Detailed Medical Report

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من		**بشأن تقرير طبي للمريض**	
بقسم:		**رقم طبي:**	

ننشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انه

The patient was previously diagnosed with premenopausal metastatic breast cancer involving lung and lymph nodes, with recent development of bone metastases (IDC2, ER-ve, PR 3/8, HER2+, Ki-67 35%). The oncologic history includes right-sided breast cancer diagnosed in 2023, staged as cT4b N2, for which the patient received six cycles of taxotere and carboplatin without anti-HER2 therapy. Post-operative radiotherapy was administered in September 2023, followed by progression with right internal mammary and left axillary lymph node involvement and pulmonary nodules. From October 2023 to January 2024 the patient was treated with capecitabine (Xeloda) and trastuzumab, then lost to follow-up until September 2024 when disease progression prompted initiation of gemcitabine (Gemzar) plus pertuzumab (Tykerb), administered for seven cycles until February 2025. After another loss to follow-up, the patient received weekly paclitaxel (Taxol) for 22 weeks, concluding in February 2025. Imaging on 30 March 2026 demonstrated progressive disease of the left breast and axillary nodes, sternal and right first-rib soft-tissue components, and new lytic lesions of the D1 and D2 vertebral bodies, prompting a multidisciplinary team (MDT) review. The patient has completed six cycles of taxotere/carboplatin, seven cycles of gemcitabine/pertuzumab, and 22 weeks of weekly paclitaxel.

On examination, the patient exhibited right chest-wall skin nodules and right cervical lymphadenopathy. The MDT in May 2026 recommended rechallenge with capecitabine (Xeloda), trastuzumab, and zoledronic acid (Zometa) on a 28-day schedule, targeting the right first-rib soft-tissue component. Dental evaluation was pending approval of trastuzumab. The prescribed capecitabine regimen was 3 × 2 × 14 (WT 65 HT162 SA 1.7). The patient has completed three cycles of capecitabine as described.

The patient presented for a follow-up on 22 August 2026, receiving capecitabine (C2) at the same 3 × 2 × 14 dosing schedule. Laboratory results were acceptable for proceeding with the planned dental consultation prior to zoledronic acid administration. The current plan is to continue the capecitabine regimen pending dental clearance.

MULTISCLICE POST CONTRAST C.T. EXAMINATION OF THE CHEST, ABDOMEN AND PELVIS REVEALED:

A known case of managed right breast cancer

Compared to last study dated 13-4-2025

I- CHEST:

- Right MRM showed clear operative bed with no enhanced focal lesions or fluid collection.
- The left breast showed UOQ soft tissue mass lesion shows progressive coure a regard the size measures about 7 x 2.6 compared to 6.2x2.35 cm causing skin retraction and associated with enlarged ipsilateral axillary lymph nodes, the largest measures about 2x1.7 cm **for further sono-mammography**
- Bilateral mosaic parenchymal pattern with air trapping denoting small air way disease.
- Left apical and right lung lobes thick atelectatic bands are noted
- No pathological mediastinal lymph node enlargement.
- No pleural or pericardial collection.
- Normal plain CT appearance of the heart and great vessels.
- Enlarged right copula of diaphragm.

II- ABDOMEN AND PELVIS:

- Average sized liver showing homogenous fatty parenchymal attenuation. No hepatic focal lesion or dilated biliary radicles.
- The gall bladder is well distended, average wall thickness with no stones.
- Both kidneys are normal site, average sized and showing smooth regular cortical outline and preserved parenchymal thickness and function. No stones or back pressure changes.
- Normal C.T appearance of the spleen, pancreas, suprarenal glands, aorta and IVC.
- The urinary bladder shows no evidence of gross masses or diverticulae or stones.

