TRIPHASIC CT SCAN EXAMINATION OF THE ADOMEN AND PELVIS

❖ **FINDINGS:**

- The liver is hugely enlarged in size (Right lobe span = 314 mm) showing diffuse homogenous CT pattern with smooth outlines, seen studded by multiple innumerable variable sized hypodense focal lesions in both hepatic lobes displaying no appreciated enhancement in the three scan phases, largest lesion measured 41 x 29 mm in diameters.
- No CT evidence of intra or extra hepatic biliary radicle dilatation.
- Patent homogenously enhanced portal vein and its major divisions.
- Bilateral adrenal mass seen with no calcifications measuring 58 x 25 mm in right side and 40 x 35 mm diameters in left side.
- The spleen is average in size with no splenic focal lesions.
- Normal appearance of the pancreatic head, body and tail with no masses or cysts.
- A large Stag Horn stone seen casting the left pelvicalyceal system with mild left pelvicalyceal dilatation.
- No hyperdense stones or pelvicalyceal dilatation in right kidney.
- No ascites.
- Clear scanned lung bases.

❖ **OPINION:**

- Huge hepatomegaly with multiple focal lesions impressive of hypovascular metastasis.
- Bilateral adrenal masses, mostly metastatic.
- Left renal large Stag Horn stone with mild left hydronephrosis.

Best regards,

Dr. Ahmed Maher, MD
