Detailed Medical Report		
		السيد
تحتية طبية وبعد,,		
	بشأن تقرير طبي للمريض	إيماء للطلب المقدم من
	رقم طبي:	بقسم:
ننشر بأن نوضح فيما يلي تقريراً عن حالتها		
	تاريخ وساعة الخروج :	تاريخ وساعة الدخول :
وبعد الكشف والفحوصات والمتابعة وجد انها The patient’s tumor was documented as estrogen receptor (ER) 8/8, progesterone receptor (PR) 8/8, and HER2 negative. Following neoadjuvant chemotherapy (POST NACTH), the patient underwent radiation therapy after breast-conserving surgery (RT BCS) with pathology indicating PTIS PNIS M0. Multidisciplinary team discussion in February 2022 recommended a regimen of PORTH, ZOLADEX, and TAMOXIFEN; the patient is currently receiving ZOLADEX and TAMOXIFEN. A pelvic-abdominal ultrasound performed in April 2026 was reported as free of abnormal findings. A sonomammography for tamoxifen monitoring (3 months) and supportive care (3 months) remains pending. The patient is scheduled for the next follow-up visit in five weeks.

Pathology Report

Clinical Data: Right breast cancer, post NACT.

Nature of the specimen: Right BCS and Right SLNs biopsy.

Gross Examination:

- Procedure: Right breast conservative surgery specimen; measured 10.5x7x3 cm, Covering nipple and areola measured 4x2 cm.
- Tumour extent : An ill defined rubbery grayish white tumor bed site
- Size: 5x3x2 cm
- Distance from margins: 3 cm from lateral and medial margins, 0.4 cm from deep margin (least).
- Lymph nodes number and size: Four nodules up to 1x1 cm
- Frozen section: Free margins, One lymph node suspicious for micrometastasis.

Microscopic examination

- Histological type: Ductal carcinoma insitu, no invasive component
- Angioinvasion: Negative
- Lymph node involvement: One positive for micrometastasis
- Resection, Margins: Free
- Histologic response to therapy: Pathologic partial response
- Additional pathologic findings: Free nipple and areola

Diagnosis:

Right breast cancer; Right BCS and SLNs biopsy:

- Ductal carcinoma insitu, with no invasive component
- Free nipple and areola
- Free surgical margins
- One lymph node shows micrometastasis

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data:

Right breast UOQ lesion.

Nature of the specimen:

Tru cut biopsy, collected 17/4/2022, 11:10 AM.

Gross Examination:

- Multiple grayish white tissue cores up to 1 cm, totally submitted.
- Sections prepared from paraffin block for immune- staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9)

Microscopic examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): II(3+2+2)
- With DCIS component
- Biomarkers:

ER: Strong nuclear reaction in 95% of tumor cells (Allred score 8/8)

PR: Strong nuclear reaction in 95% of tumor cells (Allred score 8/8)

Her-2: No membrane reaction in tumor cells (score 0)

Ki 67: 15 % nuclear reaction

Diagnosis:

Right breast lesion; Tru cut biopsy:

- Invasive duct carcinoma, grade II
- ER: Positive (score 8/8).
- PR: Positive (score 8/8).
- HER-2: Negative (score 0).

Patient Name: Walaa Abdel Ma'boud Ali Mohamed	Date : 23/04/2024
Exam : C.T CHEST WITH CONTRAST	Age : 41 Year(s)
Medical ID: 1793/2022	Pat. ID: 13113

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN & PELVIS REVEALED: -

- Reported case of operated breast cancer.
- Compared to the previous study dated 30-3-2023.

Chest:

- Right breast & axillary operative beds showing no sizable masses or sizable axillary lymph nodes.
- Still noted right upper lung lobe posterior segment pulmonary nodule with internal calcification, mostly representing post granulomatous sequel.
- Currently noted right upper lobe and middle lobe fine subpleural reticulations, likely post therapeutic sequel.
- No pathological hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Average cardiac size. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

Abdomen and pelvis:

- The liver is still moderately enlarged with homogenous CT texture. No definite focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- No pathological abdominal or pelvic lymph nodes.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both supra-renals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- IUD is seen.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.

The scanned skeleton:

- Stable L2 small and right iliac tiny lytic osseous lesions.

Total DLP (mGy.cm):

Patient Name: Walaa Abdel Ma'boud Ali Mohamed	Date : 23/04/2024
Exam : C.T CHEST WITH CONTRAST	Age : 41 Year(s)
Medical ID: 1793/2022	Pat. ID: 13113

- No vertebral structural collapse or extra-osseous soft tissue component.

OPINION:

- Right breast & axillary operative beds showing no sizable masses or sizable axillary lymph nodes.
- Rather stationary rest of the study.
- No definite pulmonary or hepatic metastatic deposits.

Dr. Ali Elsisy, MSc.

Patient Name: Walaa Abdel Ma'boud Ali Mohamed	Date : 12/09/2024
Exam : MAMMOGRAPHY BOTH	Age : 42 Year(s)
Medical ID: 1793/2022	Pat. ID: 13113

**BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION
ULTRASOUND**

Indication:

Patient had rt CBS

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR B)
- No left breast suspicious mass lesions, micro calcifications or architectural distortion detected.
- Right breast focal area of parenchymal distortion owing to prior surgical interference, with post-operative scarring and diffuse edema pattern in the form of increased trabeculations and skin thickness.
- Complementary ultrasound showed right breast UOQ focal parenchyma distortion, owing to prior surgical interference with clear operative bed with no evidence of recurrent mass lesions.
- no left breast solid or cystic mass lesions, normal skin thickness and nipple-areola complex.
- Nonspecific left axillary LN, with preserved fatty hila and uniform cortical thickness.
- Free right infra and supra clavicular regions.

Opinion:

- Right breast focal parenchymal distortion owing to prior surgical interference (CBS) with post-operative sequel, with free operative bed with no evidence of recurrent mass lesions (BIRADS 2)
- Normal study of the left breast (BIRADS 1)

Yours truly
