تقرير طبي

السيد

تحية طبية وبعد,,

بشأن تقرير طبي للمريض

إيماء للطلب المقدم من

رقم طبي:

بقسم:

نتشرف بأن نوضح فيما يلي تقريراً عن حالته

تاريخ وساعة الخروج :
PM 01:17 05-07-2026

تاريخ وساعة الدخول :
-- --:-- yyyy-mm-dd

وبعد الكشف والفحوصات والمتابعة وجد أنه

المریضة تعاني من ورم غير حميد بالثدي و تحتاج الي Further investigations and imaging

Patient Name: Eman Fahim Macarios Hanna	Date : 05/09/2024
Exam : ultrasound BREAST (BOTH SIDE)	Age : 55 Year(s)
Medical ID: 1165/2024	Pat. ID: 53417

Combined bilateral breast mammography and complementary ultrasound

Indication:

Right breast pathologically proven malignant mass on NACT for assessment.

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR B)
- Right breast shows UOQ clip
- Complementary ultrasound revealed right breast subtle area of altered parenchyma, seen at 11o'clock measured 0.6x0.7cm, 1cm from the skin, 6cm from the nipple (was 1.2x1.2cm, in prior study dated 2/5/2024)
- Normal skin thickness, and nipple-areola complex of the right breast.
- Nonspecific left axillary LN
- The previously reported right axillary LN, is no more appreciated in today's study
- Free right infra and supra-clavicular regions.

Opinion:

- Partial radiological response of the right breast UOQ malignant mass (BIRADS 6)
- Complete radiological response of the right axillary LN
- Benign findings left breast (BIRADS 2)

Yours truly

Pathology Report

- ER: Positive (score 8/8)
- PR: Positive (score 4/8)
- Her2: Equivocal (score 2+)
- Her2 by SISH: amplified with small clusters.

* Scoring system: "ER, PR"

ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak; 2, intermediate; and 3, strong). Total score from 0 to 8.

* Scoring system: "Her2"

Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Patient Name : ایمان فہیم مکاریوس حنا

Age : 55 Y

Referred By Prof. Dr. :

Clinical Diagnosis : Right breast mass

Nature of Specimen : Referred one block labelled as 200483/24 (Core biopsy)

Receiving Date : 2024-04-07

Analysis ID :  84

Gender : Female

Patient ID : 634176

IMMUNOHISTOCHEMISTRY REPORT

Technique :

Sections prepared from the paraffin block were stained for HER 2 gene and chromosome 17 using Silver In Situ Hybridization (SISH) technique in Benchmark XT (Ventana).

Results :

The ratio of Her 2 signals to chromosome 17 signals in the nuclei of the tumour cells is 3 (more than 2) indicating amplification of HER2 gene.

Average Her 2 copy nb/cell is 6

Conclusion :

Referred block, HER 2 by SISH, POSITIVE HER 2 GENE AMPLIFICATION, RATIO = 3

Patient Name: Aman Fahim Makariosa

Patient ID: 630885

Exam Date: 8/1/2024

Whole Body PET/CT Examination

History and Clinical Data:-

Patient data:-

Female patient, 55 years old, Weight: 100 Kg, Height: 158 cm, Blood Glucose level: 101 mg/dl

Radiopharmaceutical:-

F-18-FDG 9 mCi injected I.V.

Clinical background:-

- History of suspicious right breast mass (3/2024) post right axillary lymph node biopsy and pathology revealed adenocarcinoma of breast origin.

Purpose of the study:-

- Initial evaluation.

