تقرير طبي

السيد
تحية طبية وبعد,,

إيماء للطلب المقدم من	بشأن تقرير طبي للمريض
بقسم:	رقم طبي:

نتشرف بان نوضح فيما يلي تقريراً عن حالته
--

تاريخ وساعة الدخول : -- --:-- yyyy-mm-dd	تاريخ وساعة الخروج : PM 01:17 05-07-2026
---	---

وبعد الكشف والفحوصات والمتابعة وجد انه
--

المریضة تعاني من ورم غير حميد بالثدي و تحتاج الي Contrast-enhanced CT scan of the neck, chest, abdomen, and pelvis.

التاريخ : 05-07-2026	الوقت : -- --:--
	الطبيب المعالج : د/شيماء لاشين

PATIENT NAME: Mai Hamdi Mohammed Shehata**GENDER:** Female**DATE :** 30-Apr-2025 12:31 PM**PATIENT ID:** 2019097043**AGE:** 38 y**ORDER:** 3352630**99MTC-MDP BONE SCAN****Desired Information:** -
skeletal survey.**Technique:**

Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

Report:

No hot spot that account for osseous deposits could be detected all over the surveyed skeleton.

Mild Degenerative changes are seen over lumbar vertebrae.
Both kidneys are normally visualized.

Conclusion:

No definite evidence of metastatic osseous deposits.

Reported By,**Prof. Huda Fathy, Nuclear Medicine Consultant****01-May-2025 03:28 PM**

PATIENT: Mai Hamdi Mohammed Shehata, 2019097043, Female, 38 y

Primary Sample :

Paraffin Block

Test :

ER & PR & HER2 neu (ER&RP : Harvey scoring system - Her2neu : CAP scoring system)

Comment :

Technique :

sample recieved was treated by : - CONFIRM anti-estrogen (ER) (SP1) Rabbit monoclonal primary antibody.- CONFIRM anti-progesterone receptor (PR) (IE2) Rabbit monoclonal primary antibody.

Sample recieved was treated by : - VENTANA anti-HER2/neu (4B5) Rabbit monoclonal primary antibody using DAB Detection kit in ventana benchmark GX.

Result :

ER: moderate nuclear staining of 80 % of tumour cells
PR: moderate nuclear staining of 80% of tumour cells
HER2/neu protein over expression: discontinuous membrane staining of invasive tumor cells.

Referral Lab :

Comment :

Conclusion :

ER: POSITIVE (SCORE 7/8)

PR: POSITIVE (SCORE 7 /8)

HER2/NEU PROTEIN OVER EXPRESSION : NEGATIVE (SCORE 1+) OF INVASIVE TUMOUR CELLS (CORE BIOPSY)

Pathology Report

Name: مى حمدى محمد شحاته

Age: 33 years.

Clinical data: Left breast mass.

Specimen type: Tru cut biopsy.

Date: 19/8/2019

Lab. Number: 701

Hospital Number: 865/2019

Gross Description:

Multiple soft tan admixed with yellow cores, the longest is 1.5 cm, totally submitted.

Microscopic Examination:

Section examined revealed cores of breast tissue showing invasive files and tubules of moderately anaplastic ductal epithelial cells, associated with 10% DCIS, cribriform pattern and fair desmoplastic stroma.

Diagnosis:

Left breast mass, core biopsy;

Invasive duct carcinoma GII with about 10% DCIS for ER, PR, HER2 and KI67).

Prof. Dr. Amal Haridy

Prof. Dr. Essam Ayad

Pathology Report

Name: مي حمدي محمد

Age: 34 years.

Clinical data: Left breast, Post MRM, complicated cyst

Specimen type: US guided Aspiration.

Date (Received): 24/4/2021

Date (reported): 4/4/2021

Lab. Number: C- 84/21

Hospital Number: 3284/19 نفقة

Gross Description:

13 ml of turbid yellowish fluid.

Microscopic Examination:

Cytological examination of the smears prepared revealed hypocellular smears consistent with mild Inflammatory smears, free from cytological malignancy

Diagnosis:

Left breast, Post MRM, complicated cyst, US guided aspiration;

Hypocellular smears consistent with mild Inflammatory smears, free from cytological malignancy

Prof. Dr. Amal Hareedy.

