IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast mass.

Nature of Specimen: Slide revision of TCNB

Gross Examination:

-Seven slides labelled by (12826/25) were received including IPT slides (ER,PR, HER2 ,KI67).

Microscopic Examination:

- * Histological type: Invasive duct carcinoma.
- * Grade (differentiation +nuclear pleomorphism+ mitosis): (2+2+2) Grade 2
- * DCIS: Intermediate grade , solid and cribriform with comedo subtypes
- * Lobular intra epithelial neoplasia : Absent
- * Angioinvasion: Absent .
- * Microcalcification : Positive.
- * Perineural invasion: Absent
- * IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear staining in 70% of tumor cells (score 8/8).
- PR: Strong nuclear staining in 90% of tumor cells (score 8/8).
- Her2: Moderate incomplete membrane staining in more than 10% of tumor cells (score 2+)
- SISH :
- Average HER2 copy No .2.15
- HER2/CEP17 ratio :1.04
- KI67 : 5 %

Diagnosis:

Right breast mass, Slide revision :

Invasive duct carcinoma grade 2 (tubular differentiation 3, nuclear pleomorphism 2, mitosis 2) , according to Nottingham grading system of breast cancer ,

IMMUNOHISTOCHEMISTRY REPORT

Intermediate grade duct carcinoma insitu ,solid and cribriform with comedo subtypes with positive
Location .

ER: Positive (score 8/8).
PR: Positive (score 8/8).
Her2: Equivocal (score 2+).
SISH : Not amplified.
KI67: 5 %

luminal A.

Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, <1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak, 2, intermediate; and 3, strong). Total score from 0 to 8.

Scoring system: "Her2"
Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within > 10% of the invasive tumor cells.
IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within >10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is complete, intense > 10% of tumor cells.

Pathology Report

Clinical Data: Right breast cancer, Up-Front.

Nature Specimen: Right skin sparing mastectomy, Sentinel lymph nodes biopsy & Completion axillary clearance.

Gross Examination:

- * Right skin sparing mastectomy specimen measured 18x17x5 cm, with overlying unremarkable nipple & areola complex measured 4x1 cm.
- * Serialling showed a mass 1.9x1.5x1 cm, located 1 cm from the deep margin & 0.7 cm from the superficial margin.
- * Surrounding breast showed rubbery grey white cut section with beaded foci.
- * SLNs: Multiple fibrofatty tissue pieces collectively measured 4x4 cm, entangling four lymph nodes, the largest measured 1.5x1x0.5 cm.
- * Completion axillary lymph nodes: Axillary fat 6x5x2 cm, entangling 9 lymph nodes, the largest measured 2x1x0.5 cm.
- * Total-nodal count is; Thirteen lymph nodes.

16 Blocks:

1- Superior margin., 2- Inferior margin., 3- Lateral margin., 4- Medial margin., 5- Deep margin., 6- Superficial margin., 7:8- Mass., 9:12- Surrounding breast., 13- SLNs., 14- N&A., 15:16- ALNs.

- Gross was done by; Dr. Heba El-Shafeey.

** Frozen (intra-operative) results:

- SLNs: Positive metastatic deposits in two out of four sentinel lymph nodes (2/4).

Microscopic Examination:

- * Histological Type: Invasive duct carcinoma.
- * Grade 2 (differentiation 2, nuclear pleomorphism 2, mitosis 2).

Pathology Report

- * Ductal carcinoma in situ: Extensive intermediate grade DCIS.
- * Additional findings: Surrounding breast showing foci of ductal carcinoma in situ.
- * Angioinvasion: Present.
- * Perineural invasion: Absent.
- * Surgical margins: Free.
- * Sentinel lymph nodes: Positive metastatic deposits in two out of four sentinel lymph nodes (2/4).
- * Completion axillary lymph nodes: Positive metastatic deposits in two out of nine lymph nodes (2/9), with extra-nodal extension.
- * Total nodal status: Positive metastatic deposits in four out of thirteen lymph nodes (4/13) with extra-nodal extension.

Diagnosis:

Right breast cancer (Up-front), Right skin sparing mastectomy, Sentinel lymph nodes biopsy & Completion axillary clearance:

- Invasive duct carcinoma, Grade 2, with extensive intermediate grade ductal carcinoma in situ.
- Surgical margins: Free.
- Total lymph nodal status: Positive metastatic deposits in four out of thirteen lymph nodes (4/13) with extra-nodal extension.
- Stage: pT1c, pN2a.

