Pat. Age 57 Year(s)	Pat. Sex F
Study ID:	Study End Date: 05/01/2026 17:29:31
Procedure Name: Complementary echocardiogram	Ref. Phy. -- --

ECHOCARDIOGRAPHY

M.MODE MEASUREMENTS

LVEDD	5.17	N (3.5-5.6 cm)	Aorta	2.52	N (Up to3.7cm)
LVESD	3.57		LA	4.04	N(Up to 4cm)
IVS	0.83	N(0.6-1.1 cm)	RV		N(.7-2.3 cm)
PW	0.74	N(0.6-1.1 cm)	FS	31%	
			EF	58%	N (=50%)

COMMENT:

- Normal left ventricular internal dimensions with Good systolic function .
- No RSWMA at rest.
- Normal LV filling pattern .
- Upper normal LA internal dimension .
- Mild mitral valve regurge .
- Normal aortic valve with good excursion, no gradient. Normal flow.
- Mild to moderate tricuspid valve regurge with PG 29 mmHg .
- Normal pulmonary valve thickness and excursion. No regurgitation
- Normal right ventricle dimension and contractility.
- No pericardial effusion.
- No intracardiac masses or thrombi by TTE at time of study.

Conclusion:

- *Mild MR , Mild to moderate TR .*

Detailed Medical Report

السيد

تحية طيبة وبعد,,

إيماء للطلب المقدم من		بشأن تقرير طبي للمريض	
بقسم:		رقم طبي:	

نشرف بأن نوضح فيما يلي تقريرا عن حالته

تاريخ وساعة الدخول :		تاريخ وساعة الخروج :	

وبعد الكشف والفحوصات والمتابعة وجد انه

The patient received Cycle 4 of Herceptin subcutaneous (SC) with adjustment plus Femara; an echocardiogram showed an ejection fraction of 58 %, and a breast ultrasound on 5 January demonstrated a postoperative mastectomy bed seroma. The patient subsequently proceeded to Cycle 6 of Herceptin SC as documented by pharmacy.

During a clinical pharmacy visit, the patient was noted to be on Cycle 5 of Herceptin SC with Femara, with an echocardiogram on 7 April 2026 showing an ejection fraction of 65 %. The plan included Femara 1 mg daily and supportive medications for Cycles 6 and 7 as ordered by pharmacy.

A pharmacy intervention clarified that the patient was prescribed Arimidex rather than Femara.

The pharmacy record indicated that the patient received Cycle 6 of Herceptin SC together with Arimidex.

The patient was administered Cycle 8 of Herceptin SC; the mastectomy bed seroma persisted with traumatic fat necrosis noted, and the patient continued Arimidex. The patient has completed eight cycles of Herceptin subcutaneous.

Clinical Diagnosis: Left Breast Mass
Nature of the specimen: Left MRM, Axillary Lymph Nodes And Apical Lymph Nodes

Pathology Report

Gross Picture

Two designated specimens were received as:
A) MRM specimen measured 22x20x8 cm covered by skin ellipse measured 27x21 cm with attached axilla measured 15x10 cm including nipple and areola. Serialling revealed an ill-defined firm greyish white mass measured 4.3x3.8x2.5 cm, locating 1/2 cm from deep margin and 1.5 cm from the skin. The dissection of axilla revealed (13) nodules measured up to 3x2.5 cm.
B) Apical lymph node: Multiple irregular fibrofatty tissue pieces collectively measured 2.5x2.5 cm entangling (11) nodules measured up to 1x1 cm.

