| | | | |
|---|---|---|---|
| **تاريخ وساعة الدخول :** | | **تاريخ وساعة الخروج :** | |

**وبعد الكشف والفحوصات والمتابعة وجد انه**

**The patient is a 41-year-old with a history of right breast cancer, clinical stage ct3 n2 m0, ERPR3/8 HER2 3+. The tumor was treated with right breast conserving surgery and axillary node dissection (CY N0/17). Post-operative radiation therapy to the breast was delivered, followed by adjuvant tamoxifen for 15 cycles of the PHESGO regimen and tamoxifen. At the time of the first note, the patient had completed 57% of the planned adjuvant therapy.**

**The second note indicates that the patient is scheduled for cycle 16 of PHESGO and tamoxifen. Transvaginal ultrasound shows an endometrial thickness of 4 mm.**

**The third note documents that the patient is to receive cycle 17 of PHESGO with tamoxifen 20 mg daily (1 × 1 × 90) and supportive care (1 × 1 × 90).**

**The most recent note states that the patient will continue tamoxifen in conjunction with Zoladex, with the patient reporting a history of bone pain.**

## IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast 11 O'clock mass.
Nature of Specimen: Tru-cut biopsy, collected at 15/8/2024.
Technique:
- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:
* IPT (Positive control showed appropriate reactivity):
- ER: Faint nuclear reaction in 5% of tumor cells (score 3/8).
- PR: Faint nuclear reaction in 3% of tumor cells (score 3/8).
- Her2: Strong complete membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 70% nuclear reaction of tumor cells.

Conclusion:
Right breast mass, Tru-cut biopsy:
Invasive duct carcinoma, Grade III.
IPT:
- ER: Positive (score 3/8).
- PR: Positive (score 3/8).
- Her2: Positive (score 3+).
- Ki67: Positive in 70% of tumor cells.

* Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between

## IMMUNOHISTOCHEMISTRY REPORT

67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, week, 2, intermediate; and 3, strong). Total score from 0 to 8.

* Scoring system: "Her2"

Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013.IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10%of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

# Pathology Report

Clinical Data:
Right breast mass post NACT.

Nature Specimen:
Right breast conservative surgery and axillary clearance collected at 18/1/2025.

Gross Examination:
1) Right breast conservative surgery specimen measured 5x4.5x2 cm with no covering skin.
* Tumor extent: A greyish white tumor bed site (wired).
* Size: 2x1.8x1.5 cm.
* Distance from margins: 0.2 cm away from nearest lateral margin,2 cm from medial ,0.5 cm from superior, 0.3 cm from inferior, 0.8 cm from superficial and 0.3cm from deep margin.
2) Extra lateral margin: A fibrofatty tissue piece measured 2.5x2x1 cm
3) Axillary clearance: A fibrofatty tissue piece measured 4x3x1 cm entangling 17 nodules up to 2x1 cm.
* Frozen section:
- Free margins.

Microscopic Examination:
• Total tumor regression in a previously diagnosed carcinoma.
• Lymph node involvement: Free (0/17).
• Resection Margins: Free resected margins.
• Histologic response to therapy: Pathologic complete response .

Diagnosis:
Right breast mass post NACT, breast conservative surgery and axillary clearance:
- Total tumor regression in a previously diagnosed carcinoma.

**DIGITALIZED LOW DOSE SOFT TISSUE MAMMOGRAPHY WITH COMPLEMENTARY BREAST US EXAMINATION OF BOTH BREASTS REVEALED:**

- ACR B: Mixed fibro-fatty-glandular breast parenchyma.
- An irregular abnormal density seen at the upper mid aspect of the right breast corresponding by US to two adjacent well defined globular shaped heterogeneous hypoechoic masses are seen at 12 and 11 o'clock , they measure about 24x25 mm and 29x 15 mm respectively . surrounded by faint echogenic halo and causing faint posterior shadowing. They have a 2 cm distance from the nipple
- No pathological microcalcification clusters.
- No left breast solid or cystic lesions.
- Normal central ducts system.
- Normal skin thickness and contour as well as nipple areola complexes.
- Few Right axillary enlarged lymph nodes showing effaced fatty hila with cortical thickening largest measures about 28x14 mm .

