Pathology Report

Clinical Data : Right breast cancer, Post NACT
Nature of the specimen : Right BCS & Right SLN biopsy

Gross Examination:
• Procedure: Right BCS specimen measured 12x10x2 cm , covering skin ellipse measured 5 x 1 cm .
• Tumor extent : A well defined greyish white TBS measured 1.7x1x1 cm .
• Distance from margins:1 cm away from lateral margin
• Lymph nodes number and size: A fibrofatty tissue piece measured 5x4x1 cm enclosing 4 SLNs up to 1.5x1 cm .
•Block designation:
1.superior
2.Inferior
3.Lateral
4.Medial
5 .Deep
6,7.TBS
8,9.SLNS
Grossing by : Dr.Heba Hassan

Microscopic examination:
Histological type: No residual tumor
Angioinvasion:No
Ductal carcinoma in situ: No
Lymph node involvement: Free SLNs (0/4)
Resection Margins: Free margins
Additional pathologic findings: Positive microcalcification

Verified by :
Dr.Heba Hasan

Detailed Medical Report

السيد	

تحية طيبة وبعد,,

إيماء للطلب المقدم من		بشأن تقرير طبي للمريض	
بقسم:		**رقم طبي:**	

نتشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انه

The patient received seven cycles of phesgo, with the last cycle administered in November 2025; treatment was subsequently delayed pending approval from the Ministry of Health. The most recent echocardiogram performed in November 2025 demonstrated a left ventricular ejection fraction of 64 %. For cycle 8, the plan is to continue phesgo together with Arimidex and supportive therapy. A chest X-ray was reported as clear, and other assessments remain pending. The patient reports headache and blurred vision, prompting a request for brain MRI. The patient has completed seven cycles of phesgo.

Brain MRI performed on 15 April 2026 was reported as free of significant abnormality. A subsequent chest X-ray on 4 April 2026 was also clear. The patient discontinued phesgo five months ago and is currently receiving Arimidex with supportive treatment for three months.

Patient Name: Hanan Hassan Ibrahim Al Leithy	Date : 11/12/2024
Exam : C.T CHEST WITH CONTRAST	Age : 56 Year(s)
Medical ID: 4209/2024	Pat. ID: 95292

POST-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN AND PELVIS:

- Reported case of right breast cancer.

I Chest:

- *Right breast is partially out of exam field. It shows small parenchymal soft tissue lesion measures about 1.5 cm smaller related similar lesion is noted.*
- *Small bilateral axillary (level I) lymph nodes, the largest one at the right measures about 1.2 cm and at the left measures about 1 cm.*
- Left basal posterior pulmonary nodule measuring 5 mm.
- Prominent subcentimetric mediastinal lymph nodes.
- No pleural or pericardial collection, pleural thickening or masses.
- No cardiac gross enlargement.

II Abdomen & pelvis:

- Enlarged liver showing homogenous parenchymal low attenuation (fatty hepatomegaly). No sizable focal lesions.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Calcular gall bladder.
- Normal CT appearance of the spleen, pancreas, kidneys, suprarenal glands, aorta and IVC.
- Averagely filled urinary bladder showing no sizable diverticular outpouching.
- Prominent porta-hepatis, porto-caval, para-aortic, aorto-caval and bilateral external illac lymph nodes, the largest one seen at porta-hepatis region measures about 1.5 x 1 cm.
- No ascites.
- No sizable worrisome osseous lesions.

Opinion:

Reported case of right breast cancer revealed:

- No sizable pulmonary or hepatic metastatic deposits.

^{99m}Tc-MDP whole body bone scan

Desired information:

- Skeletal surveying

Technique:

- Anterior and posterior Delayed Whole body bone scan performed 2 hours after I.V administration of 20 mCi 99mTc-MDP;

Report:

Delayed static phase:

- Warm uptake at the sernum of unascertained nature for follow up.
- Degenerative changes are noticed in the dorsal &lumbar vertebrae.
- Arthritic changes at both shoulder and knee joints.
- There is no hot spot that account for osseous deposits could be detected allover the surveyed skeleton.
- Both kidneys are visualized.

Conclusion:

- *The surveyed skeleton is free from definite osseous deposits or serious bone lesions.*
- *Spondylo- degenerative changes at the spine and big joints.*

Best regards;
Dr. Huda Fathy M.D.

Combined bilateral breast mammography and complementary ultrasound

Indication:

RIGHT breast pathologically proven malignant mass WITH OVERLYING INSERTED CLIP on NACT for assessment.