Microscopic Picture

(A) Sections examined from breast masse revealed malignant neoplastic growth formed of tubules and sheets of malignant ductal cells with moderate degree of pleomorphism with surrounding desmoplastic stroma. No Ductal insitu component seen. Lymphovascular emboli seen. No evident Perineural invasion. Sections examined from nipple, areola and all surgical margins were free. One out of 13 dissected axillary lymph nodes was positive for tumor deposits (1/13) without extra capsular extension.
(B) Apical lymph nodes: Sections examined from all dissected lymph nodes were free. (0/11)

Diagnosis

Left Breast Mass, Left MRM, Axillary Lymph Nodes And Apical Lymph Nodes:
A) Infiltrating Duct Carcinoma, Grade II.
No Intraductal Components.
No Perineural Invasion
Lymphovascular Emboli Present
Free Nipple And Areola.
Free Surgical Margins
Axillary Lymph Nodes: Positive (1/13), No Capsular Infiltration.
B) Apical Lymph Nodes: Negative (0/11).
Tumor Stage: pT2N1A.

Pathology Report

Clinical Data:
A case of left breast mass with axillary lymph node was diagnosed elsewhere as invasive duct carcinoma with lymph node macrometastais (Her2 result was equivocal in one lab & was positive in other lab).

Nature of Specimen:
Referred blocks & slides (Tru-cut biopsies), Requested SISH.

Gross Examination:
- Two referred blocks labelled as (25010524). Together with seven referred slides including 4 immunostained slides for (ER, PR, HER2, Ki 67) and three H&E stained slides sublabelled as (1, 2 & 5).

Technique:
- Sections prepared from paraffin blocks for immune-staining using Bench Mark ULTRA system for:
- SISH.

* IPT:
- SISH: Amplified.
'Average Her2 copy No.: (7.85), Her2/CEP17 ratio: (2.8)).

Diagnosis:
Left breast mass with axillary lymph node, Referred blocks (Tru-cut biopsies), Requested SISH):
SISH: Amplified, Group I.
Average Her2 copy No.: (7.85), Her2/CEP17 ratio: (2.8)).

Pathology Report

e ratio is calculated and the results is interpreted as:
Group I (Positive): HER2/CEP17 ratio is more than 2 & Average HER2 copy number/ cell is more than 4.
• Group II (Negative): HER2/CEP17 ratio is more than 2 & Average HER2 copy number/ cell is less than 4. (Recounting give the same result).
• Group III (Positive): HER2/CEP17 ratio is less than 2 & Average HER2 copy number/ cell is more than 6 (Recounting give the same result).
• Group IV (Negative): HER2/CEP17 ratio is less than 2 & Average HER2 copy number/ cell is more than 4 but less than 6. (Recounting give the same result).
• Group V (Negative): HER2/CEP17 ratio is less than 2 & Average HER2 copy number/ cell is less than 4.

Whole Body PET/CT Examination

History and Clinical Data:-

Patient data:-

Female patient, 57 years old, Weight: 132 Kg, Height: 172 cm, Blood Glucose level: 84 mg/dl

Radiopharmaceutical:-

F-18-FDG 11 mCi injected I.V.

Clinical background:-

- A case of left breast cancer.

Purpose of the study:-

- Initial assessment.

Technique:-

- Approximately one hour following the IV injection of the radio-pharmaceutical, a total body PET-CT was acquired from the knees to the skull with arms extended above the head. CT was acquired for the purpose of anatomic localization, attenuation correction and diagnostic purpose.
- Data was processed and displayed according to departmental protocol.
- Adequate liver and brain FDG uptake with adequately co-registered PET and CT images.
- Liver showed average SUV ~2.3.
- Mediastinal blood pool average SUV ~1.59.

