Age : 48 Y	Department : Out Patient
Referring Doc :	Registered by : Mrs. Mayada Hegazy

Pathology Report

Clinical Data: Right breast cancer, Up-Front.

Natura Specimen: Right simple mastectomy & sentinel lymph nodes biopsy.

Gross Examination:

Right simple mastectomy specimen measured 18x15.5x4 cm, with covering skin measured 17x8.5 cm. Nipple & Areola looked unremarkable grossly.
Serialing showed two masses measured 2.7x2.5x1.7 cm & 6x3.5x2 cm, located 1.5 cm apart and were 1 cm away from the least deep margin.
Also received in the same container two unremarkable skin strips 19x1 cm & 10x1 cm.
Sentinel lymph nodes: Fibrofatty tissue pieces collectively measured 3x3 cm, entangling 3 lymph nodes, the largest was 2x1.5x1 cm.
15 Blocks:
3- 1st Mass., 4- Area inbetween., 5:12- Other mass., 13- Deep margin., 14- N&A with skin strips., 15- SLNs.
Gross was done by; Dr. Mennan Hossam.

Frozen Results:

Positive metastatic deposits in one out of three sentinel lymph nodes (1/3).

Microscopic Examination:

Histological Type: Bifocal invasive lobular carcinoma.
Grade 2 (differentiation 3, nuclear pleomorphism 2, mitosis 2).
Ductal carcinoma in situ: Absent.
Lobular carcinoma insitu: Present.
Angioinvasion: Present.
Perineural invasion: Present.
Nipple & areola: Free.
Deep margin: Free.

Pathology Report

Sentinel lymph nodes: Positive metastatic deposits in one out of three sentinel lymph nodes (1/3) with no extra-nodal extension (The metastatic focus was clearly identified in one lymph node during intraoperative frozen section examination. The corresponding paraffin embedded sections did not reveal this focus due to levels variation during preparation, and the frozen section diagnosis is considered valid).

Immunophenotyping:

Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for; E-Cadherin.
Ecadherin: Negative in tumor cells.

Diagnosis:

Right breast cancer (Up-front), Right simple mastectomy & sentinel lymph nodes biopsy.
Bifocal invasive lobular carcinoma, Grade 2, with lobular carcinoma insitu (LCIS).
Ductal carcinoma in situ: Absent.
Deep margin: Free.
Nipple & areola: Free.
Sentinel lymph nodes: Positive metastatic deposits in one out of three sentinel lymph nodes (1/3) with no extra-nodal extension.
Stage: pT3(m), pN1a(sln).

Comment:

The metastatic focus was clearly identified in one lymph node during intraoperative frozen section examination. The corresponding paraffin embedded sections did not reveal this focus due to levels variation during preparation, and the frozen section diagnosis is considered valid.

Pathology Report

Clinical Data
Right breast mass

Nature of specimen
True cut biopsy, collected on 1/7/2025

Gross examination

Multiple grayish white tissue cores up to 1.5 cm, totally submitted.
IHC technique: Sections prepared from paraffin block for immune-staining using Bench Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9).

Microscopic examination

- Histological type: Mixed Invasive duct & lobular carcinoma
- Grade (differentiation + nuclear pleomorphism + mitosis): (3+2+2) Grade 2
- DCIS: Focal, low grade (solid pattern)
- LCIS: Focal
- Angiolymphatic invasion: Couldn't be detected in the received biopsy
- Perineural invasion: No
- IPT (Positive control showed appropriate reactivity):
- ER: Strong nuclear reaction in 95 % tumor cells (Allred score 8/8)
- PR: Strong nuclear reaction in 95 % tumor cells (Allred score 8/8)
- HER2: No membrane reaction in of tumor cells (score 0)
- Ki67: 20%

Patient Name: Doaa Khairi Abdel Haleem Mohamed	Date : 19/07/2025
Exam : CT CAP+C (CT Chest Abd. Pelvis)	Age : 48 Year(s)
Medical ID: 2022/2025	Pat. ID: 27596

POST CONTRAST MULTI-SLICE CT SCAN OF THE CHEST, ABDOMEN, AND PELVIS: -

Findings:

Chest:-

- Right breast small speculated lesion for sonomammographic assessment.
- Clear both lung fields. No sizable pulmonary nodules, masses, areas of consolidation or cavity lesions.
- No hilar or mediastinal lymph nodes.
- No evidence of pleural effusion, pleural thickening or masses seen.
- Normal cardiac size and shape with no gross abnormality of the cardiac chambers. No pericardial effusion detected.
- Normal CT appearance of the thoracic aorta and the great vessels.

Abdomen & Pelvis:

- The liver is of average size with homogenous CT texture showing small non-enhancing lesion at segment VIII measuring 7 mm likely cyst.
- No intra-hepatic or extra-hepatic biliary radicles dilatation.
- Patent homogeneously enhancing portal vein and its main branches as well as its main tributaries.
- Normal size & parenchymal texture of the spleen with no focal lesions seen.
- Normal size, parenchymal thickness & density of both kidneys with no stones or back-pressure changes.
- Normal appearance of the pancreas, aorta, I.V.C and both suprarenals.

