**DIGITAL MAMMOGRAPHIC EXAMINATION AND COPPLEMENTARY
ULTRASOUND**

- Status post right mastectomy.

Right Mastectomy Side:

- Clear operative bed.
- No solid or cystic lesions.
- No axillary lymphadenopathy.

Left Breast:

- ACR B
- No spiculated mass lesions or suspicious microcalcifications.
- No solid or cystic mass lesions.
- Normal duct system.
- Normal skin thickness and nipple/areola complex.
- No pathological axillary LNs.

OPINION:

- Status post RIGHT MRM showing clear operative bed with no evidence of recurrent/residual suspicious lesions for follow up. BIRADS 2

Patient Name: نبويه عبد اللطيف جودد

Referred by Prof. Dr.: A. SHAWKY

Nature of the Specimen: RIGHT MRM

Clinical Diagnosis: MULTICENTERIC RIGHT BREAST CANCER

Receiving Date: Feb. / 2021

Code Number: A 55

PATHOLOGY REPORT

GROSS PATHOLOGY:

MRM specimen with skin surface area measured 25x15 cm including unremarkable nipple and areola. Serial cuts showed a fairly defined gray white mass measured 1.5x0.8 cm located 1.5 cm away from skin and 3 cm from least deep margin. As well as, a rubbery grayish white nodule measured 0.5x0.5 cm, located 1cm away from the mass.

Also, there was an indurated cystified area measured 4x2 cm, located 3 cm away from the mass and 2 cm and 1.5 cm from skin and deep least margin respectively. Dissection of axilla revealed 16 nodules up to 2x1.5 cm.

HISTOLOGY:

Sections showed multiple invasive malignant neoplasms disposed in nests, sheets and groups of moderately anaplastic ductal cells with poor tubular formation associated with 20% DCIS component, surrounded by desmoplastic stromal response. The nipple, areola and resection margins were free. The axillary nodes showed reactive changes and were free of deposits.

DIAGNOSIS:

MULTICENTERIC INVASIVE DUCT CARCINOMA G2 WITH 20% DCIS, NO EVIDENT LYMPHOVASCULAR OR PERINEURAL INVASION, FREE NIPPLE, FREE MARGINS, FREE AXILLARY NODES (0/16) (T1, N0).

P.O.:

- 1- Detection of ER, PR, Her-2 and Ki67 is available on request.
- 2- 5 Slides enclosed.

Primary Sample

Paraffin Block

Test

ER & PR & HER2 neu & Ki67 (ER&PR: Harvey scoring system - Her2neu : CAP scoring system)

Comment

Technique

sample recieved was treated by - CONFIRM anti-estrogen (ER) (SP1) Rabbit monoclonal primary antibody.- CONFIRM anti-progesterone receptor(PR) (E2) Rabbit monoclonal primary antibody.
Sample recieved was treated by - VENTANA anti-HER2/neu (4B5) Rabbit monoclonal primary antibody using DAB Detection kit in ventana benchmark GX.
Sample recieved was treated by - CONFIRM anti Ki67 (30-9) Rabbit monoclonal primary antibody

Result

ER: strong nuclear staining of > 60 % of tumour cells (tiny fragment)
PR: strong nuclear staining of > 60 % of tumour cells (tiny fragment)
HER2/neu protein over expression : NO membrane staining of tumor cells (tiny fragment).
Ki67: positive nuclear staining of 20 - 25 % of tumour cells (tiny fragment)

Referral Lab

Comment

Conclusion

ER: POSITIVE (SCORE 8 / 8)
PR: POSITIVE (SCORE 8 / 8)
HER2/NEU PROTEIN OVER EXPRESSION : NEGATIVE
#Ki67: THE PROLIFERATION INDEX OF THE TUMOUR IS 20 - 25 %

DXA Bone Densitometry Report: 11 March, 2023

Dear ??? ????

Your patient nabwea abd alltef completed a BMD test on 11/03/2023 using the Lunar Prodigy DXA System (analysis version: 12.30) manufactured by GE Healthcare. The following summarizes the results of our evaluation.

PATIENT BIOGRAPHICAL:

Name:	nabwea abd alltef,	Birth Date:	04/05/1942	Height:	158.0 cm
Patient ID:	(not specified)	Exam Date:	11/03/2023	Weight:	75.0 kg
Gender:	Female	Fractures:		Treatments:	
Indications:					

ASSESSMENT:

The BMD measured at AP Spine L1-L4 is 1.232 g/cm² with a T-score of 0.3. This patient is considered normal according to World Health Organization (WHO) criteria. Fracture risk is low.

With a Z-Score of 2.3, this patient's BMD is well above adult normal range for this age.

World Health Organization (WHO) criteria for post-menopausal, Caucasian Women:

Normal	T-score at or above +1 SD
Osteopenia	T-score between -1 and -2.5 SD
Osteoporosis	T-score at or below -2.5 SD

RECOMMENDATIONS:

All patients should ensure an adequate intake of dietary calcium (1200 mg/d) and vitamin D (400-800 IU daily).

FOLLOW-UP:

People with diagnosed cases of osteoporosis or at high risk for fracture should have regular bone mineral density tests. For patients eligible for Medicare, routine testing is allowed once every 2 years. The testing frequency can be increased to one year for patients who have rapidly progressing disease, those who are receiving or discontinuing medical therapy to restore bone mass, or have additional risk factors.

Based on these results, a follow-up exam is recommended in March 2025

Sincerely,

(not specified)
