تقرير طبي

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من	**بشأن تقرير طبي للمريض**
بقسم:	**رقم طبي:**

نتشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول : -- --:-- yyyy-mm-dd	**تاريخ وساعة الخروج :** PM 01:17 05-07-2026

وبعد الكشف والفحوصات والمتابعة وجد انة

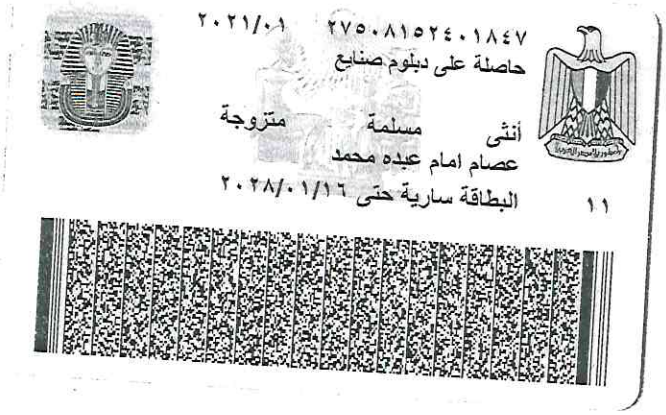

المريضة تعاني من ورم غير حميد بالثدى و تحتاج الي **Bone scintigraphy**

التاريخ : **05-07-2026**	**الوقت :** -- --:--
	الطبيب المعالج : د/شيماء لاشين

Patient's Name:	**Nadia Ahmed Abdel Ala Al-Sayed**
Date:	**2026-07-25**
Referred by:	Prof.Dr. **no doctor**
Hospital:	**Goustave Roussey International Egypt**

Bilateral Digital soft tissue mammography with high resolution breast :sonography revealed

Clinical summary: 50-year-old female with right breast palpable lump

Findings:

Right **breast.**

- Scattered fibroglandular densities. (ACR b)
- UOQ, posterior third irregular high density mass lesion with distortion
- UOQ two intra mammary nodes
- **Ultrasound** demonstrated shows multiple irregular hypo echoic solid lesion seen between 9-10 o'clock along ducts with prominent ducts ?? ducatal extension
- at outer third, 7 cm from nipple, 6 mm deep to the skin, internal vascularity on color Doppler study measuring 20x17mm.
- **at middle third, 3 cm from nipple, 6 mm deep to the skin, internal vascularity on color Doppler study measuring 13x14mm.**
- **at inner third, 2 cm from nipple, 6 mm deep to the skin, internal vascularity on color Doppler study measuring 10x7mm.**
- **Corresponding to Mammo two intra mamary nodes seen at 10 and 11 oclock zone c measuring 13x6mm and 14x5mm with focal coartical thickening 5mm**
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs..

left **breast.**

- Scattered fibroglandular densities. (ACR b)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Conclusion: -

- Right ***breast (BIRADS 4c): Multiple malignant looking lesion with two pathological intra mammary nodes for biopsy***
- left ***breast (BIRADS 1): Normal study.***

Best Regards,

DR. Marwa M.Hassan

Patient Name	ناديه احمد عبد العال	**Case No.**	**347267**
Sex/Age	**Female 51 Y**	**Patient No.**	**25708**
Registered Date	**10/8/2026 02:21:31 PM**	**Referred By Dr.**	**Interventional Radiology**
Validation Date	**13/9/2026 03:45:34 PM**	**Branch**	**Gustave Roussy**
Reporting Date	**13/9/2026 03:57:35 PM**	**Pathology No.**	**2523/26**

Pathology Report

Clinical Data: Right breast mass with two pathological intramammary lymph node biopsy. BIRADs 4c.

Nature of Specimen:
1- Right breast mass, Tru-cut biopsy, collected on 10/08/2026, Cold ischemia time: 20 seconds.
2- Right intramammary lymph node, Tru-cut biopsy, collected on 10/08/2026, Cold ischemia time: 20 seconds.

Gross Examination:
Two containers were received, designated as follow:
1- Right breast mass: Fragmented grey, white tissue cores, ranging in size between 0.3 & 0.8 cm long, totally submitted.
2- Right intramammary lymph node: Fragmented grey, white tissue cores, ranging in size between 0.5 & 1.0 cm long, totally submitted.

Technique:
- Sections prepared from paraffin block of right breast mass for immune-staining using Benchmark ULTRA system for;
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), P63 clone (4A4) & Ki67 clone (30-9).

Microscopic Examination:
1- Right breast mass:
- **Histologic type:** Invasive duct carcinoma (Tubular & cribriform).
- **Histologic grade: 1** (Differentiation 1, pleomorphism 2, mitosis 1)
- **DCIS:** No significant DCIS component.
- **Angioinvasion:** Absent.
- **Perineural invasion:** Absent.
- **Tumor infiltrating lymphocytes (TILs):** Mild.

Results:
*** IPT (All controls showed appropriate reactivity):**
- P63: Negative.
- ER: Strong nuclear reaction in 100% of tumor cells (score 8/8).
- PR: Strong nuclear reaction in 100% of tumor cells (score 8/8).
- Her2: Faint incomplete membrane reaction in more than 10% of tumor cells (score 1+).
- Ki67%: 10%.

2- Right breast intramammary lymph node:
- Histopathological examination showing reactive lymphoid tissue cores. No evidence of metastatic deposits in sections examined.

Diagnosis:
Right breast mass with intramammary lymph node, Tru-cut biopsies:
1- Right breast mass:
- Invasive duct carcinoma (Tubular & cribriform), Grade 1.
IPT:
- ER: Positive (score 8/8).
- PR: Positive (score 8/8).
- Her2: Low (score 1+).
- Ki67%: 10%.

2- Right intramammary lymph node:
- Consistent with reactive lymphoid tissue cores.
- No metastatic deposits.

* Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66%
and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, week, 2, intermediate; and 3, strong). Total score from 0 to 8.
* Scoring system: "Her2"
Reference: ASCO-CAP Her2 Test Guideline Recommendation. IHC 0 (Null): as defined by no staining observed. IHC 0+ (Ultra-low) as defined by membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within > 10% of the invasive tumor cells.
IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within >10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is complete, intense > 10% of tumor cells.
