تقرير طبي

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من	بشان تقرير طبي للمريض
بقسم:	رقم طبي:

نتشرف بان نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول : ---:-- yyyy-mm-dd	تاريخ وساعة الخروج : PM 01:17 05-07-2026

وبعد الكشف والفحوصات والمتابعة وجد انة

المريضة تعاني من ورم غير حميد بالثدى و تحتاج الي Contrast-enhanced CT of chest, abdomen and pelvis.

التاريخ : 05-07-2026	الوقت : -- --:--
	الطبيب المعالج : د/شيماء لاشين

^{18}F FDG WHOLE BODY FOLLOW UP PET/CT

- Whole body 18F-FDG images from skull to the knees with the arms extending above the head were obtained approximately 1 hour after tracer injection.
- CT was acquired for the purpose of anatomic localization and attenuation correction
- Data was processed and displayed according to departmental protocol.

Review of PET. CT and fused imaaes

Compared to the previous PET/CT scan dated 21.7.2025 , the current study revealed:

BRAIN

- No evidence of intra-cerebral or extra-axial fresh blood density.
- Normal size and configuration of the ventricular system and subarachnoid basal cisterns as well as the cortical sulci on both sides.
- No definite cerebral areas of abnormal attenuation value or pathological enhancement.
- No shift of midline structures.
- Normal posterior fossa.
- Clear scanned para-nasal sinuses.

NECK:

- Normal CT appearance of valeculae, pyriform fossae and aryepigolottic folds.
- Patent nasopharyngeal and oro-pharyngeal air column.
- Bilateral deep cervical, subcentemetric benign looking lymph nodes with no pathological tracer uptake , likely non specific.
- Normal CT appearance of the parotid and submandibular salivary glands.
- Normal appearance of the thyroid gland.
- Normal appearance of the carotid sheath and its contents

CAIRO SCAN
Radiology & LABS

Pat. Name: Hanan Hamdy Hassan
Date: 01/10/2025

Pat. ID: 3413269

CHEST:

- Status post operative with the right breast showing parenchymal soft tissue distortion thickened skin and retracted nipple and deep surgical sutures with no pathological tracer uptake likely representing post operative sequelae. NO FDG avid recurrent neoplastic lesions detected
- Clear both lung fields with no evidence of metabolically active pulmonary nodules, masses, infiltrations or bronchiectatic changes.
- No pleural collection.
- stable minimal pericardial effusion
- No metabolically active grossly enlarged hilar, mediastinal or axillary lymph nodes.
- Normal CT appearance of the heart, aorta and its great branches.
- stable hiatus hernia

ABDOMEN AND PELVIS:

- Enlarged liver showing smooth regular outline with homogenous low parenchymal texture. No evidence of definite metabolically active enhanced focal hepatic masses or bile duct dilatation.
- Patent homogenously enhancing portal vein and its main branches.
- Normal CT appearance of the spleen, pancreas, suprarenal glands, kidneys, aorta, IVC and pelvic organs.
- No metabolically active grossly enlarged abdominal or pelvic lymph nodes.
- No ascites.

MUSCULO-SKELETAL

- **Stationary course of the heterogeneous low grade metabolically active mixed sclerotic and lytic skeletal lesions involving multiple cervico-dorso-lumbar vertebrae , multiple ribs bilaterally, multiple pelvic bones including the sacrum, sternum, both scapulae, both clavicles, both humeri and femora including the right sided osteolytic lesion centered upon the right iliac bone and right inferior pubic ramus with pathological fractures and reduced height/partial structural**

Date : 10/12/2024 Code : 3187758

3D FULL FIELD DIGITAL MAMMOGRAPHIC EXAMINATION OF BOTH BREASTS:

CLINICAL SUMMARY : conservative right breast cancer surgery.
IMPRESSION :
LEFT BREAST: (BIRADS 1)
Normal study

RIGHT BREAST: (BIRADS 2)
Post-operative changes

RECOMMENDATION :-
- For routine annual follow up with next examination due December 2025

DETAILED FINDINGS :

TECHNIQUE:

Craniocaudal & Mediolateral Oblique views
Tomosynthesis in 1mm slice thickness
High resolution ultrasound with color Doppler

Both breasts showed scattered fibroglandular tissue, (ACR b).

LEFT BREAST:

- No dominant mass lesion, spiculations or suspicious microcalcifications.
- This was confirmed by 3D Tomosynthesis 1mm section images
- Complementary ultrasound revealed no suspicious masses.
- No signs of malignancy detected.
- Normal skin/nipple/areolar complex.
- Preserved axillary lymph nodes.

