring for zoledronic acid therapy. Adjuvant: The patient will continue ARAMIDEX for a total of three months with supportive care. Neck ultrasound is scheduled, and the next visit is planned for 1/11/2026.

Exam : C.T. ABDOMEN & PELVIS WITH CONTRAST	Age : 54 Year(s)
Medical ID:	

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS: -

Findings:

I Chest:-

- Right breast retroareolar irregular lesion measures 1.7 x 2.4 cm.
- Clear both lung fields. No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.
- Heterogenous enlarged thyroid gland for neck US assessment.

II Abdomen & pelvis:

- The liver is of average size with homogenous CT texture. No focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.
- No suspicious lytic or sclerotic lesions

Opinion:

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast retro-areolar malignant looking solid mass lesion.
Nature of Specimen: Tru cut biopsy, collected at 05/02/2023, 11:30 am.

Gross Examination:

Four grayish white and fatty tissue cores up to 1 cm , totally submitted.

IHC technique: Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9).

Microscopic Examination:

- * Histological type: Invasive duct carcinoma with microcalcification.
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+2) Grade II.
- * DCIS: No.
- * Angioinvasion: Couldn't be detected in the received biopsy
- * IPT (Positive control showed appropriate reactivity) :
- * ER: Strong nuclear reaction in 95% of tumor cells (Allred score 8/8)
- * PR: Strong nuclear reaction in 15% of tumor cells (Allred score 6/8)
- * HER2: No membrane reaction in tumor cells (score 0)
- * Ki 67: 25% nuclear reaction of tumor cells

Diagnosis

Right breast retro- areolar mass, Tru cut biopsy:
Invasive duct carcinoma, Grade II.

IPT:

- * ER: Positive (score 8/8).
- * PR: Positive (score 6/8).

MR MAMMOGRAPHY OF BOTH BREASTS:

CLINICAL SUMMARY:

A known case of right breast carcinoma, treated by neo-adjuvant chemotherapy and radiotherapy, for pre-operative assessment

IMPRESSION:

LEFT BREAST: (BIRADS 1)

Normal study

RIGHT BREAST: (BIRADS 6)

Residual paraareolar neoplastic mass as described, for further clinical assessment

TECHNIQUE:

Multiplanar imaging was performed on a 1.5T magnet with a dedicated breast coil using the following sequences:

- Axial T1, T2 IR
- Sagittal T2
- Subtraction of pre & post contrast 3D dynamic axial Fat suppressed FLASH in 1.5mm slice thickness after 0.1mmol/kg Gd-DTPA with MIP image reformatting

FINDINGS:

LEFT BREAST:

