**Pathology Report****Clinical Data:**

Left breast cancer post NACT

**Nature of the specimen:**

Left wide local excision and axillary clearence specimens , collected at 2/8/23

**Gross Examination:**

Two specimens were recieved :

- Axillary clearence specimen :Fibrofatty tissue peice measured 8x7 cm , enclosing 16 nodules up to 2.5x0.5 cm
- Left wide local excision specimen measured 10x6x3 cm with covering skin ellipse measured 6x3 cm including nipple.

## • Tumor extent

o Number: Two vaguely firm gritty greyish white masses (one of them was wired), 2cm from each other. .

o Size: 1.2x1cm each .

o Skin involvement: Unremmarkable grossly

• Distance from margins:1 cm from deep margin (least margin)

• Additional pathologic findings:There was a double wired rubbery greyish white retroareolar area measured 3.3x3 cm .

## • Frozen section:

-Free margins

**Microscopic examination:**

- Histological type:Bifocal invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G III(3+3+2)
- Tumor cellularity:80%
- Angioinvasion:Not detected.

Pathology Report

## Clinical Data:

Left breast mass lesion

Nature of the specimen:

Tru cut biopsy collected 26-12-2022 ( 11:43 AM)

## Gross Examination:

Multiple greyish white tissue cores up to 1 cm . Totally submitted

## Microscopic examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G II(3+2+1)

## Diagnosis:

Left breast mass lesion , Tru cut biopsy.

- Invasive duct carcinoma grade II
- For IPT ( ER- PR- HER2- KI67)

|--------------------------------------------------|-------------------|
| Patient Name: Sabah Mahmoud Abd Al Azeem Mohamed | Date : 29/01/2023 |
| Exam : C.T. ABDOMEN & PELVIS WITH CONTRAST       | Age : 35 Year(s)  |
| Medical ID:                                      | Pat. ID: 27965    |

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS: -**

**Findings:**

**I Chest:-**

- Left breast mass is seen measuring about 2.6 x 3.3 cm with pathologically enlarged left axillary lymph nodes the largest is seen measuring about 4.2 x 2.3 cm.
- No sizable pulmonary nodules, masses, areas of consolidation or cavitary lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

**II Abdomen & pelvis:**

- The liver is enlarged in size with homogenous low CT texture. No focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Anteverted uterus is seen with IUD seen within.

**Tc<sup>99m</sup> MDP SKELETAL SCINTIGRAPHY**

Clinical history

- 35-year-old female patient with history of left breast cancer.

Technique

- Anterior and posterior whole body scans were acquired 2 hours post IV injection of 740 MBq of the tracer.

Findings

- No abnormal osseous tracer uptake is seen that would account for bone deposits.
- Arthritic changes of shoulders are noted.

N.B: bilateral breast soft tissue tracer uptake is seen, for clinical correlation.

Opinion

- No convincing scintigraphic evidence of metastatic osseous lesions.

Dr. Mema Nasef

Dr. Nahla Dessoki, MD

|                                                 |                   |
|-------------------------------------------------|-------------------|
| Patient Name: Sabah Mahmoud Abdel Azeem Mohamed | Date : 22/06/2023 |
| Exam : ultrasound BREAST (BOTH SIDE )           | Age : 36 Year(s)  |
| Medical ID: 279/2023                            | Pat. ID: 27965    |

**Combined bilateral breast mammography and complementary ultrasound**

**Indication:**

left breast pathologically proven malignant mass on NACT for assessment.

**Technique**

- Bilateral MLO and CC views
- Bilateral breast ultrasound

**Report:**

- Scattered fibro glandular density (ACR B)
- Left breast shows UOQ rather central clip with related small asymmetry, associated with amorphus calcifications, of linear distribution, extending anteriorly just beyond the nipple, measured 6.5cm.
- Complementary ultrasound revealed left breast small fibrotic band, seen at 11 o'clock 6cm from the nipple, measuring 0.5x1.7cm (was 2.1x2.2cm, in prior study dated 26/12/2022)
- Another anteriorly located nodule, is measured 6mm
- No right breast solid or cystic masses
- Normal skin thickness, and nipple-areola complex of the right breast.
- Nonspecific right axillary LN
- The previously reported left axillary pathological LNs, is no more appreciated in today's study
- Free left infra and supra-clavicular regions.

