### Pathology Report

Clinical Data: Left breast cancer (post NACT) & Right breast lesion.  
Nature of the specimen: Left MRM&Right WLE&Right ALND

#### Gross Examination:

- Procedure: Left MRM&Right WLE&Right ALND

#### 1) Left MRM

measured 26x20x4 cm with covering skin ellipse measured 20x12cm & attached axilla 9x6 cm .

- Tumor extent : A greyish white tumour bed site
- Size: 4x2x2 cm .
- Skin involvement: Nipple & areola were unremarkable grossly .
- Distance from margins: 1 cm away from deep margin , 1.5 cm away from the skin .
- Lymph nodes number and size: 12 L.Ns up to 2.5x1 cm

#### 2) Right WLE&ALND

adeined rubbery to firm nodule 0.8x0.5 cm, 0.3 cm from inked lateral margin, rest of breast was fibrotic

\*ALND: Fibrofatty tissue 9x8 cm ,entangling 13 nodules up to 1 cm.

#### Microscopic examination:

#### Left breast:

- Histological type: No residual viable tumor tissue detected
- Ductal carcinoma in situ: No
- Skin involvement: Free nipple and areola
- Lymph node involvement: Free L.Ns (0/12)
- Resection Margins: Free margins
- Histologic response to therapy: Pathologic Complete response

#### 2) Right breast:

histopathological examination of sections prepared from the lumpectomy specimen received reveals a benign growth made up of proliferating mammary ducts which are

### Pathology Report

compressed and distorted. The ducts are lined by inner columnar and outer myoepithelial cells. The stroma in between is formed of dense fibrous connective tissue. There is no evidence of malignancy in sections examined

\*Complete pathological response in single axillary lymph node, no viable tumor tissue (0/13)

#### Diagnosis:

Left MRM ( post NACT ):

No residual viable tumor tissue detected.

\* Free margins

\* Free nipple and areola

\* Free L.Ns (0/12)

\* Pathologic Complete Response

\* Stage : ypT0 , ypN0

Right WLE&ALND:

Intracanalicular fibroadenoma

complete pathological response in single axillary lymph node, no viable tumor tissue (0/13)

Comment: for correlation with right breast imaging findings to confirm origin of right axillary lymph node tumor

$Tc^{99m}$  MDP whole body bone scan

History:

43-year-old patient, recently diagnosed breast cancer. For metastatic work-up.

Technique:

Whole body anterior and posterior blood-pool and delayed 3 hours scans were taken after IV injection of 20 mCi of  $Tc^{99m}$  MDP.

Findings:

Bone lesions:

An area of focal warm tracer uptake is seen at the left 5th rib anteriorly and posteriorly. Otherwise, homogenous tracer distribution through the rest of the surveyed skeleton.

Other findings:

Left breast diffuse warm tracer uptake.  
Both kidneys are visualized.

Impression:

Left 5th rib area of warm tracer uptake, likely benign traumatic in nature. Otherwise, the surveyed skeleton is free from metastatic osseous deposits.

By: Hanan Hussein, MSc

Reviewed by: Dr Mennatallah Hatem, MD.

BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION ULTRASOUND

Indication:

Left breast pathologically proven carcinoma with ipsilateral proven bilateral metastatic axillary LNs on neoadjuvant therapy

Technique

- Bilateral MLO and CC views
- Bilateral 3D MLO DBT (Digital Breast Tomosynthesis)
- Bilateral breast ultrasound

Report:

- Heterogeneous dense parenchyma (ACR C)
- Left axilla patient (increased skin thickening and coarse trabeculation)
- Left breast metastatic nodules
- No right axillary lymph node enlargement or metastatic disease

Comparison with previous:

- Left axilla metastatic nodules measuring about 4.5x3.5cm
- Left breast metastatic nodules measuring about 3.5x1.5cm compared to 4.5x3.5mm
- Right 6 O'clock adenitic nodule measuring about 9x6mm
- Normal right skin thickness, and nipple-areola complex with average caliber of the retro-areolar central ducts.
- Multiple left axillary enlarged LNs with non uniform cortical thickening and effaced fatty hilum
- Nonspecific right axillary LN.

Opinion:

- Left retroareolar mass showing partial response to therapy (BIRADS 5)
- Left axilla pathological LNs showing partial response to therapy
- Right axilla complete radiological response to therapy
- Right 6 O'clock adenitic nodule (BIRADS 2)

Yours truly