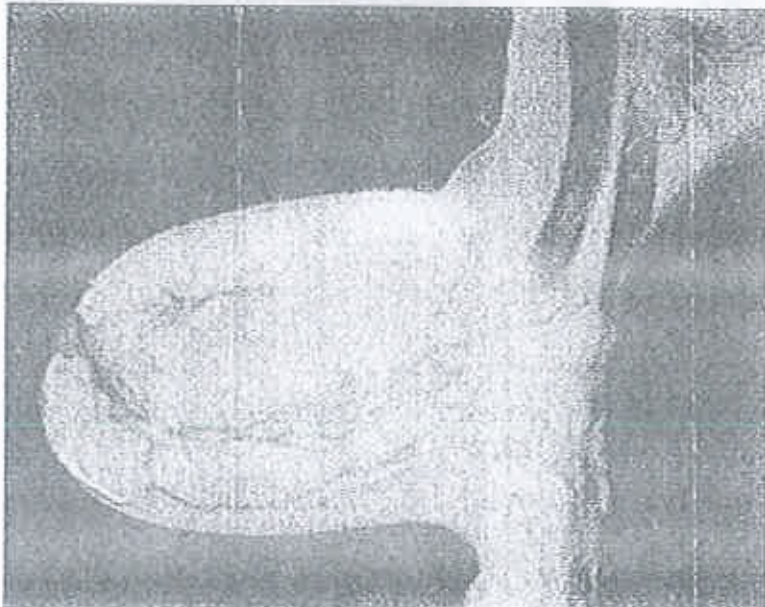

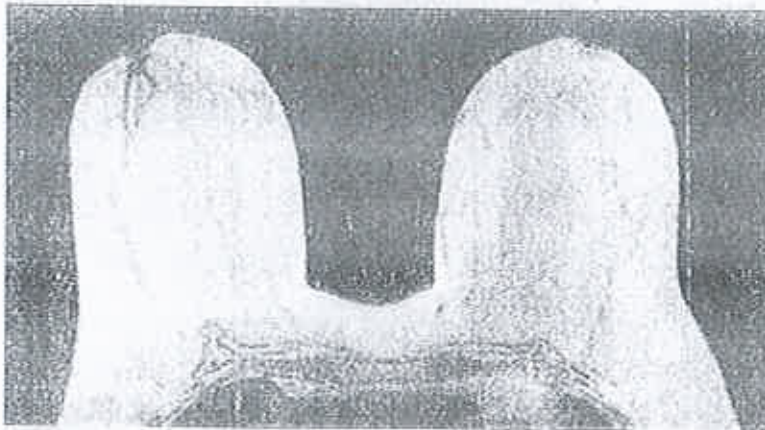

- On the pre-contrast series, no abnormal signal is seen.
- After injection of contrast, no rapidly enhancing masses or other suspicious enhancement patterns were observed to suggest invasive malignancy.
- Normal skin/nipple/areolar complex.
- No pathological axillary lymph nodes.

Name : Mrs. Madeha Ayad Abdou Gungia
Date : 17-07-2023

Code : R2922104

RIGHT BREAST:

- An ill defined spiculated mass is seen in the paraareolar region, reaching the nipple and extending backwards measuring collectively about 5.5x3cm, exhibiting low signal in the T1 and T2WIs and high signal in the IRWIs.
- After injection of contrast it enhanced heterogeneously.
- No definite pathological axillary lymph nodes.

Best regards,
Dr. Mahi Mokhtar

^{99m}Tc -MDP BONE SCAN

Desired information: skeletal surveying to detect multiple lesions.

Technique: Anterior and posterior whole-body scan performed 2 hours after I.V administration of 20 mCi ^{99m}Tc -MDP;

Report:

- Warm tracer uptake is seen at the left femoral head likely of worrying nature for MRI correlation to exclude metastatic nature .
- LV5 Rt sided facet joint arthropathy .
- Degenerative changes are noticed over Dorso-lumbar vertebrae.
- Other wise , no definite hot spot that accounts for osseous deposits could be detected all over the surveyed skeleton.
- Both kidneys are normally seen.

Conclusion:

Warm tracer uptake is seen at the left femoral head of worrying nature for further MRI correlation , and close follow up .

Thanks for referral

DR . Sherien Mahdy, MD

RD/ Mohamed Emara

Patient Name: Madiha Ayad Abdou Gerguis	Date : 11/12/2023
Exam : ultrasound ABDOMEN& PELVIS	Age : 54 Year(s)
Medical ID: 398/2023	Pat. ID: 29040

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- Average in size displaying homogenous parenchymal echopattern with smooth surface.
- No definite focal lesions or intra hepatic billiary radicle dilatation.
- Portal vein is patent and not dilated.

Gall Bladder: -

- Surgically removed
- CBD is not dilated.

Spleen: -

- average size, homogenous.

Kidneys: -

- Both are of normal size, shape, echogenicity and well differentiated with good corticomedullary differentiation.
- No stones or dilated pelvi-calyceal system
- No gross masses or space occupying lesions could be seen.

Para-aortic and pancreatic area: show no gross abnormalities.

No ascites.

Urinary Bladder: -

- Average capacity with no stones or diverticular out pouching

Uterus and adenexa; uterus is surgically removed

Opinion:

Cholecystectomy
Hysterectomy

Signature Dr . Nermien Ramadan

Patient Name: Madiha Ayad Abdou Gerguis	Date : 26/04/2023
Exam : C.T CHEST	Age : 54 Year(s)
Medical ID:	Pat. ID: 29040

NON-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST: -

Findings:

- Right breast retroareolar irregular lesion measures 1.4 x 2.4 cm with calcification.
- The anterior segment of the right upper lung lobe shows few areas of ground glassing.
- No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No CT pathologically enlarged hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- No gross cardiac abnormality. No pericardial effusion detected.
- Normal non-enhanced appearance of the thoracic aorta and the great vessels.
- The scanned skeleton shows no definite worrisome lytic or sclerotic lesions, yet DISH (Diffuse Idiopathic Skeletal Hyperostosis) is noted in the scanned spine.
- Upper abdominal cuts are unremarkable.
- Heterogenous enlarged thyroid gland with right sided calcific foci.

OPINION:

- *Mild inflammatory changes affecting the right upper lung lobe as described for clinical correlation.*
- *Heterogenous enlarged thyroid gland for U/S assessment.*
