تقرير طبي

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من	بشأن تقرير طبي للمريض
بقسم:	رقم طبي:

نتشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول : -- --:-- yyyy-mm-dd	تاريخ وساعة الخروج : PM 01:17 05-07-2026

وبعد الكشف والفحوصات والمتابعة وجد انة

المريضة تعاني من ورم غير حميد بالثدى و تحتاج الي Further investigations and imaging

التاريخ : 05-07-2026	الوقت : -- --:--

Detailed Medical Report

السيد	

تحية طيبة وبعد,,

إيماء للطلب المقدم من		**بشأن تقرير طبي للمريض**	
بقسم:		**رقم طبي:**	

ننشرف بأن نوضح فيما يلي تقريرا عن حالتها

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انها

The patient presented for continuation of endocrine therapy with letrozole (Femara) and received a depot injection of goserelin (Zoladex) 10.8 mg, intended for a three-month supportive treatment interval.

The patient is a 48-year-old individual with a history of breast cancer diagnosed in 2015, initially triple-negative and treated with left breast-conserving surgery followed by adjuvant chemotherapy (FAC ×3, docetaxel ×3) and postoperative radiotherapy. In August 2022, an ipsilateral invasive breast tumor recurrence was identified after a one-year loss to follow-up; biopsy revealed hormone-receptor-positive, HER2-positive disease (triple-positive). Neoadjuvant chemotherapy was administered in 2023, after which a left modified radical mastectomy was performed in February 2024 with pathological complete response. Multidisciplinary planning recommended chest-wall irradiation, anti-HER2 therapy with Phesgo for one year, and endocrine therapy consisting of an aromatase inhibitor plus goserelin. Since March 2024 the patient has been receiving goserelin and letrozole, with the current prescription covering a three-month supply.

The patient has a history of recurrent left breast cancer originally diagnosed in 2015, treated with breast-conserving surgery, chemotherapy, and radiotherapy, with subsequent recurrence and management including neoadjuvant therapy, left modified radical mastectomy, and completion of Phesgo therapy in October 2024. Ongoing endocrine therapy with goserelin and letrozole has been continued since April 2024, and new laboratory studies have been ordered pending a dental examination report.

Pathology Report

Clinical Data: Left breast mass.
Nature of Specimen: Slide Revision

Gross Examination:
One paraffin block labeled by (3651) and four slides were received.

Microscopic Examination:
* Histological type: Invasive duct carcinoma.
* Grade (differentiation+ nuclear pleomorphism+ mitosis): Grade II(3+2+1)
* IPT:
- ER: Strong nuclear reaction in 70% of tumor cells (Allred score 8/8).
- PR: Strong nuclear reaction in 50% of tumor cells (Allred score 7/8).
- Her2: Moderete complete membrane reaction in >10% of tumor cells (score 2+).
-SISH: Amplified with small clusters.

Diagnosis:
Left breast cancer, Slide revision:
Invasive duct carcinoma, Grade II.
IPT:
- ER: Positive (score 8/8).
- PR: Positive (score 7/8).
- Her2: Equivocal (score 2+).
-SISH: Amplified with small clusters.

Pathology Report

Clinical Data: Left recurrent breast cancer, post NACT, in patient with history of Lt BCS & ALND in 2015.

Nature Specimen: Left completion mastectomy specimen.

Gross Examination:
* Procedure: Left completion mastectomy specimen measured 18x12x4.5 cm, with covering skin ellipse measured 18x8 cm, showed a healed scar measured 12 cm long.
* Tumor extent: A greyish white tumor bed site, located at 12 O'clock.
* Size: 1.5x1x1 cm.
* Skin: Nipple & areola looked unremarkable grossly.
* Distance from margins: 0.7 cm away from the deep margin.
- 10 Blocks:
1:3- 12 O'clock TBS 4:8- Rest of cut section. 9- Nipple & areola. 10- Deep margin.
- Gross was done by: Dr. Duaa Mohamed.

Microscopic Examination:
* Histological type: No residual viable of the previously diagnosed invasive duct carcinoma.
- Actual tumor cellularity: 0%.
* Ductal carcinoma in situ: Not detected.
* Skin: Free with free nipple & areola.
* Resection Margins: Free.
* Histologic response to therapy: Complete pathological response to therapy.

Diagnosis:
History of left BCS & ALND in 2015:
Left recurrent breast cancer post NACT, Left completion mastectomy:
No residual viable of the previously diagnosed invasive duct carcinoma.

^{99m}Tc MDP Bone Scan Report (17-8-2023)

* Whole Body Anterior and Posterior Planar Views Acquired 2Hrs. Post I.V Injection of 20mCi of ^{99m}Tc MDP

Revealed:

- No current definite evidence of active osseous deposits could be seen over the surveyed skeleton.
- Degenerative changes are noted over the cervico-dorso-lumbar vertebrae.
- Arthritic changes are noted over the Lt sterno-clavicular, both shoulder and both knee joints.
- Both kidneys are visualized.

Conclusion:

- No current definite evidence of active metastatic osseous deposits could be seen all over the surveyed skeleton.

Much Obliged
Dina Thabet
Dr. Nada Fadl, MD.

Bone Scan
[[DOCTYPE:BONE_SCAN]]

- No abdominal or pelvic masses or collections.
- IUD is noted.
- Right paraumbilical fat containing hernia.
- **The revised bone window revealed:**

1. D10 vertebral body and left sacral alum sclerotic foci likely bone islands.
2. No CT evidence of vertebral collapse or extra-osseous soft tissue component.

Opinion:

- No definite pulmonary or hepatic metastases.
