ننشرف بأن نوضح فيما يلي تقريرا عن حالتها

تاريخ وساعة الدخول :		**تاريخ وساعة الخروج :**	

وبعد الكشف والفحوصات والمتابعة وجد انها

The patient is a 42-year-old with triple-positive breast cancer (TPBC) undergoing treatment with left mastectomy and reconstruction (LT MRM) performed in August 2025. The current systemic regimen includes KADCYLA (ado-trastuzumab emtansine) combined with ARAMIDEX (anastrozole) and ZOLADEX (goserelin), with a port placed for infusion. An echocardiogram performed on 25-12-2025 showed a left ventricular ejection fraction of 67 %. The patient received KADCYLA cycles C6, C7, and C8 as documented.

During a clinical pharmacy visit on 28-02-2026, the patient was noted to be receiving cycle C7 of KADCYLA plus ARAMIDEX, with an echocardiogram EF of 67 %.

On 21-03-2026, the clinical pharmacy note confirmed continuation of cycle C8 of KADCYLA and ARAMIDEX, with the same EF of 67 % and laboratory work reviewed and accepted.

On 11-04-2026, the oncology team recorded that cycle C7 was not administered due to a pharmacy issue ("qarar"). The plan was to revise the pharmacy order and proceed with cycle C8 of KADCYLA after labs, together with ARAMIDEX, supportive care, and ZOLADEX. Dental assessment for ZOMETA was pending.

Later on 11-04-2026, the pharmacy noted elevated liver enzymes (ALT 55 U/L, AST 73 U/L) and recommended liver support.

On 02-05-2026, the oncology note detailed the patient's weight (96 kg), diabetes, left-sided breast cancer (clinical stage T4 d, N3, M0, IDC grade 2, ER 8/8, PR 8/8, HER2 3+, Ki-67 40 %). The patient had received left MRM on 19-08-2025, with a port placed, and was on ZOLADEX and ARAMIDEX. Severe constipation, headache, and right calf muscle pain prompted a lower-limb venous duplex (negative) and brain MRI (negative). Laxatives were prescribed, and the next appointment was scheduled for cycle C9 of KADCYLA 260 mg, ARAMIDEX, and ZOLADEX, with a due date of 07-04-2026. Liver enzymes were noted to be two-fold elevated, prompting liver support.

On 23-05-2026, constipation resolved spontaneously, the lower-limb venous duplex remained negative, and brain MRI showed no space-occupying lesions. KADCYLA became available from pharmacy for continuation with ARAMIDEX and supportive care; dental assessment for ZOMETA remained pending.

On 03-06-2026, the patient was diagnosed with left temporal-lobe epilepsy; EEG performed on 05-06-2026 confirmed the diagnosis. Brain MRI remained free of lesions, and the ejection fraction was 70 % on 29-04-2026. The plan included cycle C10 of KADCYLA 260 mg, ZOMETA, ARAMIDEX, and continued liver support for three-fold elevated liver enzymes, with an abdominal ultrasound ordered.

تحريرا في ,

التاريخ :	18-09-2026	**الوقت :**	

الطبيب المعالج : dina makram

يعتمد ,

On 27-06-2026, the plan for cycle C11 of KADCYLA plus ARAMIDEX was outlined, pending laboratory results and liver support. Mildly elevated liver enzymes persisted. The patient continued treatment for temporal-lobe epilepsy with no contraindications to therapy. ZOLADEX was due on 04-07-2026.

On 19-07-2026, the patient was free of symptoms and scheduled for cycle C12 of KADCYLA 260 mg, ARAMIDEX, liver support, and ZOLADEX due on 26-09-2026.

On 16-08-2026, the current regimen includes ARAMIDEX with supportive care for three months, ZOLADEX due on 26-09-2026, and the next follow-up visit is planned for 08-11-2026.

Pathology Report

Clinical Data: Left breast cancer post NACT .
Nature of the specimen: Left breast & Left axilla (MRM)

Gross Examination:
- Procedure: Left MRM.

measured 25x20x8 cm with covering skin ellipse measured 18x15 cm .
- Tumor extent : A greyish white tumour bed site
- Size: 9 x7 x3 cm .
- Skin involvement: Nipple & areola were unremarkable grossly .
- Distance from margins: 2 cm away from deep margin .

Block designation :
1:9 TBS
10.Nipple
11.Deep margin
12:15 ALNDS
Grossing by Dr.Heba El-Shafeey .
- •Microscopic examination:
- Histological type: Invasive duct carcinoma (Actual tumour size 1x1 cm , Cellularity 35%) with medullary features.
- Grade (differentiation+ nuclear pleomorphism + mitosis): G 3(3+3+2)
- Ductal carcinoma in situ : Absent
- Skin involvement: Free nipple and areola
- Lymph node involvement: Positive L.Ns (1/10)
- Resection Margins: Free deep margin.
- Histologic response to therapy: Pathologic partial response

Diagnosis:
Left MRM (post NACT) :

Pathology Report

- PR: Positive (score 8/8).
- Her2: Positive (score 3+).
- Ki67: Positive in 40% of tumor cells.

