Registered by : Mrs.Mayada Hegazy

Pathology Report

Clinical Data: Right breast cancer, Post-NACT.
Nature of specimen: Right modified radical mastectomy.

Gross Examination:

- Right modified radical mastectomy specimen measured 24x20x5 cm, with covering skin ellipse measured 20x14 cm. Nipple & areola looked unremarkable grossly.
- Serialing showed a tumor bed site measured 10x7x3 cm, located 2 cm away from the deep margin.
- Axillary lymph nodes: Fibrofatty tissue piece measured 8x7x2 cm, entangling 19 lymph nodes, up to 1x0.5x0.5 cm.
- 16 Blocks:
1:10- T.B.S., 11- N&A., 12- Deep margin., 13:16- ALNs.
- Gross was done by; Dr.Heba El-Shafeey.

Microscopic examination:

- Histological type: No residual viable invasive component (Cellularity 0%).
- Ductal carcinoma in situ: Absent.
- Nipple and areola: Free.
- Additional findings: Effect of therapy, multiple intraductal papillomas with microcalcification, duct ectasia, fibrocystic changes & usual duct hyperplasia.
- Deep margin: Free.
- Axillary lymph nodes: Positive viable metastatic deposit in one out of nineteen lymph nodes (1/19) (The nodal mets measuring 0.3cm, with no extra-nodal extension).
- Histologic response to therapy: Pathological near-complete response to therapy.

Diagnosis:

Right breast cancer (Post-NACT), Right modified radical mastectomy:
- No residual viable remnants of the previously diagnosed invasive tumor.

Pathology Report

Clinical Data

Right breast mass

Nature of specimen

Tru cut biosy collected on 15/6/2025

Gross examination

Multiple grey white tissue cores up to 1 cm , totally submitted

IHC technique: Sections prepared from paraffin block for immune-staining using Bench

Mark ULTRA system for ER, PR, HER2, ER clone (1E2), PR clone (SP1), HER-2 clone (4B5), & Ki67 clone (30-9).

Microscopic examination

- * Histological type: Invasive duct carcinoma
- * Grade (differentiation +nuclear pleomorphism+ mitosis): (3+2+2) Grade II
- * DCIS: No
- * Angioinvasion: Couldn't be detected in the received biopsy
- * Perineural invasion: No
- * IPT (Positive control showed appropriate reactivity) :
- * ER: Strong nuclear reaction in 30 % tumor cells (Allred score 6/8)
- * PR: Strong nuclear reaction in 2 % tumor cells (Allred score 5/8)
- * HER2: Strong complete membrane reaction in >10 % of tumor cells (score 3+)
- * Ki 67: 35% nuclear reaction of tumor cells

Diagnosis

Right breast mass, tru cut biopsy:

Pathology Report

Invasive duct carcinoma, Grade II

IPT:

- * ER: Positive (score 6/8).
- * PR: Positive (score 5/8).
- * HER2: Positive (score 3+).
- * Ki67: Positive in 35% of tumor cells.

Women's Health Outreach Program

Contrast Enhanced Digital Mammography

Clinical summary: Right breast IDC grade II, hormonal and Her2 receptor positive.

Technique

MLO and CC views (low energy & recombined post contrast)
Targeted High resolution ultrasound

Detailed Findings:

Density: ACR B

Background Uptake: mild

Right breast

- Low energy (non-contrast images) show: Two UOQ irregular speculated high density mass lesions seen at posterior and anterior thirds with surrounding distortion and segmental suspicious microcalcifications over an area measuring 11.7 x 10.7 x 7 cm.
- Recombined (post contrast) images show:
 - UOQ two heterogeneous mass enhancement seen at posterior and anterior thirds measuring 5.3 x 3.6 cm and 2.3 x 2.5 cm.
 - Intervening non-mass enhancement is noted measuring about 3.4 x 6.8 cm.
 - The overall pathological process measured 12 x 11 x 9 cm seen 1 cm from nipple.
- Ultrasound demonstrated ;
 - Index lesion: 10 o'clock, posterior third, 5.5 mm deep to the skin, irregular speculated malignant mass measuring 6 x 3 cm.
 - Mass A: 11 o'clock, 15 mm from nipple, 6 deep to the skin, irregular speculated malignant mass measuring 1.8 x 1.6 cm.
 - Intervening both masses area of altered parenchyma with microcalcifications and prominent ducts showing soft tissue echogenicity and micro-calcifications within traced till 1 cm from nipple yet clear dilated ducts are seen reaching the nipple.

- Normal skin/subcutaneous tissue and nipple/areolar complex.
- Multiple pathological axillary lymph nodes (more than three) are seen involving levels 1, 2 and 3; the largest measured 28 x 14mm. No supra-clavicular pathological lymph nodes.

Left breast

- Low energy (non-contrast images) show: no masses, asymmetry, distortion or suspicious calcifications.
- Recombined (post contrast) images show: no pathological uptake.
- Ultrasound demonstrated no solid or cystic masses.
- Normal skin/subcutaneous tissue and nipple/areolar complex.
- Non-specific axillary LNs.

Impression:

Right breast (BIRADS 6): UOQ two mass and non-mass enhancement as described with ipsilateral pathological axillary levels 1, 2 and 3 lymph nodes.

Left breast (BIRADS 1): No pathological mass or non-mass enhancement.

Much Obligated,

Dr. Amal Hegazi, M.Sc.

Tc^{99m} MDP SKELETAL SCINTIGRAPHY

History:

- A 42-year-old lady, with history of right breast cancer, referred for metastatic work up.

Technique:

- Anterior and posterior whole body scans were acquired 2 hours post injection of the tracer.

Findings:

- No abnormal active or cold focal bony lesions could be seen over the surveyed skeleton to account for metastatic bone disease.
- Degenerative changes are seen at the spine and big joints.

Impression:

- The skeleton is scintigraphically free from metastases.

*Much obliged
Dr. Alaa Nagi, MD
Consultant of nuclear medicine*