**Opinion:**

- Partial radiological response of the left breast 11 o'clock malignant mass associated with linear calcifications (BIRADS 6)
- Benign findings right breast (BIRADS 2)

Yours truly

### IMMUNOHISTOCHEMISTRY REPORT

#### Clinical Data:

Left breast mass lesion

Nature of the specimen:

Tru cut biopsy collected 26-12-2022 ( 11:43 AM)

Gross Examination:

Multiple greyish white tissue cores up to 1 cm . Totally submitted

Sections prepared from paraffin block for immune- staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9)

Microscopic examination:

• Histological type: Invasive duct carcinoma

• Grade (differentiation+ nuclear pleomorphism + mitosis): G II(3+2+1)

\*IPT:

ER: Weak nuclear reaction in 10% of tumor cells (Allred score 3/8)

PR: Weak nuclear reaction in 1% of tumor cells (Allred score 2/8)

Her-2: Strong complete membrane reaction in >10% of tumor cells (score 3+)

Ki 67: 70 % nuclear reaction in tumor cells

Positive control showed appropriate reactivity

Diagnosis:

Left breast mass lesion , Tru cut biopsy:

• Invasive duct carcinoma grade II

\*IPT:

ER: Positive (score 3/8).

\*PR: Negative (score 2/8).

HER-2: Positive (score 3+).

Ki67: Positive in 70% of tumor cells.

dr.esraa magdy

**Presidential Program for Women's health**

Name: Sabah Mahmoud

Date: 26.12.2022

**Bilateral Full field Digital Mammography**

**Clinical summary:** left breast mass.

**Technique**

Mediolateral oblique and CC views

High resolution ultrasound

**Detailed Findings**

**Left breast:**

- Heterogenous fibroglandular pattern (ACR C)
- UOQ rounded lesion with partially obscured and speculated margin.
- **Ultrasound** demonstrated its solid nature 12 o'clock, zone B bilobed mass lesion, hypoechoic with speculated margins, measures 22x21 mm, with peripheral vascularity on Doppler study.
- Suspected small hypoechoic lesion seen at same area measuring 6 mm,
- Normal skin/nipple/areolar complex.
- Pathological axillary lymph node seen at level I measuring 27x21 mm with effaced hilum.

**Right breast:**

- Heterogenous fibroglandular pattern (ACR C)
- No masses or microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areolar complex.
- Preserved axillary LNs.

**Conclusion:**

Let breast: (BIRADS5 =highly suspicious) left UOQ suspicious lesion as described with suspected few satellites at same quadrant, U/S guided biopsy is done today.

Right breast: (BIRADS 1= Normal).

Best regards,  
Dr Rania Mohamed MSc

Name: Sabah Mahmoud Abd El-Azim

Date: 18<sup>th</sup> February 2023

**Contrast enhanced Spectral Mammography**

**CLINICAL SUMMARY:** left breast invasive duct carcinoma grade II

CC & MLO low energy & recombined (post contrast) images

**FINDINGS:**

Background Uptake: minimal background enhancement

ACR: c (heterogeneous dense breast parenchyma)

