Pathology Report

Clinical Data: Right breast cancer, post NACT.
Nature Specimen: Wider margins after right breast conservative surgery (positive DCIS in inferior margin) and Axillary lymph node dissection.

Gross Examination:

- Procedure: Wider margins:
- Fibrofatty tissue piece measured 16x7x3 cm with covering skin ellipse measured 14x1 cm.
- Serialling revealed a cavity surrounded by firm grayish white and yellow.
- Size: 6x3.5x1.5 cm.
- Skin involvement: showed unremarkable grossly changes.
- Distance from margins: 0.5 cm away from (least inferior margin)
- There was a nodule measured 0.5x0.5x0.5 cm adjacent to the cavity and away 0.5 cm from least inferior margin, totally submitted.

Microscopic Examination:

- Revealed residual high grade DCIS(comedo & Non comedo) and showed a cavity with surrounding fat necrosis, histocytic reaction and many giant cells.
- Positive metastatic intramammary node with extracapsular extension.
- Resection margins : Free.

Frozen section result:

Free margins.

Diagnosis:

Wider excision, post NACT:
Residual high grade DCIS(comedo & Non comedo), positive metastatic intra-mammary node with extra-capsular extension.
Free presented margins.

99mTc MDP Bone Scan Report (10/03/2025)

* Whole Body Anterior and Posterior Planar Views Acquired 2Hrs. Post I.V Injection of 20mCi of 99mTc MDP Revealed:

- " No definite evidence of active osseous deposits could be seen over the surveyed skeleton.
- " Enhanced extra-skeletal soft tissue uptake at right breast suggestive of Lymphedema.
- " Degenerative changes are noted over the dorso-lumbar vertebrae.
- " Arthritic changes are noted over both shoulder and both knee joints.
- " Both kidneys are visualized.

Conclusion:

" No definite evidence of active metastatic osseous deposits could be seen all over the surveyed skeleton.

Much Obligated

Pathology Report

* Positive metastatic deposits in two sentinel lymph nodes, SLN (2/5).

Microscopic Examination:

- * Histological type: Residual viable invasive duct carcinoma (Cellularity 44%).
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): Grade II (3+2+2).
- * Ductal carcinoma in situ: Present (5%).
- * Angio-invasion: Present.
- * Perineural invasion: Present.
- * Skin: Free.
- * Resection margins: Positive extra-inferior margin for DCIS & free other surgical margins.
- * Other findings: Fibrosis, hyalinosis, microcalcification & mucinous areas, representing effect of therapy.
- * Histologic response to therapy: Pathological partial response to therapy.
- * Lymph nodes: Positive metastatic deposits in two out of 14 lymph nodes, L.N (2/14), with evidence of extra-nodal extension.

Diagnosis:

Right breast cancer, Right breast conservative surgery, Extra-inferior margin & Right axillary lymph nodes, post RACT:

- Residual viable invasive duct carcinoma, Grade II, with 5 % DCIS.
- Resection Margins: Positive extra-inferior margin for DCIS and free other surgical margins.
- Skin: Free.
- Axillary lymph nodes: Positive metastatic deposits in two out of fourteen lymph nodes, L.N (2/14), with evidence of extra-nodal extension.
- Histologic response to therapy: Pathological partial response to therapy.
- Stage: ypT2, ypN1a.
- RCB: 3.526, RCB class III.

Exam : ultrasound ABDOMEN& PELVIS	Age : 33 Year(s)
Medical ID: 3435/2023	Pat. ID: 42584

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- Average in size (15cm at Rt MCL) homogenous parenchymal echopattern with smooth surface.
- heterogenous hyperechoic focal lesion at segment VIII measuring 35x21mm
- No intra hepatic biliary radicle dilatation.
- Portal vein is patent and not dilated.

Gall Bladder: -

- Average distention and capacity with no stones or mud
- The wall is not thickened.
- CBD is not dilated.

Spleen: -

- Average size, homogenous.

Kidneys: -

- Both are average in size, shape and echogenicity
- No stones or dilated pelvicalyceal system
- No gross lesion

Para-aortic and pancreatic area: show no gross abnormalities.

No ascites

Urinary Bladder: -

- Average capacity with no stones or diverticular out pouching

Uterus and adnexal: no abnormalities could be detected

Opinion:

Hepatic FL for triphasic CT

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast mass .
Nature of Specimen: Slide revision.
Technique:
Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).
Results:

results:
 IPT (Positive control showed appropriate reactivity):
 ER: Strong nuclear reaction in 80% of tumor cells
 (Ired score 8/8).
 PR: Strong nuclear reaction in 50% of tumor cells
 (Ired score 7/8).
 Her2: No membrane reaction in the tumor cells (score 0).
 Ki67: 40% nuclear reaction of tumor cells.

Conclusion:
Right breast mass, Tru-cut biopsy:
Invasive duct carcinoma, Grade II.
I:
R: Positive (score 8/8).
R: Positive (score 7/8).
Her2: Negative (score 0).
Ki67: Positive in 40% of tumor cells.

coring system: "ER, PR"
