ننشر بأن نوضح فيما يلي تقريراً عن حالته			
تاريخ وساعة الدخول :		تاريخ وساعة الخروج :	
وبعد الكشف والفحوصات والمتابعة وجد انه			
Premenopausal left-breast cancer, clinical stage T4BN2, triple-positive, was diagnosed. The patient received neoadjuvant chemotherapy followed by left modified radical mastectomy and subsequent hormonal therapy. A port was placed and the patient was started on PHESGO for one year. Brain imaging was negative. Laboratory results showed creatinine 0.7 mg/dL and CA 1.2 U/mL. The patient was prescribed Femara and Zometa on the day of the visit. The patient presented for administration of Femara and Zoladex for a three-month interval. She reported severe epigastric pain. The current regimen included Femara and Zoladex (10.8 mg) with a plan for supportive treatment for three months. The patient returned for Femara and supportive therapy for a three-month interval, and received Zoladex 10.8 mg as a baseline (BSM) injection. The plan indicated that the patient is post-menopausal (PAUS) and the right side is unaffected. The patient's follow-up in June 2026 confirmed that she remains post-menopausal and is free of disease. She will continue Zoladex and Femara for an additional three months.

Pathology Report

Clinical Data

Left breast mass

Nature of specimen

Revision of slides

Gross examination

One block (203720) & 3 slides were received .

Microscopic examination

* Histological type: Invasive duct carcinoma

* Grade (differentiation +nuclear pleomorphism+mitosis): (3+2+2) Grade II

* DCIS: No

* Angioinvasion: Could not be detected within the limits of biopsy received

* Perineural invasion: Positive

IPT :

ER: Moderate nuclear staining in 80% of tumor cells (7/8)

PR: Strong nuclear staining in 40% of tumor cells (7/8)

Her2: Strong complete membrane staining in >10 of tumor cells , score(+3)

Diagnosis

Left breast mass ; slide revision :

Invasive duct carcinoma, Grade II

positive perineural invasion

IPT :

ER: Positive (score 7/8)

PR: Positive (score 7/8)

Her2: Positive score(+3)

Pathology Report

Clinical Data: Left breast cancer (post NACT) .

Nature of the specimen: Left MRM

Gross Examination:

• Procedure: Left MRM

measured 21x19x5 cm with covering skin ellipse measured 21x14cm & attached axilla 7.5x6 cm .

- Tumor extent : A greyish white tumour bed site
- Size: 4.8x4x1.5 cm .
- Skin involvement: Nipple & areola were unremarkable grossly .
- Distance from margins: 3 cm away from deep margin
- Lymph nodes number and size: 15 L.Ns up to 2.5x1 cm .

Block designation:

1>5 TBS

6.Deep margin

7.N/A

8.>11 ALND

Grossing by : Dr.Menna Nabil

Microscopic examination:

- Histological type: No residual viable tumor tissue detected
- Ductal carcinoma in situ: No
- Skin involvement: Free nipple and areola
- Lymph node involvement: Free L.Ns (0/15), some showed therapy induced changes
- Resection Margins: Free margins
- Histologic response to therapy: Pathologic Complete response

Diagnosis:

Left MRM (post NACT) :

No residual viable tumor tissue detected.

Right Digital soft tissue mammography with high resolution sonography revealed:

Clinical summary: Post left MRM & ALAND, routine follow up.

Findings:

Right breast.

- Scattered fibro-glandular densities. (ACR b)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- Ultrasound demonstrated no solid or cystic lesions.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Left mastectomy bed.

- Clear mastectomy bed with no masses or fluid collections..
- Clear left axilla.

Conclusion:-

Right breast (BIRADS 1): normal study.
Clear left mastectomy bed and axilla.

Recommendation:-
For annual screening.

Best Regards,
DR. Amal Hegazi, M.Sc.

BIRADS classification of breast lesions according to the American College of Radiology used for breast assessment combined with recommendations:

Category & recommendations	Suspected Cancer Risk
BIRADS 0: Non-informative study.	
BIRADS 1: Normal study, routine screening	0 %
BIRADS 2: Benign findings, routine screening	0 %
BIRADS 3: Probably benign, for close follow up.	2 %
BIRADS 4: Probably malignant, for biopsy.	50 %
A: mild suspicion.	
B: moderate suspicion.	
C: high suspicion.	
BIRADS 5: Malignant, for biopsy.	98-100%
BIRADS 6: Pathologically proven malignant

Report:

99MTC-MDP BONE SCAN

Desired Information: -
skeletal survey.

Technique:

Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

Report:

No hot spot that account for osseous deposits could be detected all over the surveyed skeleton.

Degenerative changes are seen over dorso-lumbar vertebrae.

Arthritic changes are seen over both knees.

Both kidneys are normally visualized.

Conclusion:

No definite evidence of metastatic osseous deposits.

Trans-Thoracic Echocardiography Report

NAME	صباح عبد البصير	DATE	12/6/2025
------	-----------------	------	-----------

M-Mode Measurements

LVEDd	5.1	3.7 - 5.4 cm	FS	37	29 - 44 %
LVESd	3.2	2.2 - 4 cm	EF	66	65 - 76 %
IVS (d)	1.0	0.7 - 1.1 cm	AO	2.9	2.4 - 3.9 cm
PWT (d)	1.0	0.7 - 1.1 cm	LAD	3.9	2.5 - 4.0 cm

CHAMBERS

- **Left ventricle:**
 - NORMAL LV internal dimensions
 - No RWMA.
 - No LV masses (nor thrombi).
 - diastolic dysfunction grade I
- **Right ventricle:** Normal RV dimensions (cavity size & wall thickness) and systolic function.
- **Left atrium:** normal.
- **Right atrium:** Normal dimension.
- **SEPTA:** Intact inter atrial and inter ventricular septa.
- **VALVES**
 - **Mitral valve:** Normal morphology and flow.
 - **Aortic valve:** Normal morphology and flow.
 - **Tricuspid valve:** Normal morphology and flow
 - **Pulmonary valve:** Normal morphology and flow
- **CARDIAC MASSES:** No intra - cavitory masses or thrombi.
- **PERICARDIUM:** Normal (no apparent pathology).

Conclusion:

Within normal echo-study
