Detailed Medical Report

السيد	

تحية طيبة وبعد,,

إيماء للطلب المقدم من		بشأن تقرير طبي للمريض	
بقسم:		رقم طبي:	

نشرف بأن نوضح فيما يلي تقريرا عن حالتها

تاريخ وساعة الدخول :		تاريخ وساعة الخروج :	

وبعد الكشف والفحوصات والمتابعة وجد انها

The patient underwent postoperative therapy with FEMARA and Zoladex 10.8 mg administered for the first time. Zometa was to be considered after a dental evaluation, and a PHESGO regimen was planned for the eighth cycle with placement of a port pending.

Zoladex was scheduled for administration on 13 March 2026, and FEMARA was given on the same day. The patient also received PHESGO for three months, with an echo performed to assess response.

For cycle 10, the patient received PHESGO in combination with Zoladex 10.8 mg. The pharmacy recorded administration of cycles 11 and 12, and an echo performed on 8 March 2026 showed a tumor reduction to 68 %.

The patient's left breast cancer was staged as cT4 d, N1, M0, IDC grade 2, ER 7/8, PR 6/8, HER2 23+. The case was discussed on 17 November 2025, and the patient had left sentinel node surgery with 0/5 nodes positive. New laboratory work was ordered; FEMARA was continued, but PHESGO was not available at that time.

During a pharmacy visit, the patient received cycle 12 of PHESGO (600 mg) together with Letrozole. An echo performed on 8 March 2026 again demonstrated a 68 % response.

For cycle 14, the patient was treated with PHESGO, FEMARA, and supportive therapy; an echo on 10 August 2026 showed a 64 % response. Plans were made for cycles 15 and 16, with possible continuation to cycle 17 pending pharmacy approvals, and FEMARA was to be continued.

The most recent pharmacy visit documented administration of cycle 15 of PHESGO together with FEMARA, and an echo on 10 August 2026 showed a 64 % response. The patient has now completed fifteen cycles of PHESGO.

Pathology Report

Clinical Data: Left breast cancer, Post-NACT.
Nature of Specimen: Left simple mastectomy & Sentinel lymph nodes biopsy.

Gross Examination:
* Left simple mastectomy specimen measured 22x21x4 cm, with covering skin ellipse measured 21x13 cm. Nipple & areola looked unremarkable grossly.
* Serialling showed a tumor bed site 8x5x2 cm, located 2 cm from the least deep margin.
* Sentinel lymph nodes: Fibrofatty tissue piece measured 4x3x1 cm, entangling 5 lymph nodes, the largest measured 1.5x1x0.5 cm.
* 11 Blocks:
1:8- T.B.S., 9- N&A., 10- Deep margin., 11- SLNs.
- Gross was done by; Dr. Heba Hassan.

** Frozen (intra-operative) results:
- Free five sentinel lymph nodes (0/5).

Microscopic Examination:
* Histological type: No residual viable remnants of the previously diagnosed invasive tumor.
- Cellularity (0%).
* Angioinvasion: Absent.
* Ductal carcinoma in situ: Absent.
* Additional findings: Effect of therapy with microcalcifications.
* Nipple & areola: Free.
* Deep margin: Free.
* Sentinel lymph nodes: Five lymph nodes free of viable metastatic deposits (0/5) (One lymph node showing effect of therapy).
* Histologic response to therapy: Pathological complete response to therapy.

IMMUNOHISTOCHEMISTRY REPORT

nical data
ft breast mass

ɜture of specimen
u cut biopsy, collected at 13/4/2025.

echnique:
Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for ER, 'R, Her2, ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:
IPT (Positive control showed appropriate reactivity):
- ER: Moderate nuclear reaction in 90% of tumor cells (Allred score 7 /8).
- PR: Moderate nuclear reaction in 60% of tumor cells (Allred score 6 /8).
- Her2: Strong complete membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 35% nuclear reaction of tumor cells.

Diagnosis:
Left breast mass, Tru cut biopsy:
Invasive duct carcinoma, Grade II with focal DCIS.
IPT:
- ER: Positive (score 7 /8).
- PR: Positive (score 6 /8).
- Her2: Positive (score 3+).
- Ki67: Positive in 35% of tumor cells.