**LEFT BREAST:**

- **Low energy (Non contrast) images:**
  - Upper inner & central posterior third; irregular shape heterogeneous dense lesion with spiculated margin, grouped fine pleomorphic microcalcifications within lesion.
  - Central, middle third; linear fine pleomorphic microcalcifications anterior & inferior to the lesion.
- **Recombined (Post contrast) images:**
  - Upper inner & central posterior third; irregular shaped non-circumscribed spiculated margin marked heterogeneous mass enhancing lesion measuring 4 x 3.4 x 3.6 cm in CC, AP & Longitudinal dimensions respectively and 6.5 cm distance from the nipple.
  - Central middle third; mild heterogeneous linear non-mass enhancing lesion measuring 2.2 x 0.4 cm in average diameter, 2.4 cm distance from the main lesion and 1.7 cm distance from the nipple.
- Normal skin / nipple / areolar complex.
- **Complementary US:**
  - Upper inner & central posterior third, 11-12 o'clock; irregular shaped spiculated margin heterogeneous hypoechoic solid lesion showing internal calcifications, non-parallel orientation and posterior acoustic shadowing
  - Retroareolar ill-defined area of altered parenchymal echogenicity with internal calcifications
  - At least 3 level I axillary lymph nodes; the largest measuring 4 x 2.5 cm in average diameter with globular shape, diffuse cortical thickness and effaced hilum

**RIGHT BREAST:**

- **Low energy (Non contrast) images** No masses, asymmetry or distortion or suspicious calcifications.
- **Recombined (Post contrast) images** show, no pathological uptake.
- Normal skin / nipple / areolar complex.

**IMPRESSION:**

**LEFT BREAST:** multifocal pathological proved malignancy with level I pathological lymph nodes as described (BIRADS 6)

**RIGHT BREAST:** (BIRADS 2= benign)

### Pathology Report

#### Clinical Data:

Left breast mass lesion

Nature of the specimen:

Tru cut biopsy collected 26-12-2022 ( 11:43 AM)

#### Gross Examination:

Multiple greyish white tissue cores up to 1 cm . Totally submitted

#### Microscopic examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G II(3+2+1)

#### Diagnosis:

Left breast mass lesion , Tru cut biopsy:

- Invasive duct carcinoma grade II
- For IPT ( ER- PR- HER2- KI67)

Prof.Dr.Gamal Abdelatty  
Dr.Marwa Mahmoud

**Presidential Program for Women's health**

Name: Sabah Mahmoud

Date: 26.12.2022

**Bilateral Full field Digital Mammography**

**Clinical summary:** left breast mass.

**Technique**

Mediolateral oblique and CC views

High resolution ultrasound

**Detailed Findings**

**Left breast:**

- Heterogenous fibroglandular pattern (ACR C)
- UOQ rounded lesion with partially obscured and speculated margin.
- **Ultrasound** demonstrated its solid nature 12 o'clock, zone B bilobed mass lesion, hypoechoic with speculated margins, measures 22x21 mm, with peripheral vascularity on Doppler study.
- Suspected small hypoechoic lesion seen at same area measuring 6 mm,
- Normal skin/nipple/areolar complex.
- Pathological axillary lymph node seen at level I measuring 27x21 mm with effaced hilum.

**Right breast:**

- Heterogenous fibroglandular pattern (ACR C)
- No masses or microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areolar complex.
- Preserved axillary LNs.

**Conclusion:**

Let breast: (BIRADS5 =highly suspicious) left UOQ suspicious lesion as described with suspected few satellites at same quadrant, U/S guided biopsy is done today.

Right breast: (BIRADS 1= Normal).

Best regards,  
Dr Rania Mohamed MSc

Name: Sabah Mahmoud Abd El-Azim

Date: 18<sup>th</sup> February 2023

**Contrast enhanced Spectral Mammography**

**CLINICAL SUMMARY:** left breast invasive duct carcinoma grade II

CC & MLO low energy & recombined (post contrast) images

**FINDINGS:**

Background Uptake: minimal background enhancement

ACR: c (heterogeneous dense breast parenchyma)