Dr. Marwa Mahmoud

Pathology Report

Name: مي حمدي محمد شحاته

Age: 34 years.

Clinical data: Left breast mass, post chemotherapy.

Specimen type: Skin sparing mastectomy & axillary clearance.

Date: 14/3/2020

Lab. Number: 479

Hospital Number: 3284/2019

Gross Description:

Skin sparing mastectomy specimen; 20x15x4 cm, including nipple and areola, attached axilla; 5x4 cm. Serial cuts revealed an ill-defined firm greyish white mass measured 1.2x1 cm, located in the lower outer quadrant of the breast about; 5 cm away from nipple with least resection margin is the deep margin; 2.5 cm away.

Rest of breast showed rubbery greyish white areas, admixed with mammary fat.

Axillary dissection revealed 9 nodules, up to 1.7x1.5 cm.

Microscopic Examination & Diagnosis:

Left breast mass, post chemotherapy, skin sparing mastectomy & axillary clearance;

- Multicentric invasive duct carcinoma GII.
- 10% DCIS.
- Minimal necrosis.
- Free nipple, areola & resection margins.
- Free axillary lymph nodes 0/19.
- Tumor stage ypT1 ypN0.

Patient Name: Mai Hamdy Mohamed Shehata	Date : 22/01/2024
Exam : MAMMOGRAPHY BOTH	Age : 37 Year(s)
Medical ID: 3284/2019	Pat. ID: 28546

RIGHT BREAST MAMMOGRAPHY WITH BILATERAL US

Indication:

Patient had left MRM with muscle flap reconstruction

Technique

- right breast MLO and CC views
- Bilateral ultrasound

Report:

- The right breast is scattered fibroglandular densities of the right breast (ACR B)
- No spiculated masses or grouped microcalcifications.
- Complementary ultrasound also showed no right breast solid or cystic masses
- Normal skin thickness and nipple-areola complex, with average caliber of the retro-areolar ducts
- Nonspecific right axillary LN, with preserved fatty hila and uniform cortical thickness.
- Free left operative bed with no evidence of recurrent mass lesions, apart from stationary LIQ dystrophic macrocalcifications, with no underlying suspicious findings seen by US
- Free left infra and supra clavicular regions.

Opinion:

- Left MRM with free operative bed with no evidence of recurrent mass lesions
- No right breast suspicious findings (BIRADS 2)

Yours truly

RIGHT BREAST MAMMOGRAPHY WITH BILATERAL US

Indication:

Patient had left MRM with muscle flap breast reconstruction

Technique

- BOTH breast MLO and CC views
- Bilateral ultrasound

Report:

- The right), scattered fibroglandular densities of the right breast (ACR B)
- No spiculated masses or grouped microcalcifications.
- Complementary ultrasound also showed no right breast solid or cystic masses
- Normal skin thickness and nipple-areola complex, with average caliber of the retro-areolar ducts
- Nonspecific right axillary LN, with preserved fatty hila and uniform cortical thickness.
- Free left operative bed with no evidence of recurrent mass lesions with post operative dystrophic calcification and oil cyst.
- Free left: infra and supra clavicular regions.

Opinion:

- Left MRM with muscle flap breast reconstruction with free operative bed with no evidence of recurrent mass lesions BIRADS II
- No right breast suspicious findings (BIRADS I)

Mammography Report

الاسم: مي حمدي محمد
تاريخ: ٢٠١٩/٧/٢١

Bilateral Digital Mammogram

- ♦ Normal skin, nipple and subcutaneous tissue.
- ♦ Heterogeneous dense fibroglandular breast parenchyma ACRC.
- ♦ Left UOQ area of architectural distortion.

Opinion:

- Left UOQ asymmetrical distortion for breast US.
- BIRADS (0).

Signature
Fatma Salah El Din, MD.
Consultant of Radiology.

