Medical Report

Patient Name :	[illegible]	Age :	41 Y
Sex :	◉ Male ○ Female	Comorbidity :	DM
ID No. :	13250	Telephone :	01555021027
Family History :	Negative	Marital Status :	◉ Married ○ Divorced ○ Single
Menopausal Status :		Reason of MDT :	New Case
		MDT number :	

Medical Report

Diagnosis : MDA. Diff adenocarcinoma body and tail of Pancreas

Notes :
41 ys male /ex smoker , diagnosed in late july 2025 by Cancer Tail body of Pancreas in MSCT AP,, : Endoscopic Biopsy : Mod Diff Adenocarcinoma. Borderline Resectable ,, For MDT to start NACT and Surgical evaluation of resectability

History : ECOG PS 1

Investigations : CT PA : Hypodense mass lesion in the body and tail of pancreas ,encircling splenic artery,, Inseparable surrounding fat stranding from mass (local spread)
CT Chest : Bil small lung nodules for F/U Scan
EUS biopsy from lesion: Mod diff adenocarcinoma
CA 19-9 256

Recommendations : For Radiologists/Surgical assessment of imaging to confirm resectability and metastatic status.
MRI PA +/- PET-CT if in need
If confirmed, borderline resectable to start NACT mFolfirinox / Folfeoxiri and then surgery acc to response
Pain Clinic consultation/ Nutrition consultation

MDT DECISION: For ECHO , Fortacath
-->borderline resectable to start NACT Folfirinox (4 cycles each with day 1, day 15) / and then assess resectability with CT Chest and PA + Pancreatic Protocol and Surgery acc to response
Pain Clinic consultation/ Nutrition consultation

ECHOCARDIOGRAPHY REPORT

DIMENSIONS

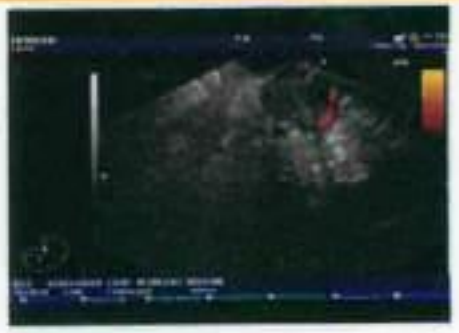

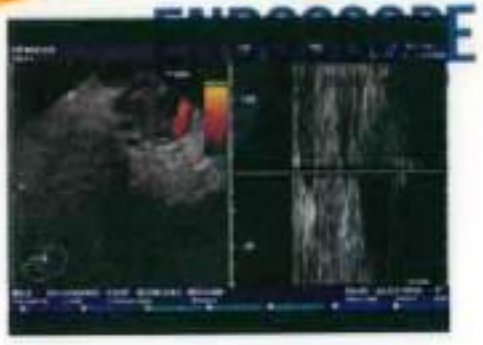

LVEDD	4.9	(<5.6 cm)	**FS**	27% (>31%)
LVESD	3.6		**EF**	53% (>55%)
IVSWT	0.9	(<1.1 cm)	**MITRAL FLOW**	NORMAL
PWT	0.8	(<1.1 cm)	**AORTIC FLOW**	NORMAL
AO ROOT	3.1	(<3.7 cm)	**PULMONARY FLOW**	NORMAL
LA	3.4	(<4.0 cm)	**TRICUSPID FLOW**	NORMAL
RV	1.9	(<2.7 cm)		

CONCLUSIONS:

The basal HR=110 bpm

- Normal left ventricular internal dimensions, and wall thickness with **good LV global systolic function (EF= 53% by m-mode).**
- Antegrade diastolic mitral flow shows fused E and A waves **(sinus tachycardia).**
- No regional wall motion abnormality at rest apart from **beginning of abnormal (paradoxical) septal wall motion.**
- Trivial mitral regurge.
- Trivial aortic regurge.
- Normal other valvular aspect, thickness and function.
- Normal left atrium. Normal aortic root dimensions.
- Trivial tricuspid regurge with no indirect signs of pulmonary hypertension. PASP=26+CVP mmHg, with normal dimensions and contractility of the right sided chambers.
- No detected intra-cardiac shunts by TTE.
- No detected intra-cardiac masses or thrombi.
- Normal pericardium.