CT Scan

جوستاف روسي

Patient's Name:	**mona mohamed ahmed**
Date:	**2026-03-30**
Referred by:	Prof.Dr. **ct cap iv**
Hospital:	**Goustave Roussey International Egypt**

- Normal appearance of the pelvic organs with no pelvic masses or collections.
- Right caval lymph node measures about 16x11.7mm with multiple few aortic lymph nodes.
- No ascites.
- **The examined skeleton**
  - Progressive course as regard The previously noted sternum and right 1st rib soft tissue mass component measures about 6 x3 cm compared to 5x4.5 cm at sternum and 5.5x4.5 comapared to 5.5 x4 cm at 1st rib.
  - Lytic lesions with selrotic margins seen at cervical vertebral and D1,D2 vertebral bodies.
  - **For further bone scan**

Opinion:

- **STILL SEEN Bilateral mosaic parenchymal patterns with bilateral thick atelectatic bands.**
- **Few abdominal lymph nodes enlargement**
- **Progressive course as regard the Left breast mass lesions with enlarged axillary lymph nodes Sternum and right 1st rib lytic lesions with soft tissue component likely metastasis**

Medical ID: 596/2023	Pat. ID: 28132

Post-CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN & PELVIS REVEALED: -

*****As Compared to the previous study dated last study 08-12-2024, current study shows:***

Chest:

- Right mastectomy showing no gross operative bed masses or collections.
- **Mixed course** regarding the size and increase in number of the enlarged left axillary lymph nodes, the largest measures about 5.1 9X3.5 cm compared to 4.5x3.6 cm and seen inseparable from the overlying skin.
- **progressive course** regarding the size of right internal mammary LNs, the largest measures 4X 3.4 cm compare to 1 cm currently infiltrating the sternum with extraosseous soft tissue component.
- **Progression in size of the** Left upper lung lobe apico-posterior nodules the largest measures 3.7X4.3 cm compared 2.7x2.2 cm previously.
- **Progression of enlarged** right supraclavicular the largest measures about 4.6x 2 cm with currently seen infraclavicular nodes ? nodular density
- **Still noted** mildly enlarged right axillary lymph nodes,.
- **Newly developed** the right middle and lower subsegmental atelectatic bands
- No pathological hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Average cardiac size. No pericardial effusion detected.

Abdomen and pelvis:

- The liver is enlarged with homogenous CT texture. No definite focal lesions or biliary radicles dilatation
- Normal size & parenchymal texture of the spleen with no focal lesions seen, No pathological abdominal or pelvic lymph nodes.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal non contrast appearance of the pancreas and both supra-renals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.

The scanned skeleton:

- Stable D6 vertebral body sclerotic area is seen with heterogenous osseous texture of the examined bones.

OPINION:

- **Status post right mastectomy showing**
  - **Mixed course regarding left axillary lymph nodes**

Pathology Report

Clinical Data: Left breast malignant looking solid mass lesion.
Nature of Specimen: Tru-cut biopsy, collected at 1/8/2024.

Gross Examination:
- Multiple grayish white tissue cores up to 1.8 cm, totally submitted.

Microscopic Examination:
- Histological type: Focally necrotized invasive duct carcinoma.
- Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
- Ductal carcinoma in situ: Negative.
- Perineural invasion: Negative.
- Angioinvasion: Negative.
- Microcalcifications: Negative.

Diagnosis: (Revised)
Left breast malignant looking solid mass lesion, Tru-cut biopsy:
Focally necrotized invasive duct carcinoma, Grade II.
For further IHC (ER, PR, Her2, Ki67).

IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Left breast malignant looking solid mass lesion.
Nature of Specimen: Tru-cut biopsy, collected at 1/8/2024.

Technique:
- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & KI67 clone (30-9).

Results:
* IPT (Positive control showed appropriate reactivity):
- ER: No nuclear reaction in the tumor cells (score 0/8).
- PR: Weak nuclear reaction in 1% of tumor cells (score 2/8).
- Her2: Strong complete membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 25% nuclear reaction of tumor cells.

Conclusion:
Left breast malignant looking solid mass lesion, Tru-cut biopsy:
Focally necrotized invasive duct carcinoma, Grade II (revised).
IPT:
- ER: Negative (score 0/8).
- PR: Negative (score 2/8).
- Her2: Positive (score 3+).
- Ki67: Positive in 25% of tumor cells.

* Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1,
