Detailed Medical Report

السيد	

تحية طيبة وبعد,,

إيماء للطلب المقدم من		**بشأن تقرير طبي للمريض**	
بقسم:		**رقم طبي:**	

ننشرف بأن نوضح فيما يلي تقريرا عن حالتها

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انها

The patient was diagnosed with left-sided breast cancer and received neoadjuvant chemotherapy consisting of doxorubicin and cyclophosphamide for three cycles (AC × 3) followed by docetaxel for three cycles (TXT × 3) as the first anthracycline-based regimen, with an echocardiogram showing an ejection fraction of 66 %.

Pathology confirmed a left-breast invasive ductal carcinoma, clinical stage T2 N0 M0, grade 2, estrogen-receptor score 8/8, progesterone-receptor score 8/8, HER2-negative, Ki-67 5 %. Contrast-enhanced spectral mammography demonstrated both a mass and non-mass enhancement in the upper outer quadrant and upper inner quadrant. The patient experienced grade 2 vomiting during the first cycle of AC.

On the day of presentation the patient received cycle 1 of docetaxel at a dose of 75 mg/m², with supportive care and methabio-gen tablets pending laboratory results.

The patient returned for administration of cycle 1 docetaxel 75 mg/m², again with supportive care and continuation of methabio-gen tablets.

At the most recent visit the patient's weight was 93 kg and height 163 cm; physical examination revealed no palpable breast masses. The patient received cycle 2 of taxotere (docetaxel) at a dose of 150 mg. The patient has completed 2 cycles of taxotere.

Patient Name: Wafaa Abdel Hameed Zaky Al Garhy	Date : 24/09/2025
Exam : ultrasound BREAST (BOTH SIDE)	Age : 47 Year(s)
Medical ID: 7916	Pat. ID: 121703

BILATERAL MAMMOGRAM AND BREAST ULTRASONOGRAPHY REVEALED:

- **Breast density:** Scattered areas of glandular tissue....Matching ACR b.
- *Focal asymmetry and distortion with obscured margin mass lesion is seen in the left UOQ..*
- No detected suspicious mass density, architectural distortion or pathological micro-calcification in the right breast,
- Normal skin and nipple on both sides.

By complementary breast ultrasound:

Left breast:

- Homogenous glandular echo-texture.
- *Corresponding to the mammographic density seen in the left upper outer quadrant, there is an irregular shaped mass is seen at 1 o'clock zone 2 measuring (21 X 16 mm) with another area of parenchymal distortion is seen at 12-1 o'clock position zone 1& 2 .*
- *Normal left skin.*
- Normal left skin and nipple.
- Non specific axillary LNs.

Right breast:

- Homogenous glandular echo-texture.
- No detected suspicious solid or cystic masses.Normal right skin and nipple.
- No detected significant right axillary LNs.

CONCLUSION:

- *Left breast: Left UOQ suspicious mass with another area of distortion ?multifocal affection for post contrast study .... BIRADS 4b Category.*
- *Right breast: Early fibrocystic changes .....BI-RADS 2 Category.*

Much Obliged

Pathology Report

Clinical Data: Left breast suspicious mass, BIRADs 4b.
Nature of Specimen: Tru-cut biopsy, collected on 05/10/2025.

Gross Examination:
- Three grey white tissue cores, the longest was 1.5 cm. Totally submitted.

Technique:
- Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5) & Ki67 clone (30-9).

Microscopic Examination:
- Histological type: Invasive duct carcinoma.
- Grade 2 (differentiation 2, nuclear pleomorphism 2, mitosis 2).
- DCIS: 20% Intermediate grade ductal carcinoma Insitu (Cribriform & clinging patterns).
- AngioInvasion: Present.
- Perineural invasion: Present.

- IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear reaction in 95% of tumor cells (score 8/8).
- PR: Strong nuclear reaction in 2% of tumor cells (score 5/8).
- Her2: Faint incomplete membrane reaction in more than 10% of tumor cells (score 1+).
- KI67%: 5%.

Diagnosis:
Left breast mass, Tru-cut biopsy:
- Invasive duct carcinoma, Grade 2, with 20% intermediat grade ductal carcinoma insitu (Clinging & cribriform patterns).
IPT:

Pathology Report

- ER: Positive (score 8/8).
- PR: Positive (score 5/8).
- Her2: Low (score 1+).
- Ki67%: 5%.

* Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66%
and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, week, 2, intermediate; and 3, strong). Total score from 0 to 8.
* Scoring system: "Her2"
Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013.IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within > 10% of the invasive tumor cells.
IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within >10% of
the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is complete, intense > 10% of tumor cells.

Patient Name: Wafaa Abdel Hameed Zaky Al Garhy	Date : 21/10/2025
Exam : CT CAP+C (CT Chest Abd. Pelvis)	Age : 47 Year(s)
Medical ID: 2952/2025	Pat. ID: 121703

MULTISCLICE POST CONTRAST C.T. EXAMINATION OF THE CHEST, ABDOMEN AND PELVIS

REVEALED:

Known case of CA breast.

I- CHEST:

- No pulmonary nodules, masses or cavitary lesions.
- No consolidation or collapse.
- No hilar or mediastinal masses or lymph node enlargement.
- No pleural or pericardial collection.
- Normal CT appearance of the heart and great vessels.

II- ABDOMEN AND PELVIS:

- Average sized liver showing homogenous parenchymal attenuation. No hepatic focal lesion or dilated biliary radicles.
- Both kidneys are normal site, average sized and showing smooth regular cortical outline and preserved parenchymal thickness and function. No stones or back pressure changes.
- Normal C.T appearance of the spleen, pancreas, suprarenal glands, aorta and IVC.
- The urinary bladder shows no evidence of gross masses or diverticulae or stones.
- Normal appearance of the pelvic organs with no pelvic masses or collections.
- No abdominal or pelvic lymphadenopathy.
- No ascites.
- No worrisome lytic or sclerotic bone lesions.

Opinion:

❖ Known case of CA breast showing no CT evidence of metastatic disease.
