### IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Metastatic Lt breast cancer

Nature of the specimen: Slides revision

Gross Examination:

1 Block (2355/21)

• Immunohistochemical technique: Sections prepared from paraffin block for immune- staining using Bench Mark ULTRA system for ER, PR,HER2, ER clone (SP1), PR clone (1E2), HER-2 CLONE (4B5), & Ki67 (30-9)

Microscopic examination:

- Histological type: Invasive Ductal Carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): GII (3+2+1)
- Biomarkers

Examination of ER stained slide show intense nuclear staining in 70% of the tumor cells.

Examination of PR stained slide show moderate nuclear staining in 90% of the tumor cells.

Examination of HER2 stained slide show no staining in tumor cells

Examination of Ki67 stained slide show nuclear staining in 30% of tumor cells.

Appropriate tissue control were reviewed

Diagnosis:

Lt breast cancer, Slides revision:

- Invasive Ductal Carcinoma GII
- ER: Positive (score 8/8).
- PR: Positive (score 7/8).
- HER-2: Negative (score 0).
- Ki67: Positive in 30% of tumor cells.

| تاريخ وساعة الدخول :                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  | تاريخ وساعة الخروج :                                                                |  |
| وبعد الكشف والفحوصات والمتابعة وجد انه                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |                                                                                     |  |
| <p>The patient was discussed at a multidisciplinary team meeting on 23 February 2026, where a decision was made to initiate aromatase inhibitor therapy with aromasine and to start the targeted agent affinitor.</p> <p>On 19 July 2026, the patient was noted to have gastritis and pneumonia; the attending recommended holding affinitor for one week while continuing aromasine, and to pause the aromasine therapy. The current status is that affinitor is held for one week and aromasine is paused.</p> |  |                                                                                     |  |

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN,  
AND PELVIS: -**

**I Chest: -**

*Compared to the study dated 07/09/2025, the current study shows:*

**Progressive course** regarding the previously seen left breast LOQ spiculated lesion still measures 3.2 x 1.7 cm compared to 2.8 x 1.3 cm 2 x 3.1 cm

**Progressive course** regarding the previously seen left axillary level I, II and III enlarged lymph nodes measures 3.6 x 2.5 cm compared to 2.5 x 2.1 cm .

**Still noted** sub-centimeteric mediastinal lymph nodes.

Mosaic attenuation of both lung fields.

**Stationary** bilateral scattered pulmonary nodules largest seen in the apical segment of the right lower lobe medial segment still measures 1.1 x 0.9 cm.

Aberrant right subclavian artery.

No evidence of pleural effusion, pleural thickening or masses seen.

Normal cardiac size and shape. No pericardial effusion detected.

Normal CT appearance of the thoracic aorta and the great vessels.

**II Abdomen & pelvis:**

- Enlarged fatty liver with mild regression of size of left hepatic lobe segment II/IVa focal lesion measures 2 x 1.5 cm compared to 2.3 x 2 cm
- regression other similar focal lesion at segment VI adjacent to the IVC not barely appreciated at current study .
- Patent homogenously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes. Bilateral renal cortical cysts.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Fat containing umbilical hernia.
- Bulky fibroid uterus.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.
- Reviewed skeleton showed stable course regarding:

Medical No. : GRI-16629

Ref.Physician Prof :

Ins.Company :

- Still no lytic or sclerotic osseous deposits.
- Bilateral sacro-ilitis.
- lumbar spondylosis.
- left ischial tuberosity sclerotic focus.
- Right femoral neck punctate sclerotic foci likely enchondroma

**Opinion:**

**Follow up study**

- Mild regression of size of hepatic focal lesions .
- progression of size of breast mass .
- Progressive course regarding the previously seen left axillary L. Ns
- Rather stationary rest of study

99mTc MDP Bone Scan Report (17/2/2025)

\* Whole Body Anterior and Posterior Planar Views Acquired 2Hrs. Post I.V Injection of 20mCi of 99mTc MDP  
Revealed:

" No definite evidence of active osseous deposits could be seen over the surveyed skeleton.

" Degenerative changes are noted over the dorso-lumbar vertebrae.

" Arthritic changes are noted over both shoulder and both knee joints.

" Both kidneys are visualized.

Conclusion:

" No definite evidence of active metastatic osseous deposits could be seen all over the surveyed skeleton.

Much Obligated

Mahmoud Akram

Omnia Talaat, MD
