Detailed Medical Report			
		السيد	
تحتية طبية وبعد,,			
		إيماء للطلب المقدم من	
بشأن تقرير طبي للمريض			
رقم طبي:		بقسم:	
ننشرف بأن نوضح فيما يلي تقريراً عن حالته			
تاريخ وساعة الخروج :		تاريخ وساعة الدخول :	
وبعد الكشف والفحوصات والمتابعة وجد انه			
The patient is a 52-year-old female with a history of type 2 diabetes mellitus who underwent an upfront left mastectomy in October 2023. The surgical specimen demonstrated invasive ductal carcinoma, grade II, with high-grade ductal features, clear surgical margins, and a tumor size of 4 cm. Immunohistochemistry revealed ER 4/8, PR 0/8, and HER-2 3+. Post-mastectomy adjuvant therapy consisted of six cycles of docetaxel-cyclophosphamide (TC) followed by nine cycles of single-agent trastuzumab (Herceptin). The patient subsequently continued adjuvant tamoxifen therapy beginning March 2024 for a duration of three months. The patient has completed 6 cycles of TC and 9 cycles of Herceptin.

Pathology Report

Clinical Data: Left breast cancer.
Nature of Specimen: Slide Revision

Gross Examination:

Thirteen paraffin blocks labeled by (7728/23), one paraffin block labeled by (7035/23) and three slides were received.

Microscopic Examination:

Histological type: Invasive duct carcinoma

Grade (differentiation+ nuclear pleomorphism+ mitosis): Grade II (3+2+1).

DCIS: Wide, High grade.

Skin involvement: Ulcerated skin infiltrated with tumor cells.

Lymph node involvement: Showed micrometastasis in one nodule.

IPT (One lymph node):

ER: Weak nuclear reaction in 5% of tumor cells (Allred score 3/8).

PR: Weak nuclear reaction in 5% of tumor cells (Allred score 3/8).

Her2: Strong membrane reaction in >10% of tumor cells (score 3+).

Diagnosis:

Left breast cancer, Slide revision:

Invasive duct carcinoma, Grade II, with wide, high grade DCIS

Skin infiltrated.

One nodule shows micrometastasis

IPT:

ER: Positive (score 3/8).

PR: Positive (score 3/8).

Her2: Positive (score 3+).

غرفة رقم (4) - الدور الأول - مبنى رقم (987) - كورنيش النيل - مصر القديمة - القاهرة - مصر
Room No. (4) - First Floor-Building No. 987- Nile Corniche - Misr El Qadema - Cairo, Egypt

Date : 24/09/2024	Patient Name: Samia Sobhy Gayed Ebeid Abdou
Age : 50 Year(s)	Exam : ultrasound TRANS VAGINAL
Pat. ID: 79425	Medical ID: 4394/2023

Trans-vaginal ultrasound scanning revealed: -

○ **Uterus: -**

- AVF, average sized uterus measuring about: 6 x 4 x 3.7 cm in its longitudinal, transverse & AP diameters respectively.
- Endometrial thickness measures about: 6 mm.
- No gross myometrial focal lesions.

○ **Ovaries: -**

- Both ovaries are of average size, normal follicular pattern with **no** dominant follicle could be detected.
- **Right** ovary measures about: 2.6 x 2.1 cm.
- **Left** ovary measures about: 2.6 x 2.1 cm.

- No gross adnexal soft tissue masses or cysts.
- No free fluid in the Douglas pouch.

Conclusion:

Normal study

Immunohistochemical Report

pathology number

23-7728

Clinical Data

Lt. breast DCIS with microinvasion.

Metastatic LN.

Gross Picture :

Referred block submitted for ER/PR Immunostaining.

System Used :

Ventana BenchMark ULTRA autostainer.

Antibody:

Ventana anti-PR[1E2] Rabbit monoclonal antibody, Ventana anti-ER[SP1] Rabbit monoclonal antibody.

Scoring system :

According to the ASCO/CAP guideline update, 2019 : Samples with 1% to 100% of tumor nuclei positive for ER or progesterone receptor (PgR) are interpreted as positive. If ER (not PgR), 1% to 10% of tumor cell nuclei are immunoreactive, the sample are reported as ER Low Positive. A sample is considered negative for ER or PgR if < 1% or 0% of tumor cell nuclei are immunoreactive.

Allred score: proportion of cells staining (0, no staining; 1, <1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak. 2, intermediate; and 3, strong). Total score from 0 to 8.

Comment:

- There are much more limited data on the 2% to 3% of cancers that are low ER expressers (most often defined as 1%-10% ER-positive cells by IHC) and their potential benefit from endocrine therapy.

ER positive in 1-20% of tumor cells is considered as Low positive.

(Laterality) breast Cancer:

left

Diagnosis :

ER: Positive, weak nuclear reaction in 20% of tumor cells [4/8].

PR: Negative [0/8].

Clinical Information

Left breast mass diagnosed as high grade DCIS on a biopsy NO. 23-7035 .

Gross Picture

Two specimens were received formalin fixed:

1- Left modified radical mastectomy specimen (19x15cm) with a skin ellipse (17x18cm) that included an attached nipple and an attached axillary tail (7x5x2.5cm) entangling multiple lymph nodes, largest one is 1x1cm. Serial sections revealed a lower inner quadrant **nodular area (6.5x6 cm)**, located 0.5 cm from the skin and 0.2 cm from the deep margin.

2- **Extra-deep margin:** fibrofatty tissue, totally submitted.

Microscopic Picture

1- A case of ductal carcinoma insitu, intermediate to high grade of cribriform and solid pattern with comedo necrosis. There is focal stromal microinvasion. Adjacent breast shows fibrocystic disease with apocrine metaplasia and calcifications. Nipple shows **Paget's disease**. **Deep margin is free of tumor cells**. Skin margins are free of tumor. One axillary lymph node is **positive for micrometastasis (2/24)** with no perinodal infiltration.

2- **Extra deep margin:** free of tumor. ❌

Diagnostic Summary