**LEFT BREAST:**

- **Low energy (Non contrast) images:**
  - Upper inner & central posterior third; irregular shape heterogeneous dense lesion with spiculated margin, grouped fine pleomorphic microcalcifications within lesion.
  - Central, middle third; linear fine pleomorphic microcalcifications anterior & inferior to the lesion.
- **Recombined (Post contrast) images:**
  - **Upper inner & central posterior third;** irregular shaped non-circumscribed spiculated margin marked heterogeneous mass enhancing lesion measuring 4 x 3.4 x 3.6 cm in CC, AP & Longitudinal dimensions respectively and 6.5 cm distance from the nipple.
  - **Central middle third;** mild heterogeneous linear non-mass enhancing lesion measuring 2.2 x 0.4 cm in average diameter, 2.4 cm distance from the main lesion and 1.7 cm distance from the nipple.
- Normal skin / nipple / areolar complex.
- **Complementary US:**
  - **Upper inner & central posterior third, 11-12 o'clock;** irregular shaped spiculated margin heterogeneous hypoechoic solid lesion showing internal calcifications, non-parallel orientation and posterior acoustic shadowing
  - **Retroareolar** ill-defined area of altered parenchymal echogenicity with internal calcifications
  - **At least 3 level I axillary lymph nodes;** the largest measuring 4 x 2.5 cm in average diameter with globular shape, diffuse cortical thickness and effaced hilum

**RIGHT BREAST:**

- **Low energy (Non contrast) images** No masses, asymmetry or distortion or suspicious calcifications.
- **Recombined (Post contrast) images** show, no pathological uptake.
- Normal skin / nipple / areolar complex.

**IMPRESSION:**

**LEFT BREAST:** multifocal pathological proved malignancy with level I pathological lymph nodes as described (BIRADS 6)

**RIGHT BREAST:** (BIRADS 2= benign)

توصية المجلس الطبي المتخصص

رقم ٢٧٧٧٤٢٦١ لسنة ٢٠٢٣  
الرقم القومي ٢٨٧٠٤٠٢٢١٠٠٧٤٥

### الإدارة العامة للمجالس الطبية المتخصصة

- بعد الاطلاع علي تقرير الكشف الطبي والابحاث الخاصه بالمواطن المذكور ادناه
- ووفقا لما جاء بقرار وزير الصحة رقم ٤٠٨ لسنة ٢٠٠٩
- وعلي توصية المجلس الطبي المتخصص رقم ٢٧٣٩٨٤١٩ لسنة ٢٠٢٣/٠٦/٠٥
- وعلي تقرير اللجنة الثلاثية الصادر من المستشفى بتاريخ ٢٠٢٣/٠٧/٠٦
- اوصي المجلس الطبي المتخصص بجلسة ٢٠٢٣/٠٧/٠٩

بالموافقة علي استكمال علاج المواطن / صباح محمود عبد العظيم محمد من سرطان بالثدي (مبادرة) الصادر في شأنه التوصية رقم ٢٧٣٩٨٤١٩ بمستشفى مركز اورام دار السلام بقسم الاورام لمدة ٧ يوم خارجي وداخلي تدخل جراحي لاستئصال كامل /تحفظي للثدي +تفريغ الغدد الليمفاوية و/ او الغدد الحارسة (كود ١١٩١٤) .  
وفقا لما جاء باسعار بروتوكولات العلاج علي نفقة الدولة وطبقا لكود الحالة المرضية

تحريرا في ٢٠٢٣/٠٧/٠٩

تعتبر التوصية نافذه من تاريخ تحرير اللجنة الثلاثية  
قيمة القرار مخصصة للعلاج ولا يجوز المطالبة بأي نفقات أخرى سواء للإنتقال أو أي إجراء خارج منطوق القرار

### LEFT BREAST HIGH RESOLUTION ULTRASOUND

**Indication:**

Patient had CBS.

**Technique**

- Bilateral breast ultrasound

**Report:**

- left breast UOQ focal parenchyma distortion, owing to prior surgical interference with clear operative bed with no evidence of recurrent mass lesions.
- Free left infra and supra clavicular regions.

**Opinion:**

- Left breast focal parenchymal distortion owing to prior surgical interference (C9S) with pcst-operative sequel, with free operative bed with no evidence of recurrent mass lesions (BIRADS 2)

**Combined bilateral breast mammography and complementary ultrasound**

**Indication:**

left breast pathologically proven malignant mass on NACT for assessment.

