| <p>The patient is a 47-year-old with luminal, left-sided breast cancer who has previously received four cycles of AC (doxorubicin and cyclophosphamide) followed by four cycles of TAXOL (paclitaxel). Metastatic disease to bone was identified, and the patient was placed on ARAMIDEX (anastrozole) with supplemental therapy. On the day of evaluation, ZOLADEX (goserelin) was administered for a new assessment in conjunction with cardiac stress testing (CTS) and bone scan (BS). The patient has therefore completed four cycles of AC and four cycles of TAXOL.</p> <p>A repeat bone scan performed on 26-June-2026 was compared with the scan from November-2025, showing stable sclerotic lesions at L4 and a lytic lesion of benign appearance. Additional imaging on 1-June-2026 confirmed that the sclerotic and lytic lesions have remained stable over six years, suggesting a benign etiology and potential eligibility for surgical intervention. However, the patient has laryngeal problems that preclude general anesthesia, making surgery currently unsuitable. The treatment plan continues with ZOLADEX, ARAMIDEX, and supplemental therapy for an additional three months.</p> |                       |                                                                                     |

| Patient Name: Samiha Fat'hy Sharobim       | Date : 11/12/2022 |
| Exam : C.T. ABDOMEN & PELVIS WITH CONTRAST | Age : 43 Year(s)  |
| Medical ID:                                | Pat. ID: 12761    |

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN & PELVIS REVEALED: -**

**Follow up for a case of breast cancer, as compared to last study dated 06/06/2022.**

**1. Chest:**

- Stationary course as regards the size of the:
  - Left breast , laterally located skin-attached mass lesion, currently still measures about 2.1 x 1.5 cm.
  - Few prominent left axillary lymph nodes ,largest still measures 1.5 x 0.9 cm.
- No current sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No pathological hilar or mediastinal lymph nodes.
- No evidence of pleural effusion.
- Normal cardiac size. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

**2. Abdomen and pelvis:**

- The liver is of average size with homogenous CT texture. No focal lesions or contour irregularities. No Intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular out pouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic lymphadenopathy or collections.
- **Again noted lower uterine contraceptive device.**
- Scanned skeletal portions revealed:
  - **Stationary course of the previously noted Mild Sclerotic transformation** of the previously noted Sternal and L4 lytic osseous lesions.

**OPINION:**

- ***Follow up post-therapy status showing over-all stationary course as described above.***

**Dr. Mohammed Mohsen, MSc**

**Dr. Amr Farouk, M.D.**

|            |                                     |
|------------|-------------------------------------|
| DS: 3DC 62 | SM:                                 |
| HG: 8/8    | Mets Workup: base line sternal & LH |
| PR: 1/2    | C.T CAP likely mets                 |
| Hcy: 1/2   | Bone scan - free                    |
| KIV: 1/2   |                                     |
| T N M      |                                     |

## COMMENT:

pt received 4 cycles AC + 4 cycles THT  
C.T CAP 15/12/18 (1) Reg Course of  
11 breast mass 2.4x1.5cm vs 4.8x3.5cm  
4 ALNs 2.3x1.5cm vs 3.2cm  
(2) sclerotic transformation of the sternal  
d/Ly lytic osseous lesion (reg)

## MDT OUTCOME & PLAN

## Primary Sample

Specimen Block

ES1

ER & HER2 neu & Ki67 (ER&PR, Harvey scoring system, Her2neu, CAP scoring system)

## Comment

### Technique

Slide received was treated by: CONFIRM anti-estrogen (ER) (SP1) Rabbit monoclonal primary antibody - CONFIRM anti-her2neu receptor (PR) (H2) Rabbit monoclonal primary antibody  
Slide received was treated by: VENTANA anti-HER2neu (4B5) Rabbit monoclonal primary antibody using DAB Detection  
in Ventana Benchmark GX  
Slide received was treated by: CONFIRM anti Ki67 (30-9) Rabbit monoclonal primary antibody

### Result

- ER: strong nuclear staining of 60 % of tumour cells
- PR: strong nuclear staining of 60 % of tumour cells
- HER2neu protein over expression: discontinuous membrane staining of tumor cells
- Ki67: positive nuclear staining of about 30 % of tumour cells

## Referral Lab

## Comment

### Conclusion

- ER: POSITIVE (SCORE 8/8)
- PR: POSITIVE (SCORE 7/8)
- HER2neu PROTEIN OVER EXPRESSION: NEGATIVE (SCORE 1+)
- THE PROLIFERATION INDEX OF THE TUMOUR IS ABOUT 30 %
- (BIOPSY)