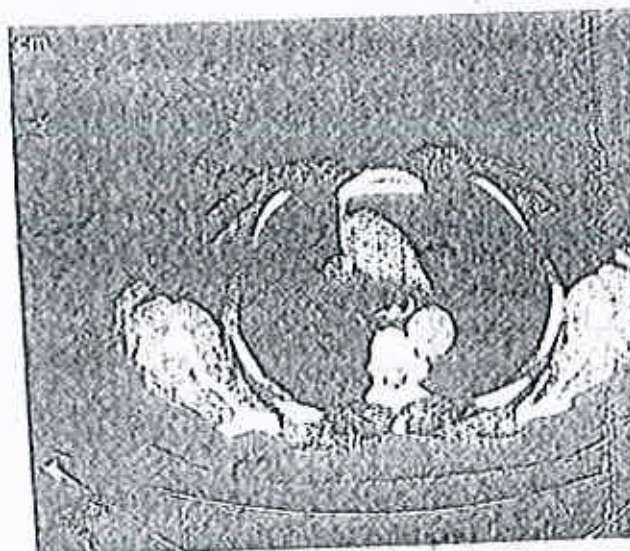

Technique:-

- Approximately one hour following the IV injection of the radiopharmaceutical, a total body PET-CT was acquired from the knees to the skull with arms extended above the head. CT was acquired for the purpose of anatomic localization, attenuation correction and diagnostic purpose.
- Data was processed and displayed according to departmental protocol.
- Adequate liver and brain FDG uptake with adequately co-registered PET and CT images.
- Liver showed average SUV ~ 2.86.
- Mediastinal blood pool average SUV ~ 2.2.

Findings:-

Breasts and Axillary regions:-

- Low grade metabolically active right breast upper outer quadrant soft tissue nodule measuring about 1.8 x 1.2 cm with max SUV ~ 1.35.

Patient Name: Iman Fahim Makariosu

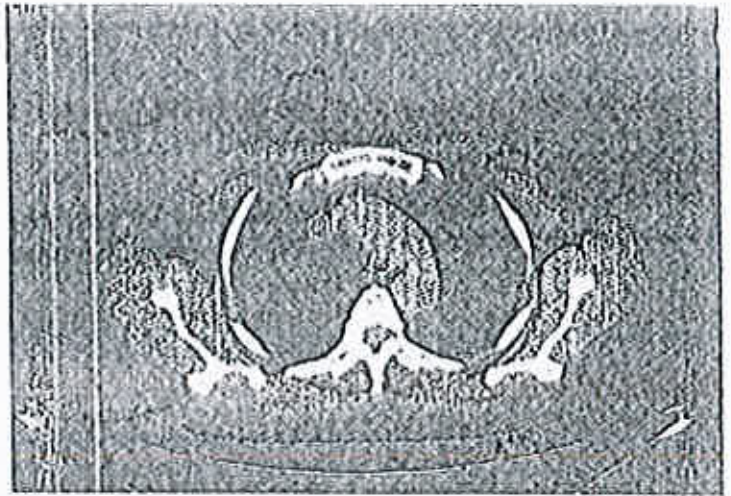

Patient ID: 650885

Exam Date: 8/4/2024

- No metabolically active left breast masses.
- Few low grade metabolically active right axillary lymph nodes measuring up to 1.5 cm with max SUV ~ 1.11.
- No metabolically active left axillary lymph nodes.

Head and Neck:-

- Scanned brain sections show uniform bio-tracer distribution in the cerebral and cerebellar hemispheres.
- No metabolically active (FDG avid) masses are noted.
- No metabolically active (FDG avid) cervical lymph-nodes are noted.

Upper Chest:-

- No metabolically active (FDG avid) pulmonary nodules or masses are noted.
- No metabolically active (FDG avid) pleural effusion is noted.
- No FDG avid (metabolically active) mediastinal lymph-nodes are noted.
- Aberrant right subclavian artery (normal variant)
- Borderline cardiac size with no pericardial effusion.
- Low grade metabolically active bilateral elastofibroma dorsi.

Abdomen and pelvis:-

- Average sized liver showing no metabolically active (FDG avid) focal lesions.
- Average sized spleen showing no metabolically active (FDG avid) focal lesions.
- No metabolically active (FDG avid) porta hepatis, mesenteric, retroperitoneal or pelvic lymph-nodes are noted.
- No ascites.
- Evidence of subtotal hysterectomy with clear operative bed.

Patient Name: *Iman Fahim Makariosu*

Patient ID: *650885*

Exam Date: *8/4/2021*

- The rest of the abdominal and pelvic organs show normal PET/CT appearance with no related focal lesions or abnormal FDG uptake.

1) Axial and scanned Appendicular Skeleton:-

- No (FDG avid) metabolically active osteolytic or osteosclerotic lesions are noted.
- Diffusely increased FDG uptake along scanned skeleton with max SUV ~ 4.25 (likely anemia related).
- Bone island of the left femoral head.

Conclusion:

- *Positive study for low grade metabolically active right breast soft tissue nodule with regional low grade metabolically active nodal metastatic deposits.*
- *No metabolically active distant metastatic deposits.*
- *Stage IIa (T1, N1, M0) right breast cancer.*

Thank You for Your reference