**Technique**

- Bilateral MLO and CC views
- Bilateral breast ultrasound

**Report:**

- Scattered fibro glandular density (ACR B)
- Left breast shows UOQ rather central clip with related small asymmetry, associated with amorphus calcifications, of linear distribution, extending anteriorly just beyond the nipple, measured 6.5cm.
- Complementary ultrasound revealed left breast small fibrotic band, seen at 11 o'clock 6cm from the nipple, measuring 0.5x1.7cm (was 2.1x2.2cm, in prior study dated 26/12/2022)
- Another anteriorly located nodule, is measured 6mm
- No right breast solid or cystic masses
- Normal skin thickness, and nipple-areola complex of the right breast.
- Nonspecific right axillary LN
- The previously reported left axillary pathological LNs, is no more appreciated in today's study
- Free left infra and supra-clavicular regions.

**Opinion:**

- Partial radiological response of the left breast 11 o'clock malignant mass associated with linear calcifications (BIRADS 6)
- Benign findings right breast (BIRADS 2)

Yours truly

Signature Dr. Engy Abdallah

22/06/2023 3:52 PM

**Presidential Program for Women's health**

Name: Sabah Mahmoud

Date: 26.12.2022

**Bilateral Full field Digital Mammography**

**Clinical summary:** left breast mass.

**Technique**

Mediolateral oblique and CC views

High resolution ultrasound

**Detailed Findings**

**Left breast:**

- Heterogenous fibroglandular pattern (ACR C)
- UOQ rounded lesion with partially obscured and speculated margin.
- **Ultrasound** demonstrated its solid nature 12 o'clock, zone B bilobed mass lesion, hypoechoic with speculated margins, measures 22x21 mm, with peripheral vascularity on Doppler study.
- Suspected small hypoechoic lesion seen at same area measuring 6 mm,
- Normal skin/nipple/areolar complex.
- Pathological axillary lymph node seen at level I measuring 27x21 mm with effaced hilum.

**Right breast:**

- Heterogenous fibroglandular pattern (ACR C)
- No masses or microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areolar complex.
- Preserved axillary LNs.

**Conclusion:**

Let breast: (BIRADS5 =highly suspicious) left UOQ suspicious lesion as described with suspected few satellites at same quadrant, U/S guided biopsy is done today.

Right breast: (BIRADS 1= Normal).

Best regards,  
Dr Rania Mohamed MSc

**IMMUNOHISTOCHEMISTRY REPORT****Clinical Data:**

Left breast mass lesion

Nature of the specimen:

Tru cut biopsy collected 26-12-2022 ( 11:43 AM)

Gross Examination:

Multiple greyish white tissue cores up to 1 cm . Totally submitted

Sections prepared from paraffin block for immune- staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9)

Microscopic examination:

- Histological type: Invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G II(3+2+1)

\*IPT:

ER: Weak nuclear reaction in 10% of tumor cells (Allred score 3/8)

PR: Weak nuclear reaction in 1% of tumor cells (Allred score 2/8)

Her-2: Strong complete membrane reaction in &gt;10% of tumor cells (score 3+)

Ki 67: 70 % nuclear reaction in tumor cells

Positive control showed appropriate reactivity

Diagnosis:

Left breast mass lesion , Tru cut biopsy:

- Invasive duct carcinoma grade II

\*IPT:

ER: Positive (score 3/8).

PR: Negative (score 2/8).

HER-2: Positive (score 3+).

Ki67: Positive in 70% of tumor cells.

### IMMUNOHISTOCHEMISTRY REPORT

The cancer in this sample has a low level (1-10%) of ER expression by IHC. There are limited data on the overall benefit of endocrine therapies for patients with these results, but they currently suggest possible benefit, so patients are considered eligible for endocrine treatment. There are data that suggest invasive cancers with these results are heterogenous in both behavior and biology and often have gene expression profiles more similar to ER-negative cancers

### Pathology Report

- Ductal carcinoma in situ: Focal.
- Skin involvement: Nipple showed paget's disease
- Lymph node involvement: Free (0/16) , one node showed necrotic tumor tissue.
- Resection Margins: Free resected margins
- Histological response to the apy: Pathologic partial response.
- Additional pathologic findings: The double wired area showed ductal carcinoma insitu intermediate grade in two ducts also showed usual ductal hyperplasia and adenosis.

