Pathology Report

CLINICAL DATA:

Right breast cancer, post NACT

NATURE OF SPECIMEN:

Right BCS & SLN specimens

GROSS EXAMINATION:

- 1- Right SLN: A multiple fibrofatty tissue pieces measured collectively 7x7cm & entangling nodules up to 1cm.
- 2- Right W.I.E specimen measured 12x18x2 cm , with covering skin ellipse measured 6x1.5 cm.

- 3- Gross extent
- 4- Number: A firm grayish white tumor bed site
- 5- Size: 2x1.3 cm
- 6- Skin involvement: Free grossly
- 7- Distance from margins: 1.2cm from deep margin (least margin)

MICROSCOPIC EXAMINATION:

- Right breast ; BCS & SLN biopsy :
- Pathologic partial response with viable tumor cells in a lesion diagnosed invasive duct carcinoma. Cellularity (60%)
- Histological grade: grade II
- Ductal carcinoma in situ: associated
- Skin involvement: Free
- Lymph node involvement: Positive metastases LNs (5/13) with focal capsular invasion
- Angio invasion: No
- Perineural invasion: No
- Frozen section: Free margins

Pathology Report

DIAGNOSIS:

Right breast ; BCS & SLN Biopsy :

- Pathologic partial response in a lesion diagnosed invasive carcinoma grade II
- Free all resected margin
- Free ALNs (5/13)
- Stage : ypT1, ypN2, ypMx
- RCB:3.288, RCB-III

غرفة رقم (4) - الدور الأول - مبنى رقم (987) - كورنيش النيل - مصر الجديدة - القاهرة - مصر
Room No. (4) - First Floor-Building No. 987- Nile Cornet - Misr El Qadima - Cairo, Egypt

Patient Name: Eatemad Mohamed Abd Al Razek Abd Al Hady	Date : 15/11/2022
Exam : MAMMOGRAPHY BOTH	Age : 45 Year(s)
Medical ID: 1411/2022	Pat ID: 21223

**DIGITAL BILATERAL SOFT TISSUE MAMMOGRAPHY AND
COMPLEMENTARY ULTRASOUND**

Indication:

Patient is 45years old and is seen for Post NACT status assessment of a known right breast malignant mass

Report:

- ACR b: scattered fibro-glandular parenchyma of both breasts
- Bilateral dilated ducts with retained secretions
- Right Breast:
 - A residual ill-defined irregular iso-dense spiculated mass is seen in the UOQ marked by a metallic clip. It measures 30x36x50mm
 - Ultrasound shows this mass an irregular hypoechoic mass. It is seen at 11O'clock about 40mm from the nipple.
 - *Pathologically enlarged level I axillary lymph nodes (>3), the largest measures 10mm in TS diameter with 8mm cortical thickness. No infraclavicular or supraclavicular lymphadenopathy.*
- Left Breast:
 - No suspicious micro calcifications or architectural distortion detected.
 - Complementary ultrasound no cystic or solid mass lesions.
 - Normal skin thickness, and nipple-areola complex.
 - Nonspecific axillary LN.

Opinion:

- Post NACT status of right breast showing a residual mass with residual axillary lymphadenopathy (BIRADS 6)
- Normal sonomammography of left breast (BIRADS 1)

Best regards,
Dr. Amira H. Radwan MD,
Breast Imaging consultant,
NHL-Cairo University

Contrast enhanced Spectral Mammography
CLINICAL SUMMARY: right. Breast malignant mass.

TECHNIQUE:

CC & MLO low energy & recombined (post contrast) images

FINDINGS:

Background Uptake: Mild

LEFT BREAST:

- Scattered fibroglandular pattern (ACR B).
- Pre-contrast Images: no mass lesion.
- Post-contrast image: no mass or non mass enhancement.
- No signs of malignancy
- No pathological axillary L.N.

RIGHT BREAST:

- Scattered fibro glandular pattern (ACR B).
- Pre-contrast Images: ill-defined UOQ mass.
- Post-contrast image: ill-defined irregular heterogeneously enhancing mass located at the UIQ about 10 cm away from the nipple, measure 4 x 4 cm in diameter, cm.
- Normal skin / nipple / areolar complex.
- Ultrasound revealed pathological axillary lymph nodes with effaced hilum.

IMPRESSION:

LEFT BREAST: (BIRADS 1= negative) normal study.

RIGHT BREAST: (BIRADS 6= pathologically proved malignant) unifocal UOQ malignant mass.

Thanks for your Reference,

Dr Hanaa Abo El MAGdi
