Pathology Report

Clinical Data: Right breast mass.
Nature of Specimen: Block Revision.

Technique:

- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:

- IPT (Positive control showed appropriate reactivity):
 - ER: Strong nuclear reaction in 80% of tumor cells (score 8/8).
 - PR: Strong nuclear reaction in 90% of tumor cells (score 8/8).
 - Her2: Moderate complete membrane reaction in >10% of tumor cells (score 2+)
- SISH: Amplified.
(Average Her2 copy No. > (5), Her2/CEP17 ratio > (3.03))
- Ki67: 30% nuclear reaction.

Conclusion:

Right breast mass, Block Revision:
Invasive duct carcinoma, Grade II with micropapillary features.

IPT:

- ER: Positive (score 8/8).
- PR: Positive (score 8/8).
- Her2: Equivocal (score 2+).
- SISH: Amplified.
- Ki67: 30%.

Pathology Report

* Scoring system: "ER, PR"

ASCO-CAP ER/PR Test Guideline Recommendations: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak; 2, intermediate; and 3, strong). Total score from 0 to 8.

* Scoring system: "Her2"

Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Pathology Report

Diagnosis:

Right MRM (post NACT) :

Invasive duct carcinoma grade II (Actual tumour size 4x3x1cm), cellularity 90 %

- Free margins
- Free nipple and areola
- Positive L.Ns (1/15)
- Pathologic partial response
- Stage : ypT2 , ypN1
- RCB : 3.936 , RCB class III

Exam : ultrasound BREAST (BOTH SIDE)	Age : 67 Year(s)
Medical ID: 3122/2024	Pat. ID: 93758

CENTRAL BREAST ULTRASONOGRAPHY REVEALED:

Exam 3122/2024 after Right mastectomy / ..

- Composition: Homogenous fatty background parenchymal echo-texture.
- Clear mastectomy bed on the right side with infected seroma measuring (7.5 x 2.3 cm)(TR X AP).
- No detected suspicious solid or cystic masses.
- Normal left skin and nipple.
- No detected significant axillary lymph nodes.

CONCLUSION:

- 1. Right post operative changes (BIRADS 2 category).
- 2. Normal left breast (BIRADS 1 category).

Much Obligated