#### Diagnosis:

Left breast cancer post NACT, wide local excision and axillary clearence specimens:

- Bifocal invasive duct carcinoma , grade III.
- Tumor cellularity: 80%
- Nipple showed paget's disease
- The double wired area showed ductal carcinoma insitu intermediate grade .
- Free resected margins.
- Free lymph nodes: (0/16) , one node showed necrotic tumor tissue.
- Pathologic partial response.
- Stage : ypT1b , ypN0.

- Right ovarian cysts are noted the largest is seen measuring about 1.7 x 2.6 cm, likely functional.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic collections.
- No lytic or sclerotic osseous lesions.

**Opinion:**

- ***Known case of breast cancer showing left breast mass with pathologically enlarged left axillary lymph nodes.***
- ***No pulmonary or hepatic metastatic deposits.***

## **POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS: -**

### **Findings:**

#### **I Chest:-**

- Left breast mass is seen measuring about 2.6 x 3.3 cm with pathologically enlarged left axillary lymph nodes the largest is seen measuring about 4.2 x 2.3 cm.
- No sizable pulmonary nodules, masses, areas of consolidation or cavitory lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

#### **II Abdomen & pelvis:**

- The liver is enlarged in size with homogenous low CT texture. No focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Anteverted uterus is seen with IUD seen within.

**Patient Name:** Sabah Mahmoud

**Date:** 01.08.2023

**Mammographic Guided Stereotactic Wire localization:**

**Clinical summary:** LT breast CA that was under NAC. For localization of a mass with clip and margins of microcalcifications.

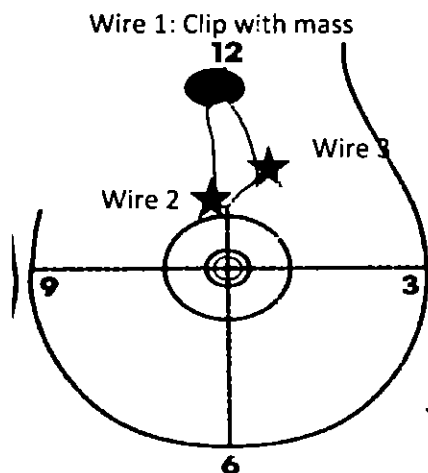

**Technique:**

Under complete sterile conditions, 3ml of local anesthetic were administered at the site of concern in the LT breast. A 21G wire was used to localize the three locations.

**Wire 1:** located just beside the mass with clip at 11:00, 1cm deep to the skin, and 9cm from the nipple. This is the most posterior end of calcifications.

**Wire 2:** located retroareolar at the most anterior point of calcifications, 1cm deep to the skin, and 2mm from the nipple.

**Wire 3:** located at 1:00, the most lateral point of calcifications, 1.5cm deep to the skin, and 3.5cm from the nipple.

Best Regards,  
Dr Norran Hussein MD FRCR

## IMMUNOHISTOCHEMISTRY REPORT

**Clinical Data:**

### Left breast mass lesion

**Nature of the specimen:**

Tru cut biopsy collected 26-12-2022 ( 11:43 AM)

**Gross Examination:**

**Multiple greyish white tissue cores up to 1 cm . Totally submitted**

Sections prepared from paraffin block for immune- staining using Bench Mark ULTRA system for ER, PR,HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9)

**Microscopic examination:**

- **Histological type: Invasive duct carcinoma**

- **Grade** (differentiation + nuclear pleomorphism + mitosis): G II (3+2+1)

**\*IPT:**

ER: Weak nuclear reaction in 10% of tumor cells (Allred score 3/8)

PR: Weak nuclear reaction in 1% of tumor cells (Allred score 2/8)

**Her-2: Strong complete membrane reaction in >10% of tumor cells (score 3+)**

Ki 67: 70 % nuclear reaction in tumor cells

**Positive control showed appropriate reactivity**

**Diagnosis:**

**Left breast mass lesion , Tru cut biopsy:**

- Invasive duct carcinoma grade II

\*IPT:

**ER: Positive (score 3/8).**

\* PR: Negative (score 2/8).