Opinion:

✓ **Right breast malignant looking lesions as described with ipsilateral axillary lymphadenopathy (BIRADS IVc ); for further assessment with Dynamic MRI and pathological correlation.**

*Much Obliged;*
**Dr. Mahmoud abdelmohsen .FEBR**

---

*BIRADS scoring is the breast imaging and reporting data system for classifying the radiological diagnosis of breast lesions:*

*BIRADS 0 : Needs further investigations.*
*BIRADS 1: Normal findings.*
*BIRADS 2: Benign.*
*BIRADS 3: Probably benign.*
*BIRADS 4: Probably malignant.*
*BIRADS 5: Malignant.*
*BIRADS 6: Proven pathologically malignant*

## FOLLOW UP BILATERAL BREAST Mammography and ULTRASOUND

**INDICATION:**

- Follow up post chemotherapy for Right breast multi-focal neoplastic process.
- In correlation to the previous study of 7/8/2024.

**REPORT:**

***Regressive course as regards the size of the previously detected:***

- Scattered fibroglandular densities (ACR B)
- Right breast UOQ middle third distortion, with clip seen at the periphry
- BY US:
- Right breast UOQ (11-12o'clock location) fibrotic band measuring about 19 x8 mm, (*was seen as two spiculated hypoechoic masses , measured 24 x25 mm and 29x15 mm in the previous study).
- The lesion is about 9 mm away from the skin and 36 mm away from he nipple in the current study.
- Right axillary LNs with diffuse cortical thickening 4mm compared to 28 x14 mm in the previous study.
- No supra clavicular LNs seen

No Left breast suspicious mass lesions.

- Normal skin thickness and contour.
- Normal nipple areola complexes.
- left nonspecific axillary lymph nodes.

**OPINION:**

- Follow up post chemotherapy for a case of Right breast malignancy, showing partial therapeutic response, with regressive course as regards the loco-regional and nodal neoplastic burden since the last study, with residual as described ( BIRADS VI ).

## 99MTC-MDP BONE SCAN

**Desired Information: -**
skeletal survey.

**Technique:**
Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

**Report:**

No hot spot that account for osseous deposits could be detected allover the surveyed skeleton.
Degenerative changes are seen over dorso-lumbar vertebrae , more advanced at mid dorsal.
Arthritic changes are seen over both knees.
Both kidneys are normally visualized.

**Conclusion:**

***No definite evidence of metastatic osseous deposits ,***

***however follow up bone scan is recommended.***

Dear. Prof. Dr

## I-Post Contrast CT Scan Of the Chest Revealed.

- A 6cm necrotic right breast soft tissue mass lesion is noted (breast carcinoma)
- Enlarged right axillary metastatic lymph nodes , largest reaching 2.2cm
- Bilateral predominantly basal and Subpleural veiling ( likely representing gravitational haze
- Otherwise clear both lungs showing no definite nodules , masses or cavitary lesions
- Clear both costo-phrenic recesses
- Normal cardiac size with no pericardial effusion
- No evidence of hilar mediastinal lymphadenopathy

## II-Post Contrast CT Scan Of the Abdomen & Pelvis Revealed.

- Average sized liver showing homogenous texture and regular smooth outlines. No definite focal lesions or dilated IHBRs.
- Patent main portal vein and its central branches .
- Average sized spleen showing no definite focal lesions .
- Normal CT appearance of the pancreas, adrenal glands , kidneys , aorta and IVC
- Intact pelvic organs .
- No retro-crural or retro-peritoneal lymph nodes are noted
- No ascites.

**Conclusion :-**

- Normal post-contrast CT examination of the abdomen and pelvis
