Molecular Testing Report

Clinical Data: Metastatic adenocarcinoma of GIT origin
Nature of specimen: Tru cut biopsy.

Gross Examination:

Paraffin block received by Inter Mark. H&E stained slide is prepared, examined by pathologist and confirmed that block contains tumor matching with the requested test

• **Test(s) requested:** KRAS, NRAS and BRAF Gene, Mutation testing.

Methodology and Limitations:

Method Limitation: The designed primers used in this method and the analysis pipeline are capable of detecting KRAS codons 12, 13, 60, 61, 117 and 146, NRAS codons 12, 13, 60, 61 and 146, and BRAF codon V600E mutations only.

Limit of detection:

- Sensitivity of KRAS-G12D, KRAS-G12A, KRAS-G12V, KRAS-G12S, KRAS-G12R, KRAS-G12C, KRAS-G13D, KRAS-G13C, KRAS-Q61L, KRAS-A146, NRAS-G12D, NRAS-G12S, NRAS-G13D, NRAS-G13R, NRAS-G12C, NRAS-G12V, NRAS-G12A, NRAS-G13V, NRAS-Q61L, NRAS-Q61H and NRAS-K117N mutations are 1% in a background of 99% normal DNA at 10 ng sample DNA amount.
- Sensitivity of KRAS-Q61R, KRAS-Q61H, NRAS-Q61R, NRAS-Q61K & NRAS-A146T mutations are 2% in a background of 99% normal DNA at 10 ng sample DNA amount.
- Sensitivity of KRAS-K117N, KRAS-A146T, KRAS-A146V and BRAF V600E mutations are 5% in a background of 99% normal DNA at 10 ng sample DNA amount.

Indication: Predictive test for response to therapy.

Gene	Result	Mutation Detected
KRAS	Mutant	Mutation detected in Exon 2
NRAS	Not Tested	---
BRAF	Not Tested	---

Molecular Testing Report

Interpretation & Comment

Based on the current results This patient should not be considered for anti-EGFR monoclonal antibody targeted therapy because as per the NCCN guidelines Colorectal tumors with any known KRAS mutation (exon 2, 3, 4) or NRAS mutation (exon 2, 3, 4) are associated with lack of clinical response to anti-EGFR.

Test Background

Approximately 40% of patients with mCRC harbor an activating KRAS & NRAS mutations in 4% of the patients. The outcome of patients with RAS mutations is worse compared to RAS wild type (RAS wt) cases. However, KRAS & NRAS mutations also have distinct impacts on survival in mCRC; the prognosis of the aggressive NRAS mutant molecular subset is poor.

According to National Comprehensive Cancer Network guidelines (NCCN; Version 1.2020) for metastatic colorectal cancer (mCCR), expanded RAS panel for activating mutation of KRAS & NRAS is crucial at time of diagnosis to select the patients who are likely to benefit from anti-EGFR therapies.

Test Description

- Tissue sections were reviewed by a pathologist and relevant tumor was selected for analysis.
- DNA was isolated and amplified by quantitative polymerase chain reaction (qPCR) using NRAS and KRAS CE-IVD kits according to manufacture protocol. results interpreted according to the manufacture user guide. Mutation nomenclature was performed considering the following reference sequences: NM_004985.4 (KRAS) and NM_002524.4 (NRAS gene).
- BRAF V600E mutation specific Competitive allele specific TaqMan assay along with its reference wildtype assay were performed for each sample to accurately interpret the results.

Disclaimer:

- The molecular testing reported herein was performed at an external reference lab (57357 molecular laboratory).

Referred by: Prof.Dr. no doctor

Hospital: Goustave Roussey International Egypt

Color Duplex scanning of the port-A-Cath revealed: -

- o Port-A-Cath is seen introduced through the left IJV identified by two echogenic lines
- o The left IJV is mildly dilated partially compressible showing adherent echogenic thrombus attached to its anterior wall consistent with subacute partial thrombosis
- o The port-A-Cath pocket is seen at the right infra clavicular region with no related collection or hematoma.

التشخيص:

أسباب الحاجة إلى نقل الدم في حالات:

١- نقل الصفائح الدموية: للتعويض المفقود لدى الأشخاص الذين يعانون من انخفاض في عدد الصفائح الدموية نتيجة العلاج الكيميائي أو اضطراب

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

١٦: المخاطر و المضاعفات المحتملة بما في ذلك:

ب- ارتفاع درجة الحرارة.

مشاكل في القلب أو الرئة نتيجة فائض السوائل أو التحسين الشديد، تتفاعل مع خطأ في المطابقة أعراق الدم، مما قد يؤدي إلى تفاعل جسمي شديد.

حدوث فرط الحديد: قد يتسبب فرط الحديد بطفح في مناطق وأعضاء مختلفة من الجسم إن لم يتم تداركه وعلاجه في الوقت المناسب، لا سيما إن

التهاب الكلى الحاد في الأطفال: إصابة الكلية المتعلقة بنقل الدم، وهو مرض نادر قد يتسبب بثلث الوفاة.

حقاً، في طرح الأسئلة و الحصول على الاجابات الكاملة قبل اتخاذ القرار.