HER-2: Positive (score 3+).

**Ki67: Positive in 70% of tumor cells.**

### IMMUNOHISTOCHEMISTRY REPORT

The cancer in this sample has a low level (1-10%) of ER expression by IHC. There are limited data on the overall benefit of endocrine therapies for patients with these results, but they currently suggest possible benefit, so patients are considered eligible for endocrine treatment. There are data that suggest invasive cancers with these results are heterogeneous in both behavior and biology and often have gene expression profiles more similar to ER-negative cancers

### Pathology Report

#### Clinical Data:

Left breast cancer post NACT

#### Nature of the specimen:

Left wide local excision and axillary clearance specimens , collected at 2/8/23

#### Gross Examination:

Two specimens were recieved :

- Axillary clearance specimen :Fibrofatty tissue peice measured 8x7 cm , enclosing 16 nodules up to 2.5x0.5 cm
- Left wide local excision specimen measured 10x6x3 cm with covering skin ellipse measured 6x3 cm including nipple.
- Tumor extent
  - o Number: Two vaguely firm gritty greyish white masses (one of them was wired), 2cm from each other. .
  - o Size: 1.2x1cm each .
  - o Skin involvement: Unremmarkable grossly
- Distance from margins:1 cm from deep margin (least margin)
- Additional pathologic findings:There was a double wired rubbery greyish white retroareolar area measured 3.3x3 cm .
- Frozen section:
- Free margins

#### Microscopic examination:

- Histological type:Bifocal invasive duct carcinoma
- Grade (differentiation+ nuclear pleomorphism + mitosis): G III(3+3+2)
- Tumor cellularity:80%
- Angioinvasion:Not detected.

### Pathology Report

- Ductal carcinoma in situ: Focal.
- Skin involvement: Nipple showed paget's disease
- Lymph node involvement: Free (0/15) , one node showed necrotic tumor tissue.
- Resection Margins: Free resected margins
- Histological response to therapy: Pathologic partial response.
- Additional pathologic findings: The double wired area showed ductal carcinoma insitu intermediate grade in two ducts also showed usual ductal hyperplasia and adenosis.

#### Diagnosis:

Left breast cancer post NACT, wide local excision and axillary clearance specimens:

- Bifocal invasive duct carcinoma , grade III.

- Tumor cellularity: 80%

- Nipple showed paget's disease.

- The double wired area showed ductal carcinoma insitu intermediate grade .

- Free resected margins.

- Free lymph nodes: (0/16) , one node showed necrotic tumor tissue.

- Pathologic partial response.

- Stage : ypT1b , ypN0.

Informed Consent for Procedure  
إقرار بالعلم والموافقة على إجراء تداخلي

انه في يوم: ١٤/١٢/٢٠٢٤ الموافق: ١٨/١٢/٢٠٢٤  
أقر أنا الموقع اننا  
رقم قومي: ٢٨٧.٤.٢٢١.٠٠٧٤

انني قد وافقت على اجراء .....  
وان الطبيب المعالج: ..... قد تم شرح الاجراء لي شرحا مفصلا متضمنا على : وصف الاجراء والهدف منه  
والبدائل المتوفرة له والتطعيمات الواجب اتباعها قبل الاجراء وبعده والفوائد التي سوف تترتب على الاجراء بجانب كافة المضاعفات  
التي يمكن ان يسببها وتكون خارجة عن إرادة الطبيب بالرغم من بذل كل غلبة طبية متوفرة , كذلك اوافق على اجراء اي عمليات  
أخرى أو بديلة تتضح الحاجة إليها اثناء سير العملية بما في ذلك اجراء اي عملية أخرى (ثاقوية) مرتبطة بالعملية الأصلية ارتباطا  
لازما إذا ما دعت الضرورة إلى ذلك , كما اجاب الطبيب على كل تساؤلاتي واستفساراتي.
