FULL FIELD DIGITAL MAMMOGRAPHY

INDICATION:

- Screening.

TECHNIQUE:

- CC and MLO view.
- Targeted ultrasound

FINDINGS:

There are scattered areas of fibroglandular density (ACR b).

LEFT BREAST:

- Rather stationary UOQ spiculated dense mass, measuring 6.5x6 cm in diameter 15 mm from skin and 5.8cm from the nipple, targeted ultrasound revealed corresponding 2:00 spiculated mass with internal vascularity on color Doppler.
- LOQ small irregular nodule is seen more appreciated in the current study, being 6.5cm inferior to the aforementioned mass and 7cm from nipple, targeted ultrasound revealed corresponding small irregular hypoechoic nodule surrounded with hyperechoic desmoplastic reaction, located at 3:00, measuring about 0.8x0.6cm in diameter.
- Mild areolar and paraareolar skin thickening are still noted with subtle nipple retraction
- No pathologically enlarged axillary lymph nodes.

RIGHT BREAST:

- No spiculated mass lesions or grouped microcalcifications.
- Targeted Ultrasound of outer quadrants revealed no suspicious lesions.
- Scattered round calcifications.
- Normal skin thickness and contour.
- Normal nipple areola complexes.
- Nonspecific axillary lymph nodes.

OPINION:

- Rather stationary left breast UOQ pathologically proved malignant mass (BIRADS 6) along with LOQ newly appreciated small suspicious nodule.
- Right breast benign findings (BIRADS 2).