Best Regards,
Rania El-Husseiny, MD.

INDICATION FOR EXAMINATION

PROCEDURE PERFORMED

Diagnostic

MEDICATIONS

FINDINGS

Pancreas:

There was solid hypoechoic pancreatic mass about 24mmx23mm at body ,tail junction 22FNA g needl biopsy was done.

Mass was abuting splenic vien away from portal confluence,displaying and streching splenic artery.

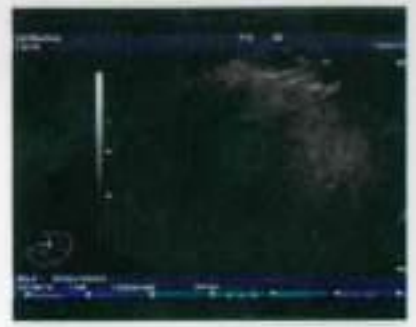

Surrounding panchreatic parenchyma showed hony combing .

Pancreatic duct was not dilated.

CBD was not dilated.

No prelesiona LNS.

No IHBRD

Conclusions

Pancreatic body ,tail mass,biopsed

Recommendations

Endoscopist Dr Ahmed Ramadan

CT Scan

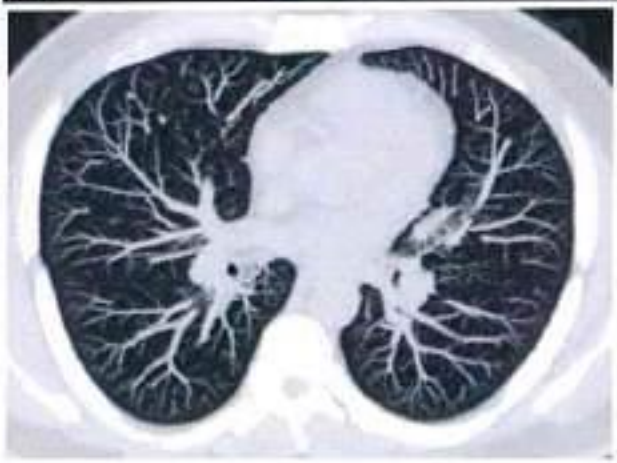

alfa
SCAN

Name: Hossam Ahmed Khalil Khalil *ID: 2168429*
Referred by: Prof. Yasser Aldebeky *Date: 06/08/2026*

Multislice non contrast CT scan of the chest with multiplanar reformatting revealed:

- No pulmonary ground glass opacities, consolidation, cavitation.
- Few bilateral pulmonary nodules (more at the right); the largest seen at the middle lobe fissural based measuring 5 mm.
- Bilateral bronchial wall thickening.
- No pathologically enlarged hilar or mediastinal lymph node enlargement.
- No pleural or pericardial collections seen.
- No gross cardiac abnormality.
- Left thyroid lobe calcifications. for US assessment.
- Small sliding hiatus hernia.

OPINION:

- **Few bilateral pulmonary nodules. For follow-up.**
- **No current CT features of pneumonia.**

PATHOLOGY REPORT

Clinical Data: Pancreatic mass. **EUS:** Solid hypoechoic mass, 24x23mm at pancreatic body-tail junction.

Nature of Specimen: EUS-FNB.

Gross Appearance: Unstained films and hemorrhagic material entangling tan tissue fragments submitted for cellblock preparation.

