Detailed Medical Report

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من		**بشأن تقرير طبي للمريض**	
بقسم:		**رقم طبي:**	

ننشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انه

Post-mastectomy breast cancer, clinical stage ct4b, N3, with a 2 cm IDC, ER 8/8, PR 8/8, HER2 3+, Ki-67 30%. The patient received trastuzumab on 30/09/2023, followed by a right mastectomy and reconstruction with a port. Adjuvant therapy included femara and Kadcyla, with a planned schedule of 9 months of Kadcyla (SM 9/2025). The patient is currently free for Zopmeta and has received three cycles of femara.

Exam : C.T CHEST WITH CONTRAST	Age : 55 Year(s)
Medical ID:	32336

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN & PELVIS REVEALED: -

A known case of right breast cancer.

1. *Chest:*

- Right breast LIQ irregular speculated mass lesion measuring 3.8 X 3.3 cm.
- Right axillary level I and II pathologically enlarged lymph nodes the largest measures 2 x 2.1 cm.
- Prominent right internal mammary lymph nodes measuring 0.8 cm.
- Bilateral few scattered pulmonary nodules, the largest is noted at apical segment of right lower lung lobe measuring 5 mm.
- Middle lobe medial segment partial collapse.
- No pathological hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Average cardiac size. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

2. *Abdomen and pelvis:*

- The liver is mildly enlarged with homogenous CT texture. No definite focal lesions or contour irregularities.
- Patent homogenously enhancing portal vein and is main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Cholecystectomy with operative bed clips. No collection.
- Prominent porta hepatis lymph nodes, the largest measuring about 1.2 x 1.6 cm.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- No pathological abdominal or pelvic lymph nodes.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both supra-renals.

Presidential Program for Women's health

Name: Soad Sayed Ahmad

Date: 11/3/2023

Bilateral Full field Digital Mammography

Technique

Mediolateral oblique and CC views.

High resolution ultrasound

Detailed Findings

left breast

- Scattered fibroglandular mammary parenchyma (ACR B).
- No masses, asymmetric densities, distortion or suspicious clusters of microcalcifications.
- Ultrasound demonstrated no solid or cystic lesion.
- Normal skin/nipple/areolar complex.
- Preserved axillary LNs.

right breast

- Scattered fibroglandular mammary parenchyma (ACR B).
- UIQ ill defined density.
- Ultrasound demonstrated 3-4 o'clock zone A an ill defined spiculated mass lesion measuring 40x23.5mm 3 mm from skin with evidence of micro calcifications and evidence of ductal extension.
- retracted nipple
- pathological axillary LNs at level I and II(more than 3) largest is measuring 18.3X13mm (eccentric hilum and diffuse cortical thickness).

Conclusion:

-left breast: (BIRADS 2) adenosis

-Right breast: (BIRADS 4C) UIQ malignant looking mass lesion and ipsilateral pathological LN for biopsy

NUCLEAR MEDICINE UNIT

Patient Name: Soad Sayed Ahmed *Date:27/5/2023*

^{99m}Tc-MDP BONE SCAN

Desired information : skeletal surveying to detect multiple lesions.

Technique: Anterior and posterior whole body scan performed 2 hours after I.V administration of 20 mCi ^{99m}Tc-MDP:

Report:.

- No definite evidence of hot or cold spots that would account for metastatic bone lesions.
- Degenertaive changes are noted in the dorso-lumbar vertebrae.
- Both kidneys are normally seen.

Conclusion:

No definite evidence of metastatic osseous deposits.

Thanks for reference

Pathology Report

Diagnosis:
Right breast cancer post NACT, MRM specimen:
Invasive duct carcinoma G II (<5% cellulaity, Max tumour diameter 0.1x0.1 cm).
* Free nipple and areola.
* Lymph nodes were positive in 1/13 with no extracapsular extension.
* Free deep margin.
* Partial pathological response to therapy.
- Stage: ypT1a, ypN1.
- RCB: 2.15, RCB class II .

Pathology Report

Clinical Data: Right breast cancer, post NACT.

Nature Specimen: Right modified radical mastectomy specimen.

Gross Examination:
* Procedure: Right MRM measured 24x20x6 cm with covering skin ellipse measured 20x17 cm.
* Tumor extent: A greyish white firm tumor bed site at UIQ.
* Size: 2.5 x2 cm.
* Skin involvement: Nipple & areola were unremarkable grossly.
* Distance from margins: 2cm away from deep margin.
* Lymph nodes number and size: Axilla measured 10x8 cm: Axillary dissection entangling 13 nodules up to 1.5x1 cm.

Microscopic Examination:
* Histological type: Invasive duct carcinoma.
* Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- Maximal tumor diameter 0.1x0.1 cm
- Actual tumor cellularity: <5%, tumor necrosis index: 95%
* Ductal carcinoma in situ: No.
* Perineural invasion: No.
* Lymphovascular emboli: Occasional.
* Skin involvement: Free nipple and areola.
* Lymph node involvement: 1/13 with no extracapsular extension. lymph nodes showed therapy response.
* Resection Margins: Free deep margin.
* Histologic response to therapy: Partial pathological response.
* Microcalcifications: N/A.

Patient's Name: **Soad** **Said Ahmed Mostafa**

Date: **2026-09-06**
Referred by: Prof.Dr. **no doctor**
Hospital: **Goustave Roussey International Egypt**

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- *Average in size (15cm at Rt MCL) bright parenchymal echo pattern with smooth surface.*
- *No hepatic focal lesions or intra hepatic biliary radicle dilatation.*
- *Portal vein is patent and not dilated.*

Gall Bladder: -

- not visualized (contracted)
- *CBD is not dilated.*

Spleen: -

Average size , homogenous.

- **Kidneys: -**
- *Both are average in size,shape and echogenicity*
- *No stones or dilated pelvicalyceal system*
- *left parenchma hyper echoic lesion measures 10x9mm*

Para-aortic and pancreatic area*: show no gross abnormalities.*

No ascites

Urinary Bladder: *-*

- *Not distended enough however no stones or diverticular out pouching*

Uterus and adnexal *; no abnormalities could be detected*

Opinion:

Bright liver likely fatty
Left renal benign looking lesion likely angiomyolioma
Colonic gaseous distention

DR: Nermeen Ramadan.MD

جوستاف روسي انترناشونال مصر

Left Digital soft tissue mammography with high resolution sonography revealed:

Clinical summary: Status post right MRM & ALAND, followed by hormonal therapy for two years, routine follow up.

Findings:

Left breast.

- Scattered fibro-glandular densities. (ACR b)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Right mastectomy bed.

- Clear mastectomy bed with no masses or fluid collections..
- Clear right axilla. No pathological supra or infra-clavicular lymph nodes.
-

Conclusion:-

- ***Left breast (BIRADS 1): normal study.***
- ***Clear right mastectomy bed and axilla.***

Recommendation:-

- ***For annual follow up.***

Best Regards,

DR. Nehal Fouda,MD
