IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast mass.

Nature of Specimen: Tru-cut biopsy, collected at 22/10/2024

Technique:

- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9)

Results:

- IPT (Positive control showed appropriate reactivity).
- ER: No nuclear reaction in the tumor cells (score 0 /8).
- PR: Faint nuclear reaction in 1% of tumor cells (score 2 /8).
- Her2: Strong complete membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 23% nuclear reaction of tumor cells.

Conclusion:

Right breast mass, Tru-cut biopsy:
Invasive duct carcinoma G II.

IPT:

- ER: Negative (score 0 /8).
- PR: Negative (score 2 /8).
- Her2: Positive (score 3+).
- Ki67: Positive in 23% of tumor cells.

Scoring system: "ER, PR"

BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION ULTRASOUND

Indication:

Right breast lump

Technique

- Bilateral MLO and CC views
- Bilateral 3D MLO views DBT (Digital Breast Tomosynthesis)
- Bilateral breast ultrasound

Report:

- The breasts are heterogeneously dense which may obscure small lesions (ACR C)
- Right LO rather central posterior third high density irregular mass with indistinct margins showing coarse heterogeneous calcifications, extending beyond the mass and seen within the nipple, measured collectively 36x60mm.
- Complementary US showing hypoechoic irregular infiltrative lesion with indistinct margins, occupying right LOQ from 6 to 8 o'clock
- no left solid or cystic mass lesions, normal skin thickness and nipple-areola complex.
- Pathological right axillary level I,II and supraclavicular lymph nodes , largest seen at level I measures 17x11mm showing focal capsular rupture
- Nonspecific left axillary LNs.

Opinion:

- Right breast LOQ malignant looking mass with pathologically enlarged level I,II axillary and supraclavicular lymph nodes (BIRADS 5), for histopathological correlation
- Left breast normal findings (BIRADS 1)
