Pathology Report

Name: نورة نجاة عبد العزيز Age: 40 years.

Clinical data: Left breast WLE invasive duct carcinoma grade II.

Specimen type: Left breast sentinel lymph nodes.

Date (Received): 18 /4/2021

Date (reported): 5/5/2021

Lab. Number: 844 /21

Hospital Number:

Gross Description:

Received for frozen section: A fatty tissue piece measuring 8x1cm entangling soft rubbery 7 lymph nodes ranging from 0.3x0.3cm up to 1x1cm.

Microscopic picture:

Sections examined reveals preserved normal nodal architecture. The subcapsular sinuses are patent. The lymph follicles are hyperactive and have prominent germinal centers. There is no evidence of specific granuloma or neoplasia in sections examined.

Diagnosis:

Left breast sentinel lymph nodes.

Lymph nodes with reactive changes.

Negative for metastatic deposits (0/7).

Patient Name : نوره نجاح عبد العزيز

Age : 40 Y

Referred By Prof. Dr. : د. محمد احمد عزيز

Clinical Diagnosis : Left breast mass

Nature of Specimen : Excision

Receiving Date : 15/03/2021

Analysis ID :  537513

Gender : Female

Patient ID : 422086

PATHOLOGY REPORT

Gross :

Excision received consists of a piece of yellowish breast tissue measured 8x7x4.5 cm, covered by skin ellipse measured 4x1 cm. Cut section revealed firm gritty tumor with ill defined borders, measured 1.2x0.8x0.5 cm.
Free least surgical margin measured 0.3 cm

Histoscopic :

Sections examined from the specimen received revealed breast tissue showing tumor composed of irregular groups of malignant ductal cells showing moderate nuclear pleomorphism and hyperchromasia.

There is poor attempt at tubular formation.

There is moderate number of mitotic figures.

There is moderate desmoplasia.

There is peritumoral lymphocytic infiltration around 10%.

Lympho-vascular invasion is Present.

There is necrosis.

There is an intraductal component about 10% formed of dilated ducts with malignant lining showing solid pattern with central necrosis.

The surrounding breast tissue showed fibroelastosis.

The skin is free.

Surgical margins are free.

Diagnosis :

Left breast mass, Excision, INFILTRATING DUCT CARCINOMA GRADE II, INTRADUCTAL COMPONENT 10%, FREE SURGICAL MARGINS.

FIGO STAGE: T1c.

Patient Name: Norah Nagah Abdel Aziz Farag	Date : 09/10/2024
Exam : MAMMOGRAPHY BOTH	Age : 44 Year(s)
Medical ID: 1165/2021	Pat. ID: 13640

**BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION
ULTRASOUND**

Indication:

Follow up.

Report:

- ACR:8.

Right breast:

- No suspicious mass lesion or architectural distortion>>> confirmed by US.
- UOQ Intramammary lymph node confirmed by US, the above mentioned lesion about 2 cm from it.
- Right axillary non specific lymph node.

Left breast:

- Left breast UOQ focal area of parenchymal distortion owing to prior surgical interference, with post-operative scarring and diffuse edema pattern in the form of increased trabeculations and skin thickness.
- Complementary ultrasound showed left breast UOQ focal parenchyma distortion, owing to prior surgical interference with clear operative bed with no evidence of recurrent mass lesions.
- Single prominent left level I lymph node measuring 1.2X0.7 cm.
- Free left Infra and supra clavicular regions.

Opinion:

- Left breast focal parenchymal distortion owing to prior surgical interference (CBS) with post-operative sequel, with free operative bed with no evidence of recurrent mass lesions (BIRADS 2)
- Left axillary prominent lymph node for close follow up.
- Right breast benign finding (BIRADS 2).
