Pathology Report

Clinical Data: Left breast cancer, Up-Front.

Nature Specimen: Left breast conservative surgery including nipple & areola complex.
Extra-lateral margin & Lymph nodes sampling.

Gross Examination:

- Procedure:
 - Left BCS including nipple & areola complex: A labelled fibrofatty tissue piece measured 7x6x3 cm, with covering skin ellipse measured 6.5x3.5 cm, showing unremarkable nipple & areola.
 - Tumor extent: A greyish white mass.
 - Size: 2.5x1.7x1 cm.
 - Skin: Looked unremarkable grossly.
 - Distance from margins: Less than 0.1 cm away from the least lateral margin, 0.4 cm from inferior margin, 1 cm from superior margin & 1.5 cm from both (medial & deep) margins.
 - Extra-lateral margin: Fibrofatty tissue piece measured 6x4x2cm, looked unremarkable grossly.
 - Lymph nodes: Fibrofatty tissue pieces, collectively measured 4.5x4.5 cm, entraining 11 lymph nodes, up to 1.5x1x0.5 cm (Only six were submitted for frozen & the rest were for paraffin).
- 11 Blocks:
 - 1&2- Mass., 3- N&A., 4- Medial margin., 5- Lateral margin., 6- Superior margin., 7- Inferior margin., 8- Deep margin., 9- Extra-lateral margin., 10- Frozen submitted lymph nodes., 11- Rest of lymph nodes.
- Frozen Results:
 - Free extra-lateral margin & free other surgical margins.

ننشرف بأن نوضح فيما يلي تقريراً عن حالته			
تاريخ وساعة الخروج :		تاريخ وساعة الدخول :	
وبعد الكشف والفحوصات والمتابعة وجد انه			
The patient underwent postoperative left breast cancer treatment with left breast-conserving surgery performed on 24/7/2024. Pathology was reported as pT2 N1, estrogen receptor (ER) 8/8, progesterone receptor (PR) 8/8, HER2-negative. The record indicates a recommendation for adjuvant endocrine therapy (AI) with arimidex and bisphosphonate therapy with zometa following a dental examination, and a new staging mammography computed tomography (SM CT) of the chest was ordered. The plan is to continue arimidex together with supportive care for a duration of three months; the most recent bone scan was performed in February 2025, and an annual assessment is scheduled.

Pathology Report

- * Positive metastatic deposits in two out of six submitted lymph nodes for frozen.

Microscopic Examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation):

• Ductal carcinoma in situ: Focally detected

- Ductal carcinoma in situ: focally detected.
- Nipple & areola: Engorged.

Nipple & areola: Free.

* Resection margins: Free extra-lateral margin & free other surgical margins.

* Lymph nodes: Positive metastatic deposits in two out of eleven lymph nodes, L.Ns (2/11), with extra-nodal extension.

Diagnosis:

Left breast conservative surgery including nipple & areola complex, Extra-lateral margin & lymph nodes sampling; Up-front:

Lymph nodes sampling: Up-front:

Invasive duct carcinoma, Grade II, with focal DCIS
- Resection Margins: Free

- Resection Margins: Free extra-lateral margin & free other surgical margins.
- Nipple & areola: Free.

- Nipple & areola: Free

- Lymph nodes: Positive metastatic deposits in two out of eleven lymph nodes, L.Ns (2/11), with extra-nodal extension.
- Stage: pT2-4, N1, M0

• Stage: pT2, pN1a.

حرفه رقم (4) - الدور الأول - مبنى رقم (987) - كورنيش النيل - مصر الجديدة - القاهرة - مصر
 Room No. (4) - First Floor-Building No. 987- Nile Corniche - Misr El Qadima - Cairo, Egypt

Name: Hamida Mahmoud Ali.

Date: 23 June 2024

Known case of left breast cancer, for metastatic workup, revealed:

Post contrast CT scan of the chest revealed:

- Clear both lung fields with no parenchymatous infiltration, consolidation patches or mass lesions seen.
- Left breast speculated soft tissue mass lesion, measuring about 26 x 18 mm in diameter.
- Bilateral axillary reniform shaped LNs are seen, still showing central hypodense fatty hilum.
- No gross hilar or mediastinal glandular enlargements.
- No pleural collections or masses seen.
- No gross cardiac abnormality.
- No pericardial collection seen.

CT scan of the abdomen and pelvis with oral and IV contrast revealed:-

- The Liver is average in size with non-uniform attenuation, due to presence of right hepatic lobe subcapsular segment VI enhancing focal lesion is seen, measuring about 23x 18 mm in axial diameters, showing rapid filling in during arterial phase and rapid washout in delayed phase, suggestive of metastatic lesion. No intra or extra hepatic biliary radicle dilatation, patent main portal vein and its central branches.
- The spleen is average in size with no focal lesions.
- Normal CT appearance of the pancreas, kidneys, aorta & IVC.
- No suprarenal masses seen.
- No CT evidence of porta-hepatis or para-aortic lymph node enlargement.
- No ascites.

- Free flow of the oral contrast through different bowel segments with no obstruction seen.
- The urinary bladder shows no stones or masses.
- Normal appearance of the rest of the pelvic organs.

Opinion:-

- *Known case of visualized left breast cancer, with no pulmonary metastatic nodules or mediastinal LNs.*
- *Right hepatic lobe focal lesion, likely metastatic, for alpha fetoprotein correlation and follow up.*

MUCH OBLIGED,
Dr. H,..AL Enanay,..FEBR
