IMMUNOHISTOCHEMISTRY REPORT

Clinical Data: Right breast cancer, palpable right and left axillary lymph nodes.

Nature of Specimen: Slide Revision.

Technique:

- Sections were prepared from the paraffin block, processed in Bench Mark ULTRA machine (Ventana) and stained by rabbit monoclonal antibodies using ultra view HRP DAB as chromogen and hematoxylin as counter stain. The sections treated against:
- ER clone (1E2), PR clone (SP1), Her2 clone (4B5), & Ki67 clone (30-9).

Results:

- * IPT (Positive control showed appropriate reactivity):
- E-Cadherin : Positive .
- ER: Strong nuclear reaction in 80% of tumor cells (Allred score 8/8).
- PR: Strong nuclear reaction in 80% of tumor cells (Allred score 8/8).
- Her2: Faint incomplete membrane reaction in the tumor cells (score 1+).
- Ki67: 29% nuclear reaction of tumor cells.

Conclusion:

Right breast cancer, palpable right and left axillary lymph nodes, Slide revision:

Invasive duct carcinoma Grade II.

Negative lymph nodes (0/21)

- Stage: pN0

IPT:

- ER: Positive (score 8/8).
- PR: Positive (score 8/8).
- Her2: Score 1+.
- Ki67: Positive in 29% of tumor cells.

IMMUNOHISTOCHEMISTRY REPORT

Scoring system: "ER, PR"

ASCO-CAP ER/PR Test Guideline Recommendations, 2010 Allred score: proportion of cells staining (0, no staining; 1, >1%; 2, between 1% and 10%; 3, between 11% and 33%; 4, between 34% and 66% and 5, between 67%-100% of the cells staining). Intensity of positive tumor cells (0, none; 1, weak, 2, intermediate; and 3, strong). Total score from 0 to 8.

Scoring system: "Her2"

Reference: ASCO-CAP Her2 Test Guideline Recommendations, 2013. IHC 0: as defined by no staining observed or membrane staining that is incomplete and is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 1+: as defined by incomplete membrane staining that is faint/barely perceptible and within < 10% of the invasive tumor cells. IHC 2+: based on circumferential membrane staining that is incomplete and/or weak/moderate and within < 10% of the invasive tumor cells or complete and circumferential membrane staining that is intense and within < 10% of the invasive tumor cells. IHC 3+: based on circumferential membrane staining that is incomplete, intense < 10% of tumor cells.

Patient Name: Entesar Khalifa Hussein	Date : 19/12/2024
Exam : ultrasound BREAST (BOTH SIDE)	Age : 58 Year(s)
Medical ID: 4022/2023	Pat. ID: 43858

**BILATERAL BREAST MAMMOGRAPHY AND HIGH RESOLUTION
ULTRASOUND**

Indication:

Patient had CBS in the right breast.

Technique

- Bilateral MLO and CC views
- Bilateral breast ultrasound

Report:

- The breasts are almost entirely fatty (ACR B)
- No left breast suspicious mass lesions, micro calcifications or architectural distortion detected.
- right breast LIQ parenchymal distortion owing to prior surgical interference, with post-operative scarring and diffuse edema pattern in the form of increased trabeculations and skin thickness.
- Complementary ultrasound showed right breast LIQ parenchyma distortion, owing to prior surgical interference with clear operative bed with no evidence of recurrent mass lesions.
- No Bilateral breast solid or cystic mass lesions.
- Nonspecific left axillary LN, with preserved fatty hila and uniform cortical thickness.
- Free right infra and supra clavicular regions.

Opinion:

- Right breast parenchymal distortion owing to prior surgical interference (CBS) with post-operative sequel, with free operative bed with no evidence of recurrent mass lesions (BIRADS 2)
- Normal study of the left breast (BIRADS 1)

Yours truly

Patient Name: Entesar Khalifa Hussein	Date : 05/11/2022
Exam : C.T CHEST WITH CONTRAST	Age : 87 Year(s)
Medical ID:	Pat. ID: 17858

**POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST,
ABDOMEN & PELVIS REVEALED: -**

1. Chest:

- Right breast edema with skin thickening.
- Left axillary heterogeneously enhancing lesion measuring 7 cm.
- Clear both lungs.
- No pathological hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Average cardiac size. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

2. Abdomen and pelvis:

- The liver is average in size with homogenous CT texture. No definite focal lesions or contour irregularities.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- No pathological abdominal or pelvic lymph nodes.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both supra-renals.
- Smooth filling of the urinary bladder with no filling defects or diverticular outpouching.
- Normal appearance of the other pelvic organs.
- No abdominal or pelvic masses or collections.

3. The scanned skeleton:

- The scanned skeleton shows no definite worrisome lytic or sclerotic lesions.
- No vertebral structural collapse or extra-osseous soft tissue component.