* Scoring system: "ER, PR"

IMMUNOHISTOCHEMISTRY REPORT

SCO-CAP ER/PR Test Guideline Recommendations, 2010 Allred score: proportion of cells staining (0, staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, week, 2, termediate; and 3, strong). Total score from 0 to 8.

Scoring system: "Her2"

eference: ASCO-CAP Her2 Test Guideline Recommendations, 2013.IHC 0: as defined by no staining bserved or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of ne invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely erceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane taining that is incomplete and/or weak/moderate and within < 10%of the invasive tumor cells or omplete and circumferential membrane staining that is intense and within < 10% of the invasive tumor ells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor ells.

Patient Name:	ASMAA SHAWKY ABDEL SALAM EIS	Gender:	Female
MRN:	20225018885	Ordered By:	Hadeel Ahmed Hany Abd Elmohaimen
DOB:	10/01/1984 Age: 41 Y 4 M 9 D	Order ID:	189773

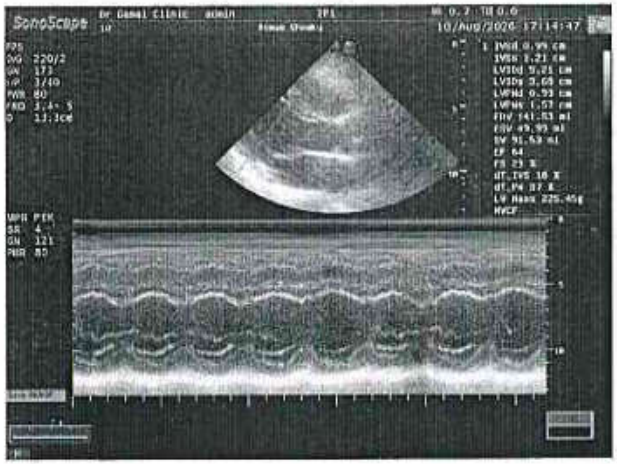

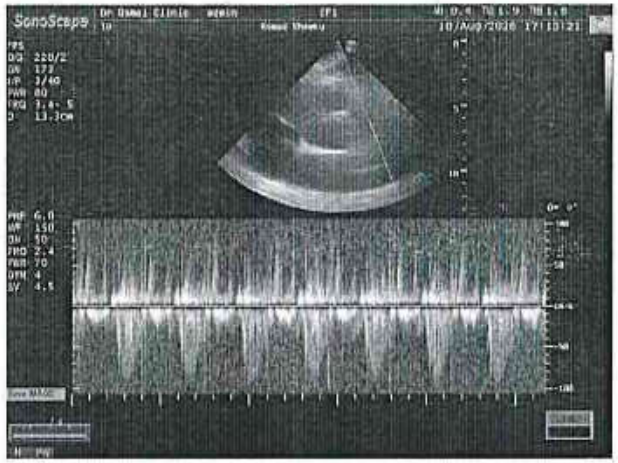

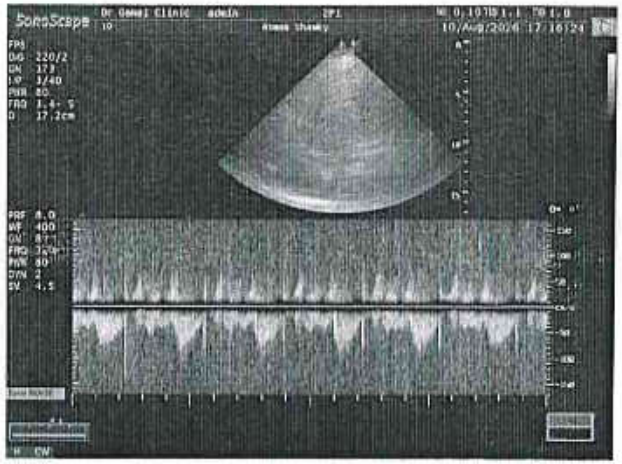

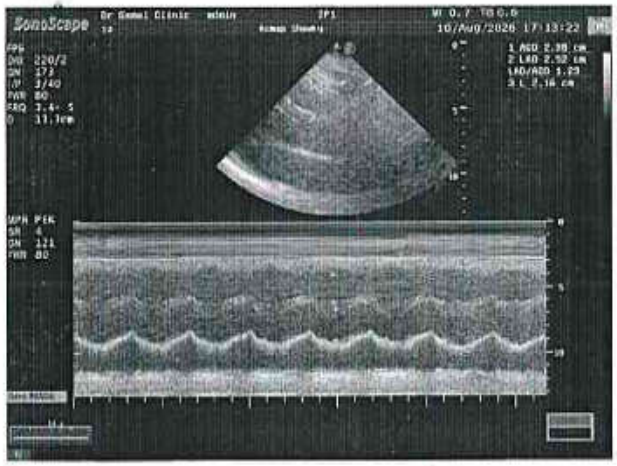

US. Both breast

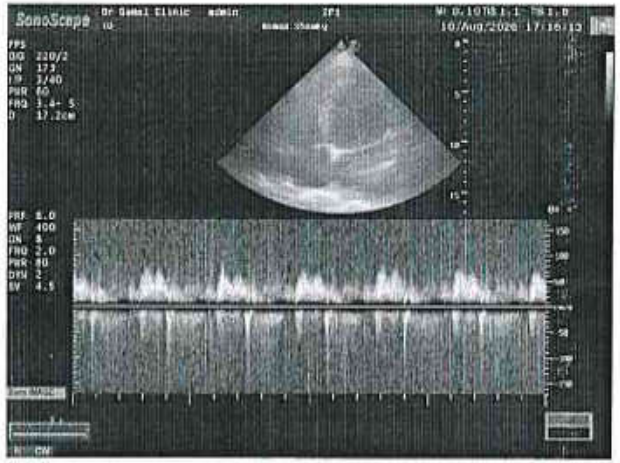

Procedure Date: 08/05/2025 02:47:00 PM

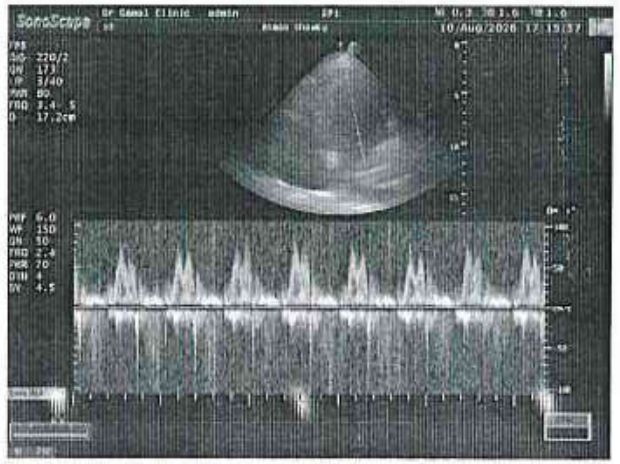

Report:

Report:
FULL FIELD DIGITAL MAMMOGRAPHY AND COMPLEMENTARY ULTRASOUND