Women's Health Outreach Program

Bilateral full field Digital Mammography

Clinical summary: 40 yrs old Right breast lump

Technique

Medio-lateral oblique and CC views & High resolution ultrasound

Detailed Findings

Right breast

- Scattered fibroglandular densities (ACR B)
Right UOQ irregular shaped faint dense spiculated lesion showing internal suspicious microcalcifications seen 6.5 cm from nipple.
- Scattered suspicious clusters of microcalcifications seen involving most of the breast quadrants .The estimated area measures 7.5 x6 cm seen about 3 cm from nipple
- Ultrasound
- Right UOQ irregular shaped spiculated hypoechoic lesion seen at 10 o'clock zone c measuring 1.8x 1.4 cm .
- Retroareolar dilated ducts .
- Normal skin and nipple/areolar complex.
- Non-specific axillary LNs.

Left breast

- Scattered fibroglandular densities (ACR B)
- No masses, asymmetric densities, distortion or suspicious clusters of microcalcifications.
- Ultrasound demonstrated no solid or cystic lesions.
- Normal skin and nipple/areolar complex.
- Non-specific axillary LNs.

Impression:

Right breast (BIRADS 6): Right UOQ pathologically proved malignant lesion associated with wide spread suspicious malignant microcalcifications

Left breast (BI-RADS 1) : Normal findings

Recommendations:

Right breast: : MRI may be advisable to delineate the extent of pathology.

Best regards,
Dr. Heba Ahmad ,MD

Patient Name: Ebtesam Shaaban Abd Al Moneim Ali	Date : 20/10/2025
Exam : CT CAP+C (CT Chest Abd. Pelvis)	Age : 40 Year(s)
Medical ID: 2926/2025	Pat. ID: 132456

MULTISCLICE POST CONTRAST C.T. EXAMINATION OF THE CHEST, ABDOMEN AND PELVIS

REVEALED:

I- CHEST:

- No pulmonary nodules, masses or cavitary lesions.
- No consolidation or collapse.
- No hilar or mediastinal masses or lymph node enlargement.
- No pleural or pericardial collection.
- Normal plain CT appearance of the heart and great vessels.

II- ABDOMEN AND PELVIS:

- Average sized liver showing homogenous parenchymal attenuation. No hepatic focal lesion or dilated biliary radicles.
- Both kidneys are normal size, average sized and showing smooth regular cortical outline and preserved parenchymal thickness and function. No stones or back pressure changes.
- Normal C.T appearance of the spleen, pancreas, suprarenal glands, aorta and IVC.
- The urinary bladder shows no evidence of gross masses or diverticulae or stones.
- Normal appearance of the pelvic organs with no pelvic masses or collections.
- No abdominal or pelvic lymphadenopathy.
- No ascites.

Opinion:

- ❖ A known case of right breast cancer showed no hepatic or pulmonary metastatic lesions.

Tc^{99m} MDPSKELETAL SCINTIGRAPHY

History

- A 40-year-old lady, with history of right breast cancer and referred for metastatic workup.

Technique

- Anterior and posterior whole body scans were acquired 2 hours post injection of the tracer.

Findings

- No abnormal active or cold focal bony lesions that could account for metastatic bone disease.
- Degenerative changes are noted at the spine and big joints.

Impression:

- The skeleton is free from metastases.

Best regards,
Dr. Alaa Nagi, MD

Ref.Prof.Doc:

MAMMOGRAPHY BOTH BREAST (CRANIO-CAUDAL AND MEDIO-LATERAL OBLIQUE VIEWS) FOLLOWED BY ULTRASONOGRAPHY:

- Both breasts are of fibro-fatty parenchymal pattern ACRb.
- Homogenous breast parenchyma showing normal fibro-fatty components.
- Prominent thickened upper outer quadrant fibrous parenchyma reflecting element of bilateral fibro-adenosis
- The right breast showing well defined hypoechoic focal lesion seen ar upper outer quadrant region at 9 o'clock measuring about 1.3 x 1 cm.
- No micro or macrocalcifications.
- Normal skin and subcutaneous tissue.
- No nipple retraction.
- No retroareolar duct ectasia noted.
- No suspicious axillary lymph node is noted.

OPINION:

- *Right breast mass lesion 1.3x1 cmBI-RADS 4A (FNAC is recommended).*
