Pathology Report

Clinical Data: Left breast cancer, Up-Front

Nature Specimen: Left breast conservative surgery and sentinel lymph node biopsy.

Gross Examination:

- * Left sentinel lymph node: A fibro fatty tissue piece measured 3.5x3 cm entangling 4 nodules up to 1x1 cm.
- * Left breast conservative surgery specimen measured 6.5x6x5 cm, with covering skin ellipse measured 4x1 cm
- * Tumor extent: An ill defined firm grayish white mass.
 - Size: 1.5x1.5x0.7 cm.
- * Skin involvement: Free grossly.
- * Distance from margins: 1cm from the deep, 1.2 from the skin, 1.5 cm from both the superior, the inferior, 2cm from the medial and 2.5 cm from the lateral.

Microscopic Examination:

- * Left breast conservative surgery and sentinel lymph node biopsy:
- * Histological Type: Invasive duct carcinoma.
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- * Ductal carcinoma in situ: Focal.
- * Skin involvement: Free.
- * Lymph node involvement: Free SLNs (0/4) and one of them showed extensive sinus histiocytosis.
- * Angioinvasion: No.
- * Perineural invasion: No.
- * Resection Margins: Free.
- * Microcalcifications: No.
- * Additional pathologic findings: One lymph node was suspicious in the frozen section but confirmed to be negative in paraffin section.

Pathology Report

Diagnosis:

Left breast conservative surgery and sentinel lymph node biopsy:

- Invasive duct carcinoma, grade II with focal ductal carcinoma in situ.
- Free resection margins.
- Free skin.
- Negative sentinel lymph nodes (0/4), and one of them showed extensive sinus histiocytosis.
- Stage: pT1c, pN0.

Patient Name: Aiat Mohamed Embabi Ismail	Date : 28/11/2023
Exam : C.T. ABDOMEN & PELVIS WITH CONTRAST	Age : 40 Year(s)
Medical ID: 4328/2023	Pat. ID: 43352

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS: -

Reported case of left breast cancer show:

Findings:

I Chest:-

- Left UIQ irregular mass lesion, measure about 24x14mm.
- Clear both lung fields. No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

II Abdomen & pelvis:

- The liver is of average size with homogenous CT texture. No focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.

NUCLEAR MEDICINE BONE SCAN REPORT

Clinical Indication: 43-year-old female with left breast carcinoma, status post lumpectomy (June 2022), and current hormonal therapy. Presents with bone aches. Referred for routine follow-up skeletal evaluation compared to prior study dated July 21, 2025.

Procedure: Whole-body planar bone scintigraphy, anterior and posterior views, following intravenous administration of 99mTc-MDP.

Findings:

- A newly seen small focal area of increased tracer uptake is noted at the lateral aspect of the mid left ribs (level of the 6th/7th ribs).
- The remainder of the rib cage and sternum shows uniform symmetric uptake. Homogeneous tracer distribution is noted throughout the skull, thoracolumbar spine, and pelvic girdle without additional suspicious focal hyperfixation.
- Mild symmetric tracer retention is noted around major joints, consistent with age-related degenerative osteoarthropathy.
- Renal excretion is prompt and symmetric. No abnormal soft tissue uptake.

Impression:

Compared to prior study dated July 21, 2025, which was scintigraphically free of metastases.

- A newly seen small focal uptake at the lateral aspect of the mid left ribs, likely traumatic; dedicated radiological correlation is recommended to definitively exclude metastasis.
- No evidence of widespread or diffuse active osteoblastic skeletal metastases elsewhere.
- Follow up is recommended.

Dr. Alaa Nagi**MD Nuclear Medicine**

Patient's Name: Ayat Mohammed Emabie
Date: 2026-05-18
Referred by: Prof.Dr. no doctor
Hospital: Goustave Roussey International Egypt

Bilateral Digital soft tissue mammography with high resolution breast

sonography revealed:

Clinical summary: Status post left CBS & ALAND, followed by radio therapy, routine follow up study.

Findings:

Left breast.

- Scattered fibroglandular densities. (ACR b)
- Thickened skin and coarsen trabeculae.
- no speculations, masses, asymmetry, or suspicious microcalcifications.
- Ultrasound demonstrated UIO area of parenchymal disruption underneath the operative scar with no solid, cystic lesions or fluid collections.
- Thickened skin and coarsen trabeculae.
- Clear left axilla. No pathological infra or supra-clavicular lymph nodes

Right breast.

- Scattered fibroglandular densities. (ACR b)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- Ultrasound demonstrated no solid or cystic lesions.
- Normal skin, nipple/areola.
- Non-specific axillary LNs.

Conclusion: -

- Left breast (BIRADS 2): Post-Therapeutic sequelae.
- Right breast (BIRADS 1): Normal study

Recommendation: -

- For annual follow up.

Best Regards,
DR. Marwa M. Hassan

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Left breast mass.

Nature of Specimen: Tru-cut biopsy.

Technique:

Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) stained by rabbit monoclonal antibodies using Ultraview HRP DAB as chromogen and hematoxylin as counter-stain. The sections were treated against: ER clone (1E2), PR clone (SP1), Her2 clone (4B5) and Ki67 clone (30-9).

Results:

PT (Positive control showed appropriate reactivity):

ER: Strong nuclear reaction in 90% of tumor cells (Allred score 8/8).

PR: Strong nuclear reaction in 90% tumor cells (Allred score 8/8).

Her2: Faint in complete membrane reaction in >10% tumor cells (score +1).

Ki67: 5% nuclear reaction of tumor cells.

Conclusion:

Left breast cancer, Tru-cut biopsy:

Invasive duct carcinoma, Grade II, with focal DCIS.

ER: Positive (score 8/8).

PR: Positive (score 8/8).

Her2: (score +1).

Ki67: Positive in 5% of tumor cells.

Comment: Although Her2 is Negative, Such cases (Score 1+) are predictive of response to Her2-Ab conjugates (ADCs) according to latest 2023 ASCO-CAP guidelines.