INDICATION:
- Left breast pathologically proven outside Baheya IDC grade II with focal DCIS and triple positive.
TECHNIQUE:
- CC and MLO view.
- Complementary ultrasound.
REPORT:
- Extremely dense breasts (ACR D), which can obscure underlying lesions.
Left breast:
- Left LOQ two small groups of suspicious micro calcifications are seen, complementary ultra sound revealed left 3-4 o'clock para areolar focal area of palpable altered parenchyma mounting to mass formation is seen about 0.3 cm from the skin and nearly inseparable from under surface of the nipple. It shows subtle vascularity on applied color Doppler and measures about 5 x 3 cm.
- Left axilla (level I) shows single globular hypo echoic pathological lymph node. It roughly measures about 2.1 x 1.1 cm.
- No pathological supra or infra clavicular lymph nodes.
Right breast:
- No right spiculated mass lesions or grouped microcalcifications.
- Complementary ultrasound revealed no right solid or cystic mass lesions.
- Mottled appearance of prominent fibro glandular parenchyma of the breasts.
- Normal skin thickness and contour.
- Normal nipple areola complexes.
- Right nonspecific axillary lymph nodes with central fatty hila.
- No pathological supra or infra clavicular lymph nodes.
OPINION:
- Left breast pathologically proven malignancy outside Baheya as described (BIRADS 6).
- Left axilla pathological lymph node.
- Fibroadenosis.