RIGHT BREAST:

- Post-operative changes in the form of scarring at the UOQ, mild diffuse skin thickening..
- No suspicious mass lesion, spiculations or suspicious microcalcifications.
- This was confirmed by 3D Tomosynthesis 1mm section images and ultrasound.
- No signs of malignancy detected.
- No pathological axillary lymph nodes.

Thanks for your Reference,
Dr Hanaa Abo El Magd

Follow up F-18 Fluorodeoxyglucose (FDG) PET/CT of the whole body:

❖ **Clinical History:**

- female known with right breast cancer, underwent conservative surgery followed by CTH and RTH for assessment

❖ **Procedure:**

- Dose/Radiopharmaceutical: mCi F-18 Fluorodeoxyglucose (FDG) was administered via a peripheral upper limb vein.
- Blood glucose level: mg/dL.
- Imaging was performed on an integrated PET/CT scanner approximately 60 minutes after injection of the radiopharmaceutical.
- No IV contrast given.
- PET/CT images were reviewed in the transaxial, coronal and sagittal planes.
- The Standardised Uptake Value, maximum variant (SUV max) was calculated within regions of interest whenever needed

❖ **Findings**

Compared to previous PET CT dated 11/12/2024 in our PACS.

Head and Neck:-

- The brain appears normal on CT, with no abnormal focal lesion detected.
- No enlarged active cervical lymphadenopathy.
- Normal appearance of the oropharynx, larynx, thyroid and salivary glands.
- Normal appearance of the rest of the soft tissues of the neck.

Chest:

- Status post operative , of the right breast showing parenchymal soft tissue distortion thickened skin and

retracted nipple and deep surgical sutures , likely representing post operative sequelae. NO FDG avid recurrent neoplastic lesions detected.

- No pleural effusion
- Clear both lung fields with no FDG avid pulmonary nodules or other parenchymal abnormalities demonstrated.
- Minimal pericardial effusion noted
- No enlarged axillary, supra-clavicular, hilar or mediastinal lymph nodes could be detected.
- Normal appearance of the myocardium and great vessels.
- Slidung hiatus hernia.

Abdomen and Pelvis:

- Liver is of enlarged in size measuring about 17.1 cm along the MCL , showing homogenous texture and smooth outline.
- No hepatic focal lesions or biliary radicles dilatations could be noted on non contrast bases
- Normal CT appearance of the spleen, pancreas, adrenals, both kidneys, aorta and IVC
- Bulky RVF uterus
- No enlarged abdominal or pelvic lymph nodes.
- No ascites.

Muscio-skeletal:

- Moderate to marked metabolic REGRESSION of the old Multiple mixed blastic and lytic skeletal lesions involving the axial skeleton , both proximal humeri and femora including the Right sided osteolytic mass lesion centered upon the right iliac bone still the most active lesion with SUV max 3.5 (previously was 6.2).
- Bilateral sacroilitis
- Spondylodgenerative changes of the spine

Whole Body F-18 FDG PET/CT EXAMINATION:

Clinical History:

- *Female patient with history of managed breast cancer.*
- ***PET/CT requested for assessment.***

Technique:

- *For the foremented patient we have done a total body PET scan one hour after IV injection of 370 MBq of 18 F-FDG. MSCT was performed simultaneously and used for attenuation correction, anatomical localization and diagnosis.*

Comparison done with PET-CT dated 1-10-2025.

Report

Hepatic reference activity: 2.9

Regions of interest:

Status post right breast CBS; still no abnormal FDG avid lesions to suspect local tumor recurrence.

Haematology
COMPLETE BLOOD PICTURE

				Ref. Range
Red cell count	4.11		x10^6/cmm	3.8 - 4.8
Hemoglobin	10.4	L	g/dl	12 - 15
Haematocrit HCT	32.9	L	%	36 - 45
MCV	80.0	L	fl	84 - 101
MCH	25.3	L	pg	27 - 32
MCHC	31.6		%	31.5 - 34.5
R.D.W.	12.9		%	11.6 - 14
Platelet count	160		10^3/cmm	150 - 450
White cell count.	8.67		10^3/cmm	4 - 11

Interpretive Criteria :

Differential leucocyte Count

	Relative			Absolute	
	Result %		Normal	Result /cmm	Normal
Basophils	0	%	0 - 2	0	0 - 100
Eosinophils	1	%	1 - 6	87	20 - 500
Monocytes	7	%	1 - 10	607	200 - 1,000
Lymphocytes	20	%	20 - 45	1734	1,000 - 4,000
Neutrophils	72	%	40 - 80	6242	2,000 - 7,000
Seg.	70	%	0 - 80	6069	
Bands	2	%	0 - 6	173