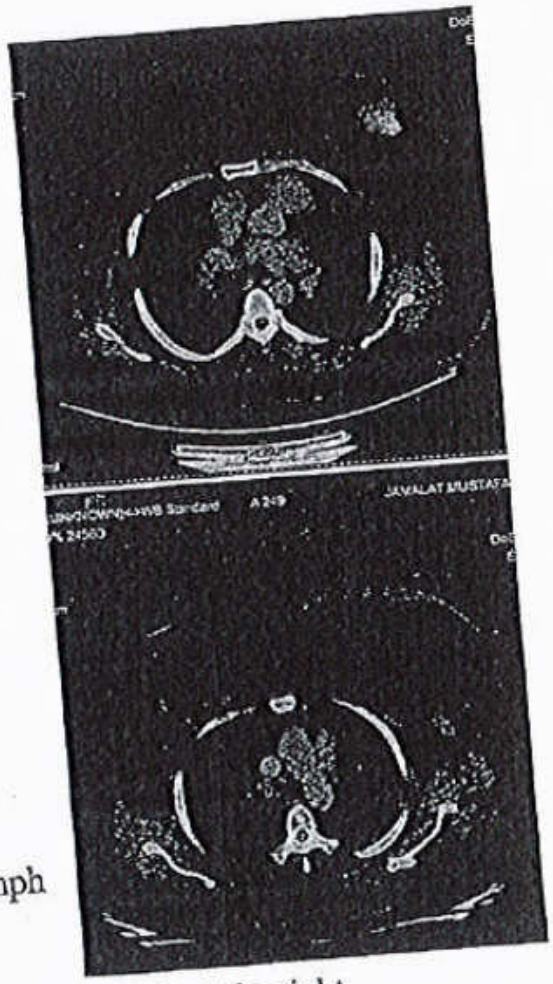

Patient Name:	Jamalat Mustafa Mohammed	**Patient ID:**	593029
Prof. Dr:	Mohammed Salah Hassan	**Exam Date:**	29/4/2025
Accession:	250427336		

Findings:-

I) Breasts and Axillary regions:-

- Metabolically active left breast soft tissue mass is noted at its lower outer quadrant measuring 4.2 x 4.7 x 4.4 cm.
- Associated with overlying metabolically inactive (non FDG avid) skin thickening up to 1 cm with max SUV ~ 6.45.
- Metabolically active few enlarged left axillary lymph nodes are noted measuring 2.8 cm with max SUV ~ 3.50.
- No metabolically active right breast focal lesions
- No metabolically active right axillary lymph nodes
- Metabolically inactive (non FDG avid) few subcentimetric right axillary lymph nodes (likely inflammatory)

II) Head and Neck:-

- Scanned brain sections show uniform bio-tracer distribution in the cerebral and cerebellar hemispheres.
- No metabolically active (FDG avid) masses are noted.

CT Scan
[[DOCTYPE CT_SCAN]]

Patient Name:	Jamalat Mustafa Mohammed	Patient ID:	593029
Prof. Dr:	Mohammed Salah Hassan	Exam Date:	29/4/2025
Accession:	250427336		

- No metabolically active (FDG avid) cervical lymph-nodes are noted.
- Metabolically inactive (non FDG avid) few subcentimetric bilateral cervical level II lymph nodes; likely inflammatory
- Bilateral maxillary sinusitis.

III) Chest:-

- No metabolically active (FDG avid) pulmonary nodules or masses are noted.
- Metabolically inactive (non FDG avid) middle lobe thick atelectatic bands (likely post inflammatory).
- No metabolically active (FDG avid) pleural effusion is noted.
- No FDG avid (metabolically active) mediastinal lymph-nodes are noted.

IV) Abdomen and pelvis:-

- Average sized liver showing no metabolically active (FDG avid) focal lesions.
- Average sized spleen showing no metabolically active (FDG avid) focal lesions.
- No metabolically active (FDG avid) porta hepatis, mesenteric, retroperitoneal or pelvic lymph-nodes are noted.
- No ascites.
- Left renal non-obstructive lower calyceal stone.

Patient Name:	Jamalat Mustafa Mohammed	**Patient ID:**	593029
Prof. Dr:	Mohammed Salah Hassan	**Exam Date:**	29/4/2025
Accession:	250427336		

- The rest of the abdominal and pelvic organs show normal PET/CT appearance with no related focal lesions or abnormal FDG uptake.

V) Axial and scanned Appendicular Skeleton:-

- No (FDG avid) metabolically active osteolytic or osteosclerotic lesions are noted.

Conclusion:

A known case of left breast cancer showing:

- ***Metabolically active left breast neoplastic mass as described.***
- ***Metabolically active few metastatic left axillary lymph nodes.***
- ***No metabolically active distant metastatic deposits.***

Thank You for Your reference
