Detailed Medical Report		
		السيد
تخية طبية وبعد,,		
	بشأن تقرير طبي للمريض	إيماء للطلب المقدم من
	رقم طبي:	بقسم:
ننشرف بأن نوضح فيما يلي تقريراً عن حالته		
	تاريخ وساعة الخروج :	تاريخ وساعة الدخول :
وبعد الكشف والفحوصات والمتابعة وجد انه The patient is a 41-year-old individual with a history of estrogen receptor-negative (ER0/8) and progesterone receptor-positive (PR5/8) breast cancer. Neoadjuvant chemotherapy (NACTH) was administered followed by right breast-conserving surgery (RT BCS) on 15 March 2023, with pathology reported as clinical pathologic stage T0N0. A port was placed and the patient was started on tamoxifen (TAM) with supportive care, and a three-month course of tamoxifen was planned pending follow-up trans-vaginal ultrasound (TV US). A trans-vaginal ultrasound performed in May 2026 was unremarkable. The study was ordered for monitoring while the patient continues tamoxifen therapy with supportive measures; the patient reports an inflamed, tender right breast. No new cycles or weeks of therapy are documented; the current plan is to continue tamoxifen and supportive care while monitoring.

Patient Name: Nour Ashour Gaber Eid	Date : 16/02/2023
Exam : ultrasound BREAST (BOTH SIDE)	Age : 38 Year(s)
Medical ID: 2972/2022	Pat. ID: 14843

Combined bilateral breast mammography and complementary ultrasound

Indication:

right breast pathologically proven malignant mass on NACT for assessment.

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR B)
- right breast shows UIQ 2 clips seen, with no related residual masses.
- Complementary ultrasound revealed no residual of the previously reported masses (were seen at 2 o'clock, measured 1.6x2.7cm and 2.5x3cm, in prior study dated 5/7/2022)
- No left breast solid or cystic masses
- Normal skin thickness, and nipple-areola complex of the right breast.
- Nonspecific left axillary LN
- The previously reported right axillary pathological LNs, are no more appreciated in today's study.
- Free right infra and supra-clavicular regions.

Opinion:

- Complete radiological response of the right breast UIQ malignant mass and axillary LNs (BIRADS 6)
- Normal left breast study (BIRADS 1)

Yours truly

Exam : C.T.BBRAIN WITH CONTRAST	Age : 40 Year(s)
Medical ID: 2972/2022	Pat. ID: 14843

MULTI-SLICE CT SCAN OF THE BRAIN AFTER IV-CONTRAST
ADMINISTRATION: -

Known case of breast cancer

Findings:

- No focal cerebral areas of abnormal enhancement pattern.
- Preserved normal gray-white matter interface.
- No extra-axial or intra-cerebral areas of fresh blood densities.
- Normal extra-axial CSF spaces & basal skull cisterns.
- Normal size and configuration of the ventricular system.
- No midline shift.
- Unremarkable posterior fossa structures.

OPINION:

No current enhanced CT evidence of mass lesions

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data:
Right breast mass lesion

Nature of the specimen:
Tru cut biopsy collected 5-7-2022 (1:40 PM)

Gross Examination:

Four greyish white and fatty tissue cores up to 1.2 cm . Totally submitted.
Immunohistochemical technique: Sections prepared from paraffin block for immune- staining using
Bench Mark ULTRA system for ER, PR, HER2, ER clone (SP1), PR clone (1E2), HER-2 CLONE (4B5),
3Ki67 (30-9).

Microscopic examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G III(3+3+2)
- Ductal carcinoma in situ: No.
- IP.T:

Examination of ER stained slide show no nuclear staining in the tumor cells.
Examination of PR stained slide show moderate nuclear staining in 30% of the tumor cells.
Examination of HER2 stained slide show no membranous staining in the tumor cells.
Examination of Ki67 stained slide show nuclear staining in 80% of tumor cells.

Diagnosis:

Right breast mass lesion , Tru cut biopsy:
Invasive duct carcinoma grade III

Pathology Report

Clinical Data :

Right breast cancer , post NACT

Nature of the specimen :

Breast conservative surgery and SLNB specimens collected at 15/3/23

Gross Examination:

Two specimens were received:

*Breast conservative surgery specimen measured 6x5 cm , with covering skin elipse measured 3x2 cm. Cut section showed two clipped tumor bed sites measured 1.5x0.5 cm and 1x0.5 cm located 3 cm away from each other , the first one 0.5 cm from least medial margin and the second 0.5 cm from least lateral margin.

*SLNB: Fibrofatty tissue peice measured 3x3 cm enclosing 6 nodules up to 1x1 cm

•Frozen section:

-Free margins

-Free SLNs (0/6)

Microscopic examination:

• Histological type: Total tumor regression in a previously diagnosed carcinoma

• Lymph node involvement: Free (0/6)

• Resection Margins: Free resected margins

• Histologic response to therapy: Pathologic complete response

Diagnosis:

Right Breast cancer , post NACT , Breast conservative surgery and SLNB specimens :

-Total tumor regression in a previously diagnosed invasive carcinoma

-Free resected margins

-Free lymph nodes (0/6)
