Pathology Report

Clinical Data: Right breast cancer, Up-Front

Nature Specimen: Right WLE and axillary lymph node dissection.

Gross Examination

- * Right WLE specimen: Fibrofatty tissue piece measured 8.5x5x4 cm, with covering skin ellipse measured 6x3 cm
- * Tumor extent: Two ill defined firm grayish white masses.
- Size: The first mass measured 1.4x1x0.8 cm and the second mass measured 0.9x0.3 cm
- * Skin involvement: un remarkable grossly changes.
- * Distance from margins: the first mass away 2cm from the skin, 1.5 cm from both superior and inferior (least margins), 2 cm from medial , 3 cm from deep, and 4.5 cm from lateral margin.
- The second mass away 2 cm from least deep margin and away 2 cm from the first mass.
- * Right axillary lymph node dissection: A fibro fatty tissue piece measured 12x10 cm entangling 15 nodules up to 2x1.5 cm.

Microscopic Examination:

- * Right breast, WLE and Right axillary lymph node dissection:
- * Histological Type: Bifocal Invasive duct carcinoma.
- * Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- * Ductal carcinoma in situ: Focal DCIS (8%).
- * Skin involvement: Free.
- * Lymph node involvement: Free (0/15).
- * Angioinvasion: No.
- * Perineural invasion: No.
- * Resection Margins: Free.

		السيد
تحتية طبية وبعد,,		
	بشأن تقرير طبي للمريض	إيماء للطلب المقدم من
	رقم طبي:	بقسم:
نتشرف بأن نوضح فيما يلي تقريراً عن حالته		
	تاريخ وساعة الخروج :	تاريخ وساعة الدخول :
وبعد الكشف والفحوصات والمتابعة وجد انه The patient presented for follow-up and reported a performance status of 0 while on tamoxifen; supportive therapy was continued for three months. The patient, a female, was staged pre-treatment as T2, node-negative (No IDC), estrogen receptor 8/8 positive, progesterone receptor 8/8 positive, HER2 0. She underwent wide local excision with sentinel lymph node biopsy, followed by placement of a port, and has been on tamoxifen since January 2024. She returned today for continuation of tamoxifen and supportive therapy for three months; breast-sparing surgery (BSM) and a pause in therapy were discussed. The patient is currently receiving tamoxifen with supportive care for three months, with the next clinic visit scheduled for 23 September 2026.

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast swelling .
Nature of Specimen: Tru-cut biopsy .
Technique:

Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:
IPT (Positive control showed appropriate reactivity):
ER: Strong nuclear reaction in 80% of tumor cells (Allred score 8/8).
PR: Strong nuclear reaction in 80% of tumor cells (Allred score 8/8).
Her2: No membrane reaction in the tumor cells (score 0).
Ki67: 10% nuclear reaction of tumor cells.

Conclusion:
Right breast swelling , Tru-cut biopsy:
Invasive duct carcinoma, Grade II.
T:
ER: Positive (score 8/8).
PR: Positive (score 8/8).
Her2: Negative (score 0).
Ki67: Positive in 10% of tumor cells.

Scoring system: "ER, PR"
IHC-CAP ER/PR Test Guideline Recommendations, 2010 Allred score: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 68% and

Patient Name: Warda Ali Ahmed Salman	Date : 13/11/2023
Exam : MAMMOGRAPHY BOTH	Age : 46 Year(s)
Medical ID: 27709202601007	Pat. ID: 43963

**DIGITAL BILATERAL SOFT TISSUE MAMMOGRAPHY AND
COMPLEMENTARY ULTRASOUND**

Indication:

- Right breast palpable mass (IDC)

Report:

- Right Breast:
 - ACR B
 - UOQ peripherally-located partially obscured high density irregular mass lesion is seen measuring 18x 12 mm . U/S revealed correlate malignant-looking mass at 9 o'clock, measuring about 15x 10 mm. It is located at 2 mm depth from skin. No evidence of pectoral muscle involvement.
 - Dilated retro-areolar ducts.
 - No pathological enlarged axillary or supraclavicular lymph nodes.
- Left Breast:
 - ACR B
 - No suspicious micro calcifications or architectural distortion detected.
 - no suspicious solid mass lesions.
 - Few scattered small simple cysts.
 - Dilated retro-areolar ducts.
 - Normal skin thickness, and nipple-areola complex
 - Nonspecific axillary LN.

Opinion:

- Right breast UOQ (9 o'clock) peripheral malignant-looking mass lesion (BIRADS 6).
- Left breast: Duct ectasia and few small cysts (BIRADS 2)

Patient Name: Warda Ali Ahmed Salman	Date : 03/04/2025
Exam : ultrasound BREAST (BOTH SIDE)	Age : 47 Year(s)
Medical ID: 4134/2023	Pat. ID: 43963

**BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION
ULTRASOUND**

Indication:

Patient had right CBS

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR B)
- Right breast UOQ focal area of parenchymal distortion owing to prior surgical interference, with post-operative scarring and diffuse edema pattern in the form of increased trabeculations and skin thickness.
- Left UOQ posterior third IMLN, being nonspecific confirmed by US.
- Complementary ultrasound showed right breast UOQ focal parenchyma distortion, owing to prior surgical interference with clear operative bed with no evidence of recurrent mass lesions.
- no left breast solid or cystic mass lesions, normal skin thickness and nipple-areola complex.
- Nonspecific left axillary LN, with preserved fatty hila and uniform cortical thickness.
- Free right infra and supra clavicular regions.

Opinion:

- Right breast focal parenchymal distortion owing to prior surgical interference (CBS) with post-operative sequel, with free operative bed with no evidence of recurrent mass lesions
- No left breast suspicious findings
- (BIRADS 2)

Yours truly

Patient Name: Warda Ali Ahmed Salman	Date : 17/07/2024
Exam : ultrasound TRANS VAGINAL	Age : 46 Year(s)
Medical ID: 4134/2023	Pat. ID: 43963

Trans vaginal ultrasound scanning revealed: -

○ **Uterus: -**

- *AVF, average size uterus measuring about: 8x4x4cm in its longitudinal, transverse & AP diameters respectively.*
- *The myometrium shows homogenous texture with no focal lesion*
- *The endometrial line is 5mm. IUCD is in place.*

○ **Ovaries: -**

- *Both ovaries are average size with no focal lesion*
- *No gross adnexal soft tissue masses or cysts.*
- *No free fluid in the Douglas pouch.*

Conclusion:

Unremarkable study

MULTI-SLICE POST CONTRAST CT SCAN OF THE CHEST, ABDOMEN & PELVIS WITH CORONAL RECONSTRUCTION: -

***** Known case of Right breast ca. showing;**

Findings:

I. CHEST

- Bilateral axillary small lymph nodes.
- No pulmonary consolidations, nodules or cavitations.
- No evidence of pleural effusion.
- Normal cardiac size and shape. No pericardial effusion detected.

II. ABDOMEN & PELVIS

- The liver is of average size with homogenous CT texture. No focal lesions or contour irregularities.
- No intra-hepatic or extra-hepatic biliary radicle dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both supra renals.
- No abdominal lymph node enlargement seen.
- No ascites or abdominal collections noted.

Dr. Sheriff Abdel-Fatah, M.D.
