تقرير طبي

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من	**بشأن تقرير طبي للمريض**
بقسم:	**رقم طبي:**

نتشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول : -- --:-- yyyy-mm-dd	**تاريخ وساعة الخروج :** PM 01:17 05-07-2026

وبعد الكشف والفحوصات والمتابعة وجد انة

المريضة تعاني من ورم غير حميد بالثدى و تحتاج الي Supportive and palliative Treatment

التاريخ : 05-07-2026	**الوقت :** -- --:--
	الطبيب المعالج : د/شيماء لاشين

MULTISCLICE POST CONTRAST C.T. EXAMINATION OF THE CHEST, ABDOMEN AND PELVIS AFTER ORAL AND I.V. CONTRAST INJECTION REVEALED:

A known case of left breast CA with very dense mammary parenchymal pattern of the breast and an enhancing neoplastic lesion seen in its UOQ ,with central area of breaking down and /or cystic degeneration,irregular outlines and measures about 41 x33 mm in dimensions. The overlying skin is thickened and measures about 16mm. Multiple variable sized pathologically-enlarged left axillary lymph nodes are also seen and globally measure about 71x52mm in dimensions.

1-CHEST:

- A subpleural pulmonary nodule is seen in the middle lobe and in the posterior segment of both lower pulmonary lobes. The former is the largest one and measures about 10 mm
- Ground-glass opacities/ linear atelectatic bands are seen scattering in both pulmonary lobes with bilateral increased broncho-vascular markings and basal bronchiectatic changes.
- No calcified pulmonary foci or cavitary lesions.
- No sizable abnormally-enhancing hilar or mediastinal masses or lymph node enlargement.
- No pleural or pericardial collection.
- Increased size of the heart and mild atherosclerotic changes seen in its great vessels.

2-ABDOMEN AND PELVIS:

- Mildly increased size of the liver,measuring about 16.5 cm, showing diffuse low parenchymal attenuation. No sizable abnormally-enhancing hepatic focal lesions or dilated biliary radicles.

- Patent PV.
- Relatively thickened left adrenal gland.
- Normal C.T appearance of the spleen,measuring about 9.2 cm, pancreas, functioning both kidneys(apart from relatively smaller left kidney), right suprarenal gland, aorta and IVC.
- No sizable abnormally-enhancing abdominal/pelvic lymph nodes seen.
- The urinary bladder shows no evidence of gross masses or diverticulae or stones.
- An IUCD is seen within the uterine cavity.
- Normal appearance of the pelvic organs with no pelvic masses or collections.
- No ascites.
- **Spondylo-degenerative changes of the scanned spine with no definite osteolytic/osteosclerotic bony lesions seen.**

IMPRESSIONS:

A known case of left breast CA with an enhancing neoplastic lesion in its UOQ ,having the above-mentioned criteria and extensions.The overlying skin is thickened with multiple variable sized pathologically-enlarged left axillary lymph nodes and subpleural pulmonary nodules noted in the middle lobe and in the posterior segment of both lower pulmonary lobes and relatively thickened left adrenal gland,likely to be metastatic in nature.

- Ground-glass opacities/ linear atelectatic bands scattering in both pulmonary lobes with bilateral increased broncho-vascular markings and basal bronchiectatic changes,likely to be inflammatory reactions.
- Mild hepatomegaly with fatty infiltration and no focal lesions.
- For clinical check up.

Prof/Hanan El-Ahwal.

Pathology Report

Name: فاطمة سليمان على زايد	**Age: 63 years**
Clinical data: Left breast mass	
Specimen type: Tru cut biopsy	
Date (Received): 2 /8/2021.	**Date(reported): 15 /8/2021**
Lab. Number: 1650/ 21	**Hospital Number:** صحة مراه

Gross Examination:

Multiple grayish white tissue cores, longest 1.5 cm. Totally submitted.

Microscopic examination:

Histopathological examination of sections prepared from the Tru cut specimen received reveals an infiltrating malignant epithelial growth. The tumor is made up of groups and small sheets of pleomorphic hyperchromatic malignant ductal epithelial cells. Stromal desmoplasia is moderate. Cellular and nuclear atypia are moderate [grade II]. No intraduct component is detected . No lymphovascular invasion .

Diagnosis:

Left breast; Tru cut biopsy:

Invasive duct carcinoma, Grade II .

Biomarkers:

- **ER: Strong nuclear reaction in 90% of tumor cells (Allred score 8/8)**
- **PR: Strong nuclear reaction in 90% of tumor cells (Allred score 8/8)**
- **Her-2: Faint incomplete membrane reaction in < 10% of tumor cells , negative (score 1)**
- **Ki 67: 40 % nuclear reaction**
