MDT FORM

Patient Name	الأميرة الدرين محمد	Age	45
Sex	Female	Special habits	
Family History		Comorbidity	DM, HTN PSI
Surgical History		Telephone	01070302977
Menopausal Status	Post menopausal	Marital Status	Married
ID	28005162700609	Medical ID	1033/2024
Date	7/10/2025	Reason for MDT	

Medical Report

Pathology: IDC

ER 7/8 PR 8/8 HER2 +3 Ki67 60%

- Presentation: left UOQ lesion 4.3 cm, no axillary lymph nodes
- History: patient received NACTH 6* TCHP last 7/9/2024
- Underwent left BOS + SLND 4p T0 N1 (3/10), adju TDM1 *8 cycles last 28/7/2025
- Finished PORTH currently on AI / zoladex / zometa
- Breast US : 29/9/2025 BIRADS left breast BIRADS 2 right breast BIRADS 1
- Metastasis : CTCAP 28/7/2025 left internal mammary and mediastinal L.N.s
- CTCAP 27/9/2025 left breast op. Bed recurrent mass 2.3 *3.6 cm
- Abdomen and pelvis free

Recommendations :

MDT DECISION : By radiology revision, CT CAP done on 27/9 is free, confirmed by breast US
Continue remaining 4 cycles of TDM-1 + AI / zoladex + zometa / 6 m

		السيد
تخية طبية وبعد,,		
	بشأن تقرير طبي للمريض	إيماء للطلب المقدم من
	رقم طبي:	بقسم:
ننشرف بأن نوضح فيما يلي تقريراً عن حالته		
	تاريخ وساعة الخروج :	تاريخ وساعة الدخول :
وبعد الكشف والفحوصات والمتابعة وجد انه The patient received neoadjuvant chemotherapy consisting of six cycles of TC followed by five cycles of Phesgo, completed in October 2025. Subsequent surgery included left wide local excision with sentinel lymph node biopsy and completion axillary lymph node dissection. Post-operative therapy comprised a port-a-cath for Kadcyla, together with adjuvant endocrine therapy (Femara) and zoledronic acid (Zometa). On the day of the note the patient was scheduled for Kadcyla cycle 10 combined with Femara and Zometa, and also for cycles 11 and 12. The pharmacy was notified of these orders. The patient has now completed cycles 10, 11, and 12 of Kadcyla as documented. The pharmacy reported that Kadcyla was unavailable for dispensing; the patient was provided with Femara and supplemental medication. The patient has a history of left-sided breast cancer, clinical stage T2 N1 M0, estrogen-receptor positive (ER 7/8), progesterone-receptor positive (PR 8/8), HER2-negative (Her2 23+). Neoadjuvant therapy with taxane-based regimen was initiated on 8 October 2024, followed by breast-conserving surgery. Post-operative management included Zoladex, Femara, and a port for Kadcyla, which has been delayed multiple times due to elevated liver enzymes. Recent imaging (CT in July 2025) showed new mediastinal lymph nodes; PET-CT demonstrated disease free status for cycle 11 Kadcyla. The current plan includes Kadcyla 260 mg, MRI surveillance, and continuation of Zoladex and Femara pending further assessment. On the day of the note the patient was scheduled for cycle 11 Kadcyla, which had not been administered since March 2026. The patient reported having received only nine doses of Kadcyla and received Zoladex the previous month outside the institution; new imaging was ordered to evaluate response before further Kadcyla administration.

Phylogenetic Relationships

Clinical Data: soft tissue cancer, stage IV/CT
 Volume of the specimen: 101160 and clipped 101160 specimens are 101160

- **Chronic Exacerbation**
 - Spontaneous 'left' tinnitus and chronic VEE (specimen measured 10x10x5 cm with surrounding tissue capsule) measured 2.5x1.2 cm.
 - 'Tumor' malignant, 'treated' and clipped in left-hand rubbery tumour band and.
 - Size: 2.5x0.0x2.0 cm.
 - Don't understand. Nipple is red and contains creamy material.
 - Distance from nipple: 5 cm away from the skin.
 - Lymph nodes: number and size: 5 (the 5th is a piece measured 6x7 cm and weighing 1.0 g)
 - Labs up to 1x1: 2 cm.

ANALYSIS OF THE DATA

- [illegible]

Diagnoses

- No removal of tumour tissue detected ("deadly" sort of tumour?)
- Fine deep orange
- Perverse microscopically
- "Tumour necrosis syndrome" (TNF)

Went on by:
CIR Neurology + Ophthalmology

Figure 2: The (red) and (blue) curves represent the

$\frac{d}{dt} \left(\frac{\partial L}{\partial \dot{x}} \right) = \frac{\partial L}{\partial x}$

Patient Name: Elham Samir Al Din Mohamed Gebrael	Date: 29/09/2025
Exam: ultrasound BREAST (BOTH SIDE)	Age: 45 Year(s)
Medical ID: 1032/2024	Pat ID: 47953

BILATERAL BREAST HIGH RESOLUTION ULTRASOUND

INDICATION:

- Left CBS

REPORT:

- Focal parenchymal disruption is seen in the left UOQ associated with trabecular and skin thickening, all owing to the prior surgical interference.
- No suspicious mass lesions in either breast.
- Right non-specific axillary nodes, with preserved fatty hila and uniform cortical thickness.
- Free bilateral free infra and supra clavicular regions.

OPINION:

- Left post-operative sequel (scarring), (BIRADS 2)
- Right normal study, (BIRADS 1)