Refernces of BIRADS Classification:

BIRADS classification of breast lesions according to the American collage of radiology used for breast assessment combined with recommendations:		
Category & recommendations		Suspected Cancer Risk
Category (0)	Non-informative study..	
Category (1)	Normal study, routing screening.	0%
Category (2)	Benign findings, routing screening.	0%
Category (3)	Probably benign, for close follow up.	2%
Category (4)	Probably malignant, for biopsy.	50%
	A: mild suspicion	
	B: moderate suspicion	
	C: high suspicion.	
Category (5)	Malignant, for biopsy.	98-100%
Category (6)	Pathological proven malignant lesion.	

Name: Mrs. May hamdin mohamed

Date : 1 April 2021

Trans-vaginal ultrasound scanning revealed: -

○ **Uterus: -**

- AVF, average sized uterus for age measuring about:
10x54x45 cm in its longitudinal, transverse & AP diameters respectively.
- Endometrial thickness measures about: 4 mm, contraceptive device seen insitu.
- No gross myometrial focal lesions

○ **Ovaries: -**

- The right ovary is average in size and echopattern.
- The left ovary shows multiple simple ovarian cysts , the largest is 34mm
- No free fluid in the Douglas pouch.

Conclusion:

Left ovarian simple cysts.

Best regards

Dr/Daaa Ahmed , FEBR, MD.

Name : MAY HAMDY

Date : 16-11-2019

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST,
ABDOMEN & PELVIS WITH CORONAL RECONSTRUCTION: -**

Chest:

- Few tiny bilateral millimetric pulmonary nodules are noted.
- Clear both lung fields. No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

Abdomen:

- The liver is enlarged in size with homogenous low CT texture. No focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Bulky uterus with IUD seen inside.
- Reviewing skeletal parts revealed bilateral ilitis condensans.

OPINION:

- ***Few tiny bilateral millimetric benign looking pulmonary nodules.***
- ***Fatty hepatomegaly with no focal lesions.***
- ***No evidence of lytic or sclerotic osseous lesions.***

DR. Ibrahim Elsedawy.M.Sc

Dr.m.gomaa,md

Patient Name: Mai Hamdy Mohamed Shehata	Date : 09/02/2023
Exam : MAMMOGRAPHY BOTH	Age : 36 Year(s)
Medical ID: 3284/2019	

**BILATERAL BREAST MAMMOGRAPHY AND HIGH
RESOLUTION ULTRASOUND**

Indication:

Left breast mastectomy with reconstruction

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- Scattered fibro glandular density (ACR B)

Left breast:

- LIQ well circumscribed lucent mass seen by US as 8O'clock as well circumscribed oval shaped complex solid and cystic mass , measured about 1.7x2.0 cm . minimal vascularity detected inside the solid part
- No sizable collection
- Diffuse edema pattern in the form of increased trabeculations and skin thickness.
- No regional lymphadenopathy

Right Breast:

- No suspicious micro calcifications or architectural distortion detected.
- No spiculated mass
- Normal retro-areola ducts
- Normal skin thickness, and nipple-areola complex
- Nonspecific axillary LN.

Opinion:

- Post MRM status showing 8 fat necrosis , however regarding internal vascularity ,
- Normal study of the right breast (BIRADS 1)

Best regards,
Dr/Asmaa Zeinhom, Msc

Name: may hamdy mohamed
Date: 1 April 2021

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- enlarged in size (about 19 cm at the right MCL), smooth outline, bright echopattern.
- No intra hepatic biliary radicle dilatation.
- Portal vein is not dilated and patent .

Gall Bladder: -

- Average size . , normal wall thickness, no stones.
- CBD is not dilated.

Spleen: -

- Average size (About 10 cm), displaying homogenous echopattern.

Kidneys: -

Are of normal size , site , well differentiated & with no gross stones or backpressure changes. no solid or cystic lesion.
-Para-aortic and pancreatic area: no gross lesion
No ascites.

Urinary Bladder: -

- Average capacity with no stones, masses or diverticular out pouching

Uterus : average in size , normal endometrial line , no focal lesion.

Both ovaries : the right ovary is average in size and echopattern , the left ovary shows multiple simple cysts , (the largest is measuring 35).

Opinion:

- Bright enlarged liver (fatty)..
- Left simple ovarian cysts (likely functional for follow up.

Best regards
