تقرير طبي

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من	بشأن تقرير طبي للمريض
بقسم:	رقم طبي:

نتشرف بأن نوضح فيما يلي تقريرا عن حالته

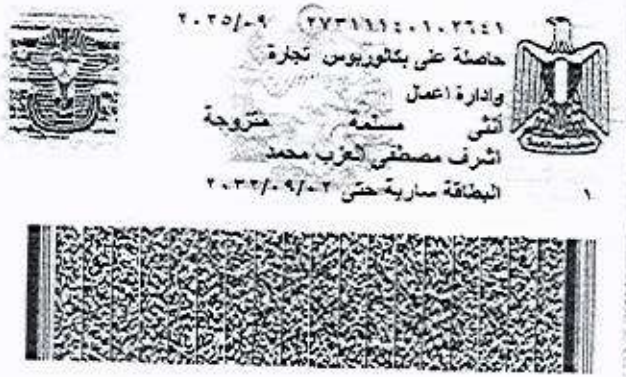

تاريخ وساعة الدخول : -- --:-- yyyy-mm-dd	تاريخ وساعة الخروج : PM 01:17 05-07-2026

وبعد الكشف والفحوصات والمتابعة وجد انة

المريضة تعاني من ورم غير حميد بالثدى و تحتاج الي Further investigations and imaging

التاريخ : 05-07-2026	الوقت : -- --:--
	الطبيب المعالج : د/شيماء لاشين

Pathology Report

Pathology Report

Clinical Data: Right breast LOQ, BIRADs 4a.

Nature of Specimen: Tru-cut biopsy, collected on 18/05/2026, at 1:30 pm, Cold ischemia time: 20 seconds.

Gross Examination: Fragmented grey, white tissue cores, ranging in length between 0.2 cm and 1.0 cm, totally submitted.

Microscopic Examination:

Histopathological examination reveals tissue cores with fibro adenosis. No atypia or malignancy in submitted tissue cores.

Diagnosis:
Right breast LOQ mass, Tru-cut biopsy:
Findings are consistent with fibroadenosis. No atypia and no malignancy.

Signature
Dr. Walaa Ibrahim Ghonaim.

Patient's Name:	NAGLAA MOHAMMED ALI

Referred by:	Prof.Dr.
Hospital:	Goustave Roussey International Egypt

BILATERAL MAMMOGRAM AND BREAST ULTRASONOGRAPHY REVEALED:

Indication: Follow up after bilateral conservative surgery.

- **Breast density:** Scattered densities of glandular tissue … *Matching ACR B.*
- **Thickened right breast skin .**
- No detected suspicious mass density, architectural distortion or pathological micro-calcification in both breasts.
- Normal skin and nipple on both breasts.

By complementary bilateral breast ultrasound:

- Homogeneous (predominantly glandular) parenchymal echo-texture of both breasts.
- **Bilateral subcentimteric cysts are seen.**
- **Heterogeneous dense breast tissue is seen in the right breast lower outer quadrant.**
- *Clear operative bed on both sides .*
- No detected suspicious solid or cystic masses in both breasts..
- **No detected significant axillary lymph nodes.**

CONCLUSION:

- ***Post conservative surgery changes of the right breast with heterogeneous dense breast in the lower outer quadrant for post contrast study (BIRADS 4A Category).***
- ***Left breast : post conservative changes with Early left fibrocystic changes (BIRADS 2 Category).***

MUCH OBLIGED

Prof.DR.MONA ZAKY, MD.

Pathology Report

Clinical Data
Right breast mass

Nature of specimen
Slide revision

Gross examination
Two blocks (6935/23)(6579/23)
Multiple grayish white tissue cores up to 1 cm, totally submitted.
IHC technique: Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9).

Microscopic examination
1)Eamination of block labelled by (6935/23)
* Histological type: Invasive duct carcinoma
* Grade (differentiation +nuclear pleomorphism+ mitosis): (3+2+2) Grade II
* DCIS: Focal
* Angioinvasion: Couldn't be detected in the received biopsy
*Perineural invasion: No
* IPT (Positive control showed appropriate reactivity) :
* ER: Moderate nuclear reaction in 60 tumor cells (Allred score 6/8)
* PR: Moderate nuclear reaction in 1%tumor cells (Allred score 3/8)
* HER2:Strong complete membrane reaction in >10 of tumor cells (score 3+)
2)
Eamination of block labelled by (6579/23)
* Histological type: Invasive duct carcinoma

Pathology Report

* Grade (differentiation +nuclear pleomorphism+ mitosis): (3+2+2) Grade II
* DCIS: No
* Angioinvasion: Couldn't be detected in the received biopsy
*Perineural invasion: No
• IPT (Positive control showed appropriate reactivity) :
* ER:Strong nuclear reaction in tumor cells (Allred score 8/8)
* PR: Strong nuclear reaction in tumor cells (Allred score 8/8)
* HER2: Faint incomplete membrane reaction in >10% of tumor cells (score 1+)
Cytology: Smears showed many RBCS scattered lymphocytes,histeocytes groups of atypical epithelial cells

Diagnosis
Right breast mass, slide revision
1)Exanination of block labelled by (6935/23)
Invasive duct carcinoma, Grade II with focal DCIS
IPT:
* ER: Positive (score 6/8).
* PR:Positive (score 3/8).
* HER2:Positive (score 3+).
2) Examination of block labelled by (6579/23)
Invasive duct carcinoma, Grade II
IPT:
* ER: Positive (score 8/8).
* PR: Positive(score 8/8).
* HER2: Low (score 1+).
Cytology: Smears showed many RBCS scattered lymphocytes,histeocytes groups of atypical epithelial cells

Pathology Report

Clinical Data :
Bilateral breast cancer post NACT .