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR A)
- RIGHT breast shows UOQ irregular RESIDUAL mass lesion, of equal density, with clip seen within.
- Complementary right ultrasound revealed RIGHT breast residual irregular spiculated isoechoic mass lesion, seen at axillary tail with overlying inserted clip , the residual lesion measures about measuring 12 x 10 mm (was 20 x 19 mm , in prior study dated 4 / 11/ 2024), right enlarged axillary LN with preserved fatty hilum
- No left breast solid or cystic masses
- Normal skin thickness, and nipple-areola complex of the right breast.
- Left sided Nonspecific axillary LN,
- Free infra and supra-clavicular regions.

Opinion:

- Partial radiological response of the right breast axillary tail malignant mass with overlying inserted clip , as mentioned above (BIRADS 6)
- Benign findings right breast (BIRADS 2)

Mammogram
[[DOCTYPE:MAMMOGRAM]]

Patient's Name:	HANAN HASAN IBRAHIM
Date:	2026-04-15
Referred by:	Prof.Dr.
Hospital:	Goustave Roussey International Egypt

Bilateral Digital soft tissue mammography with high resolution breast sonography revealed:

Clinical summary: Status post right CBS & ALAND, followed by radio therapy, routine follow up study.

Findings:

Right breast.

- Almost entirely fatty breast parenchyma. (ACR a)
- Thickened skin and coarsen trabeculae.
- UOQ, architectural distortion with no speculations, masses, asymmetry, or suspicious microcalcifications.
- Ultrasound demonstrated UOQ area of parenchymal disruption underneath the operative scar with no solid, cystic lesions or fluid collections.
- Thickened skin and coarsen trabeculae.
- Clear right axilla. No pathological infra or supra-clavicular lymph nodes

Left breast.

- Almost entirely fatty breast parenchyma. (ACR a)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- Ultrasound demonstrated no solid or cystic lesions.
- Normal skin, nipple/areola.
- Non-specific axillary LNs.

Conclusion: -

Right breast (BIRADS 2): Post-Therapeutic sequalae.

Left breast (BIRADS 1): Normal study

Recommendation: -

For annual follow up.

Best Regards,

DR. Amal Hegazi, M.Sc.

MRI EXAMINATION OF THE BRAIN

Technique:

- Axial T1, T2, FLAIR
- Coronal T2
- Sagittal T1
- Axial DWI and ADC
- Postcontrast T1

Findings:

- No cerebral, cerebellar or brain stem areas of altered MR signal.
- Normal size and configuration of the supra and infra tentorial ventricular system.
- No midline shift or deformity.
- No extra axial collections or masses.
- No cerebello pontine angle masses.
- No gross posterior fossa abnormalities.
- Intact cervico medullary junction.
- Bilateral maxillary sinusitis.

OPINION:

➢ **Normal MRI of the brain.**

GUSTAVE ROUSSY INTERNATIONAL EGYPTE

Patient Name: Hanan Hassan Ibraheem	Date : 16/07/2026
Exam : Plain CXR	

Plain X-ray **Chest** (PA view) revealed:

- *Increased Broncho vascular Markings*
- *Clear both costo-phrenic angles.*
- *Normal cardiac size & configuration.*
- *Normal thoracic cage*

Best Regards,

Dr/ Nermeen Ramadan MD

GUSTAVE ROUSSY INTERNATIONAL EGYPTE

Patient Name: Hanan Hassan Ibraheem	Date : 16/07/2026
Exam : Ultrasound ABDOMEN& PELVIS	

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- *Enlarged in size (18cm at Rt MCL)homogenous parenchymal echo pattern*
- *No IHBRD seen*
- *Portal vein is patent and not dilated.*

Gall Bladder: -

Distended with Multiple stones smallest measuring 0.8cm

CBD normal

Spleen: -

- *Boraerline measuring 11 cm, homogenous texture with no focal lesions*

- **Kidneys: -**
  - *Both kidneys of normal size, shape, normal echogenicity and well differentiated with good corticomedullary differentiation.*
  - *No stones no back pressure changes*

***Para-aortic and pancreatic area**: concealed by gaseous distention*

Urinary Bladder: -

- *Minimally Filled with no stones or masses*

Opinion:

Significant Colonic Gaseous Distention

Hepatomegaly showing Bright color Likely Fatty

Calculus Gallbladder

GUSTAVE ROUSSY