Microscopic Features:

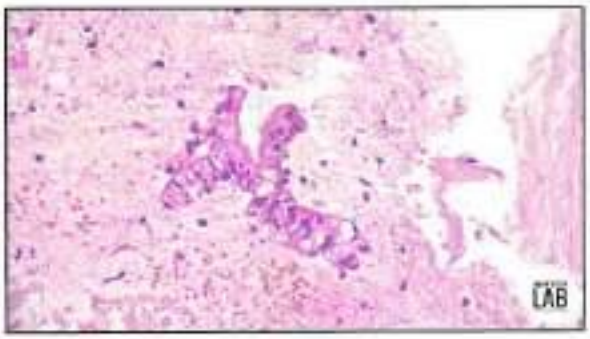

Cytologic examination of the films revealed hypocellular smears showing eosinophilic material entangling RBCs, inflammatory cells and rare groups of epithelial cells showing mildly atypical nuclei.

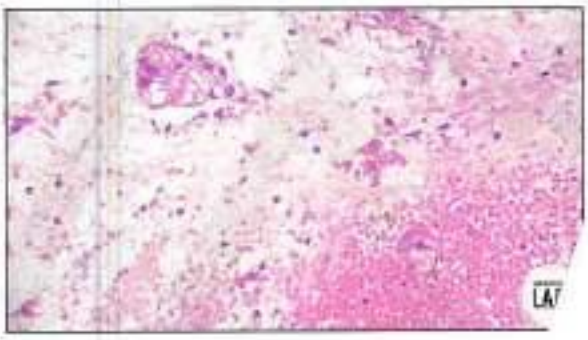

Sections examined from the cellblock prepared from the received aspirate revealed fibrinous material and blood clots entangling fragments of pancreatic tissue with marked fibrosing reaction, together with scattered groups and acini composed of mildly and moderately pleomorphic epithelial cells having large hyperchromatic nuclei, high nucleocytoplasmic ratio and vacuolated pale eosinophilic cytoplasm.

Opinion:

Pancreas, EUS-FNB,

Satisfactory Aspirate: Moderately Differentiated Adenocarcinoma. WHO Diagnostic Category: Malignant.

alfa SCAN

Name: Hossam Ahmed Khalil Khalil *ID: 2168429*
Referred by: Prof. Mohamed Al Kassas *Date: 25/07/2026*

Multislice post contrast CT scan of the abdomen and pelvis with multiplanar reformatted images revealed:

- Swollen pancreatic body by the virtue of an ill-defined **(blue arrows)** hypodense area.
  - Associated smudging of the peri-pancreatic fat planes with pathologically enlarged peri-pancreatic lymph node **(yellow arrow)**, seen measuring about 0.9 cm in axial dimensions.
  - No gross pancreatic duct dilatation.
  - **Vascular relations show;**
    - Attenuation of the related proximal segment of the splenic artery.
    - Focal non-enhancing distal segment of the related aspect of the splenic vein, with patent rest of its segments. Mild stranding along the perivascular fat planes along celiac and splenic artery.
    - Dilated portosystemic collaterals are seen along the peri-gastric and gastro-splenic regions.

AMG A MEMBER OF ALFA MEDICAL GROUP
الفاسكان 16171
CT Scan
{{DOCTYPE:CT_SCAN}}

alfa
SCAN

- Mildly enlarged liver showing homogenous parenchymal attenuation. No sizable enhancing hepatic focal lesions or biliary radicles dilatation.
- Unremarkable CT appearance of the spleen, adrenals, both kidneys, aorta & IVC as well as pelvic organs.
- No sizable ascites.
- Scanned lung bases show right basal atelectatic bands.

OPINION:

- **Swollen pancreatic body by ill-defined hypodensity with related fat stranding, with focal splenic artery attenuation and distal splenic vein attenuation/non-enhancement as above described, for Doppler study correlation.**
  - **Diagnostic possibilities include inflammatory process (sequel of pancreatitis), however underlying neoplastic process cannot be excluded, for tumor markers correlation and further work-up.**
- **Mild hepatomegaly.**
