Technique

Medio-lateral oblique and CC views High resolution ultrasound

Detailed Findings

left breast

- Scattered fibro glandular densities (ACR B).
- **LIQ** asymmetric density with distortion measures about 25x22mm
- **Ultrasound** demonstrated LIQ, between 8-9 o'clock, 5 cm from nipple, 5 mm deep to the skin, irregular anti-parallel heterogenous solid mass lesion with moderate internal vascularity on color doppler study and posterior acoustic shadowing measuring 22x17mm. (mammography correlated and corresponding to the felt lump)
- Normal skin and nipple/areolar complex.
- Enlarged one node measures 24x18mm with focal cortical thickening 3.8mm (indeterminate)