Nature of the specimen :
Bilateral wide local excision and sentenil lymph node biopsy specimens collected at 17/4/2024.

Gross Examination:
Four specimens were received:
-Right wide local excision specimen measured 6x6x3 cm , with no covering skin .
• Tumor extent : An ill defined rubbery greyish white tumor bed site (wired).
• Size: 4.5x4x2 cm
• Distance from margins: 1 cm away from lateral and superior , 0.5 cm from medial margin ,0.3 cm from inferior , 0.4 cm from superficial margin and 0.6 cm from deep margin .
-Right sentenil lymph node biopsy specimen: Two fibrofatty tissue peices measured 5x3x1 cm and 6x2.5x1 cm entangling 4 nodules measured up to 2.5x2x1 cm.
-Left wide local excision specimen measured 5x4.5x1 cm , with no covering skin .
• Tumor extent : An ill defined rubbery greyish white tumor bed site (wired).
• Size: 3x2x1.5 cm
• Distance from margins: 1 cm away from lateral margin , 0.7 cm from deep magin and 0.5 cm from superior margin , medial margin , inferior and superficial margin .
-Left sentenil lymph node biopsy specimen: Two fibrofatty tissue peices measured 5x2.5x2 cm and 2.5x2.5x1 cm entangling 3 nodules measured up to 3.5x1.5x0.7 cm.
• Frozen section:
Right breast:
-Free margins
-Free SLNs(0/4).
Left breast:

Pathology Report

-Free margins
-Free SLNs(0/3).

Microscopic examination:
Right breast:
• Ductal carcinoma insitu , low gade.
• Total tumor regression in a previously diagnosed carcinoma.
• Lymph node involvement: Free (0/4).
• Resection Margins: Free resected margins .
• Histologic response to therapy: Pathologic complete response .
Left breast:
• Total tumor regression in a previously diagnosed carcinoma.
• Lymph node involvement: Free (0/3).
• Resection Margins: Free resected margins .
• Histologic response to therapy: Pathologic complete response .

Diagnosis:
Right breast cancer post NACT , wide local excision and sentenil lymph node biopsy specimens :
-Ductal carcinoma insitu , low grade.
-Total tumor regression in a previously diagnosed invasive carcinoma.
-Free resected margins.
-Free lymph nodes: (0/4).
-Pathologic complete response..
-Stage : ypTis , ypN0.

Report: - all studies

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN AND PELVIS

1-CHEST

- Left breast upper aspect heterogeneously enhancing two masses are seen; he largest seen at the inner aspect measuring 14 x 13 mm in axial dimensions.
- Heterogeneously enhancing right breast parenchyma.
- Enlarged left axillary (level I &II) lymph nodes the largest is seen measuring about 11 x 15 mm at level I.
- Pathologically enlarged right axillary (level I & II) lymph nodes the largest is seen measuring about 18 x 14 mm at level I.
- No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No CT evidence of pathologically enlarged hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape.
- No pericardial effusion detected.
- Diffuse right thyroid enlargement is seen with heterogenous CT texture.

2- ABDOMEN AND PELVIS

- The liver is mildly enlarged with homogenous CT texture. No focal lesions or intra-hepatic or extra-hepatic biliary radicles dilatation..
- Patent homogenously enhancing portal vein and is main branches as well as its main tributaries.
- Normal appearance of the pancreas, spleen, kidneys, adrenals, aorta, I.V.C and the pelvic organs.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- No pathologically enlarged abdominal or rest of pelvic lymph nodes.
- No abdominal or pelvic collections.

[[DOCTYPE:CT_SCAN]]

- IUD is seen.
- The revised bone window revealed:

1. Sternal, D2 and L5 sclerotic foci likely bone island.
2. No CT evidence of vertebral collapse or extra-osseous soft tissue component.

Opinion:

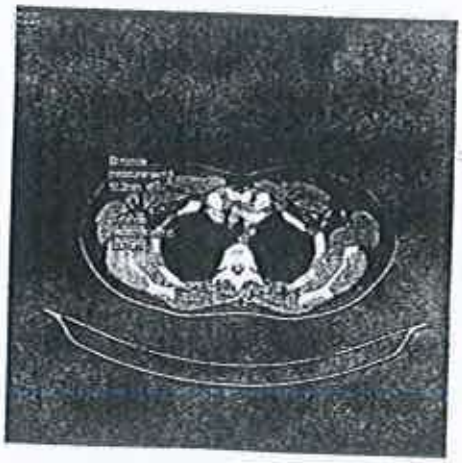

Known case of breast cancer showing:

- *Heterogeneously enhancing right breast parenchyma with pathologically enlarged right axillary lymph nodes.*
- *Left breast two enhancing breast lesions and prominent axillary lymph nodes for correlation with sonomamography findings.*
- *No pulmonary or hepatic metastatic deposits.*

========== REPORT TEXT ==========
Nuclear Medicine Unit ???? ???? ??????

99mTc-MDP BONE SCAN

Brief history; 50 years old female patient diagnosed with managed breast cancer.
Desired Information: - skeletal survey.
Technique:
Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

Report:

" No hot spot that account for osseous deposits could be detected allover the surveyed skeleton.
" Spondylo-degenerative changes are seen over dorso-lumbar vertebrae.
" Pronounced osteoarthrosis noted over both knee joints.
" Both kidneys are normally visualized.

Conclusion:

Negative study for the detection of any definite metastatic osseous deposits.

Thanks for reference