* Scoring system: "ER, PR"
ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, week, 2, intermediate; and 3, strong). Total score from 0 to 8.
* Scoring system: "Her2"
Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013.IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10%of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Pathology Report

Clinical Data: Left breast malignant looking mass.
Nature of Specimen: Tru-cut biopsy, collected at 20/2/2025.

Gross Examination:
- Three grayish white tissue cores up to 1.5 cm, totally submitted.
- Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for ER, PR, Her2, ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Microscopic Examination:
* Histological type: Invasive duct carcinoma.
* Grade (differentiation+ nuclear pleomorphism+ mitosis): (3+2+1) Grade II.
* Ductal carcinoma in situ: Focally positive.
* Perineural invasion: Negative.
* Angioinvasion: Negative.
* Microcalcifications: Positive.

* IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear reaction in 90% of tumor cells (score 8/8).
- PR: Strong nuclear reaction in 80% of tumor cells (score 8/8).
- Her2: Strong membrane reaction in >10% of tumor cells (score 3+).
- Ki67: 40% nuclear reaction of tumor cells.

Diagnosis:
Left breast malignant looking mass, Tru-cut biopsy:
Invasive duct carcinoma, Grade II, with focal DCIS and microcalification.
IPT:
- ER: Positive (score 8/8).

Patient Name: Sanaa Shaaban Mohamed Ali	Date : 08/03/2025
Exam : C.T CHEST WITH CONTRAST	Age : 41 Year(s)
Medical ID: 754/2025	Pat. ID: 97818

POST CONTRAST MULTI-SLICE CT SCAN OF THE NECK, CHEST, ABDOMEN, AND PELVIS: -

I Neck

- Bilateral cervical prominent lymph nodes are seen the largest is seen at the left lower cervical measures about 1.8x1.1 cm.
- Normal appearance of the nasopharynx, oropharyngeal and laryngeal air spaces.
- No glottic, supra or infra glottic mass lesions.
- Intact cartilaginous skeleton of the larynx.
- Normal appearance of submandibular, parotid salivary glands.
- Normal size, enhancement & symmetrical appearance of thyroid glands.
- Normal appearance of the neck muscles & vessels.

II Chest:-

- Left breast diffuse ill defined parenchymal distortion with diffuse skin thickeing.
- Multiple left axillary level I & II pathological lymph nodes largest measuring 2 x 1.5 cm some of them show extracaspular invasion.
- Few left internal mammary enlarged lymph nodes largest measuring 0.8 x 0.5 cm.
- Clear both lung fields. No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

III Abdomen & pelvis:

CT Scan

Patient Name: Sanaa Shaaban Mohamed Ali	Date : 08/03/2025
Exam : C.T CHEST WITH CONTRAST	Age : 41 Year(s)
Medical ID: 754/2025	Pat. ID: 97818

- The liver is of average size with homogenous CT texture. No focal lesions or contour irregularities.
- Patent homogenously enhancing portal vein and is main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.

The examined skeleton shows:

- Heterogenous texture of the examine bones with mottled appearance.

Opinion:

- ***Left breast diffuse ill defined parenchymal distortion with diffuse skin thickeing.***
- ***Multiple left axillary level I & II pathological lymph nodes.***
- ***Few left internal mammary enlarged lymph nodes.***
- ***Heterogenous texture of the examine bones with mottled appearance? Metastatic rather than metabolic for bone scan correlation.***

Dr. Ali Saber, MSc.

Much obliged,

Dr. Reham Anwar, FEBR, MD

CT Scan
[[DOCTYPE:CT_SCAN]]

Mrs.Sanaa Shaban Mohamed

Date: 17/02/25

Ref. By Prof. Dr / Yasser Mohamed

BOTH BREAST ULTRASOUND REVEALED

RIGHT BREAST

- Normal breast parenchyma maintaining normal fibro glandular architectural pattern
- Normal ductal pattern and caliber .
- No dominant mass lesions seen
- Normal thickness of the skin.
- Normal nipple, areola complex.
- Right axilla show small accessory breast tissue , there are two small benign non-specific axillary lymph nodes the largest measures 16x7mm , oval in shape with preserved fatty hilum

LEFT BREAST

- There is ill defined hypoechoic heterogenous soft tissue mass seen at upper outer quadrant measures about 42x36mm , it show speculated outline.
  Small linear hypoechoic extension from the mass measures 35x7mm seen above the lesion
- Mild retro-areolar ductectesia .
- Diffuse thickened edematous skin
- Left axilla show two lymph nodes the largest measures 16x11mm , oval in shape with preserved fatty hilum

Conclusions

- Left breast mass likely malignant (BIRADS V)

Yours truly

99MTC-MDP BONE SCAN

Desired Information: -
skeletal survey.

Technique:
Delayed Whole body imaging in anterior and posterior projection performed 2 hours after I.V administration of 20 mCi 99m Tc-MDP in the following manner:

Report:

No hot spot that account for osseous deposits could be detected allover the surveyed skeleton.
Degenerative changes are seen over dorso-lumbar vertebrae.
Arthritic changes are seen over both knees.
Both kidneys are normally visualized.

Conclusion:

No definite evidence of metastatic osseous deposits.