Medical ID: 2022/2025	Age : 48 Year(s)
	Pat. ID: 27596

Normal appearance of the other pelvic organs.
No abdominal or pelvic masses or collections.

Scanned skeleton: no definite worrisome lytic or sclerotic focal lesions.

- Opinion:
- Right breast small speculated lesion for sonomammographic assessment.
 - Small non-enhancing lesion at segment VIII likely cyst.
 - No evidence of pulmonary, hepatic or osseous metastatic deposits.

Contrast enhanced Spectral Mammography
CLINICAL SUMMARY: Right breast pathologically proven mixed invasive ductal and lobular carcinoma.

TECHNIQUE: CC & MLO low energy & recombined (post contrast) images

FINDINGS:

Background Uptake: mild background enhancement

ACR: b (scattered fibro-glandular densities)

RIGHT BREAST:

- Low energy (Non contrast) Images: show upper outer quadrant scattered intercommunicating irregular equal density masses and nodules.
- Recombined (Post contrast) images: show corresponding upper outer quadrant and upper central (extending from 10 o'clock to 12:30 o'clock, based on targeted US examination) multiple heterogeneously enhancing irregular masses and nodules, associated with regional and intervening non-mass enhancement. The overall process occupies an area measuring about (12.3 x 12 x 9 cm) along its maximum dimensions, extending till about 3.5 cm from the nipple.

LEFT BREAST:

- Low energy (Non contrast) Images No masses, asymmetry or distortion or suspicious microcalcifications.
- Recombined (Post contrast) Images show, no pathological uptake.
- Normal skin / nipple / areolar complex.

IMPRESSION:

RIGHT BREAST: Upper outer quadrant and upper central (from 10 to 12:30 o'clock) pathological mass and non-mass enhancement with extension as above described (BIRADS 6)

LEFT BREAST: No pathological mass or non-mass enhancement (BIRADS 2= benign)

خريطة رقم (4) - الدور الأول - مبنى رقم (987) - كورنيش النيل - مصر القديمة - القاهرة - مصر
Room No. (4) - First Floor - Building No. 987 - Nile Corniche - Mizr El Qadeem - Cairo, Egypt

Patient Name: Doaa Khairi Abdel Haleem Mohamed		Date : 28/06/2025
Exam : ultrasound BREAST (BOTH SIDE)		Age : 48 Year(s)
Medical ID: 27701010127262		Pat. ID: 27596

BILATERAL MAMMOGRAM AND BREAST ULTRASONOGRAPHY REVEALED:

- Breast density: Scattered areas of glandular tissue in both breasts... Matching
- ACR b.
- Multiple small irregular shaped masses are seen in the right upper outer quadrant.
- No detected definite suspicious mass density, or pathological micro-calcification in the left breast.
- Normal skin and nipple on both sides.

By complementary breast ultrasound:

- Homogenous (predominantly glandular) back ground parenchymal echo-texture.
- Multiple irregular shaped masses are seen scattered in the right breast in between 10 o'clock, zone 3 to 12-1 o'clock, zone 2, the largest is seen at 12 o'clock, zone 2 measuring (14 x 11 mm)
- No detected suspicious masses in the left breast.
- Bilateral nonspecific axillary lymph nodes.

CONCLUSION:

- Right breast : Multifocal highly suspicious masses (BI-RADS 4C category).
- Left breast : normal study : (BI-RADS 1 category).

Patient's Name:

Doaa Khairy Abdelhalim Mohammed

Date:

2026-09-09

Referred by:

Prof.Dr. no doctor

Hospital:

Goustave Roussey International Egypt

ABDOMINO-PELVIC ULTRASOUND EXAMINATION REVEALED:

Liver: -

- Average in size (15cm at Rt MCL) bright parenchymal echo pattern with smooth surface.
- No hepatic focal lesions or intra hepatic biliary radicle dilatation.
- Portal vein is patent and not dilated.

Gall Bladder: -

- Average distention and capacity with no stones or mud
- The wall is not thickened.
- CBD is not dilated.

Spleen: -

Average size , homogenous.

• **Kidneys: -**

- Both are average in size, shape and echogenicity
- No stones or dilated pelvicalyceal system
- No gross lesion

Para-aortic and pancreatic area: show no gross abnormalities.

No ascites

Urinary Bladder: -

- Not distended enough however no stones or diverticular out pouching

Uterus and adnexal: no abnormalities could be detected, JUCD is in place

Opinion:

Bright liver likely fatty

Colonic gaseous distention

Hospital: Goustave Roussey International Egypt

Left Digital soft tissue mammography with high resolution sonography revealed:

Clinical summary: Status post right MRM

Findings:

Left breast.

- Scattered fibro-glandular densities. (ACR b)
- No speculations, masses, asymmetry, distortion or suspicious microcalcifications.
- **Ultrasound** demonstrated no solid or cystic lesions.
- Normal skin/nipple/areola complex.
- Non-specific axillary LNs.

Right mastectomy bed.

- Clear mastectomy bed with no masses or fluid collections.
- Clear right axilla. No pathological supra or infra-clavicular lymph nodes.

• **Conclusion:-**

- *Left breast (BIRADS 1): normal study.*
- *Clear right mastectomy bed and axilla.*

• **Recommendation:-**

- *For annual follow up.*
